Executive Summary

The United States (US) Army Corps of Engineers (USACE) Baltimore District on behalf of the Army National Guard (ARNG)-Installations & Environment Division (IED), Cleanup Branch contracted AECOM Technical Services, Inc. (AECOM) to perform Preliminary Assessments (PAs) and Visual Site Inspections (VSIs) for Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) Impacted Sites at ARNG Facilities Nationwide. The ARNG is assessing the potential exposure to humans and the effect on the environment related to processes at facilities that used per- and poly-fluoroalkyl substances (PFAS) (a suite of related chemicals), primarily in the form of aqueous film forming foam (AFFF) released during firefighting activities or training, although other PFAS sources are possible.

AECOM completed a PA for PFAS at the California Army National Guard (CAARNG) Joint Forces Training Base Los Alamitos (JFTB LA) in Los Alamitos, California, to assess potential PFAS release areas and exposure pathways to receptors. The performance of this PA included the following tasks:

- Reviewed available administrative record (AR) documents and Environmental Data Resources, Inc. (EDR) report packages to obtain information relevant to potential PFAS releases
- Conducted a 2-day PA site visit on January 24 and 25, 2018
- Interviewed current JFTB LA personnel during the PA site visit including the JFTB LA Environmental Officer/CA ARNG Operational Noise Program Manager and two JFTB LA Fire Department Captains
- Completed VSIs at known or suspected PFAS release locations and documented with photographs
- Identified areas of interest (AOI) and developed a conceptual site model (CSM) to summarize potential Source-Pathway-Receptor linkages of potential PFAS in soil, groundwater, surface water, and sediment for each AOI

Eight AOIs related to PFAS releases were identified at JFTB LA during the PA. The AOIs are shown on **Figure ES-1** and described in the table below. The CSM for the JFTB LA is presented in **Figure ES-2**.

Area of Interest	Name	Used by
AOI 1	Two Old Crash Fire Rescue Training Pits	Navy and CA ARNG
AOI 2	New Crash Fire Rescue Training Pit	CA ARNG
AOI 3	West End of the Flightline Fire Training Area and AFFF Equipment Nozzle Testing Area	CA ARNG, United States Department of Agriculture (USDA) and California Department of Food and Agriculture (CDFA) for Medfly
AOI 4	Hangar 1	CA ARNG - Army Aviation Support Facility

1

Area of Interest	Name	Used by
AOI 5	Building 34 (JFTB Los Alamitos Fire Station)	CA ARNG
AOI 6	AFFF Release in vicinity of Building 80 by JFTB Los Alamitos Fire Department	CA ARNG
AOI 7	Emergency Response by JFTB Los Alamitos Fire Department	Navy and CA ARNG
AOI 8	Western Drainage Ditch	Navy and CA ARNG

Three Crash Fire Rescue (CFR) Training Pits fire training areas (FTAs) where AFFF was released to the environment were identified based on data obtained during the PA. These AOIs (AOI 1 to AOI 3) include:

- Two Old CFR Training Pits FTAs located close together and considered to be a single AOI
- New CFR Training Pit FTA AOI
- West End of the Flightline (WEF) FTA and AFFF Equipment Nozzle Testing AOI

Five non-FTAs where AFFF was released to the environment were identified based on data obtained during the PA. These AOIs (AOI 4 to AOI 8) include:

- Hangar 1, including Washrack AOI
- Building 34 (JFTB Los Alamitos Fire Station) AOI
- AFFF release in vicinity of Building 80 by JFTB Los Alamitos Fire Department AOI
- Emergency Response by the JFTB Los Alamitos Fire Department where AFFF was reported to have been released to the environment
- Western Drainage Ditch (WDD) AOI

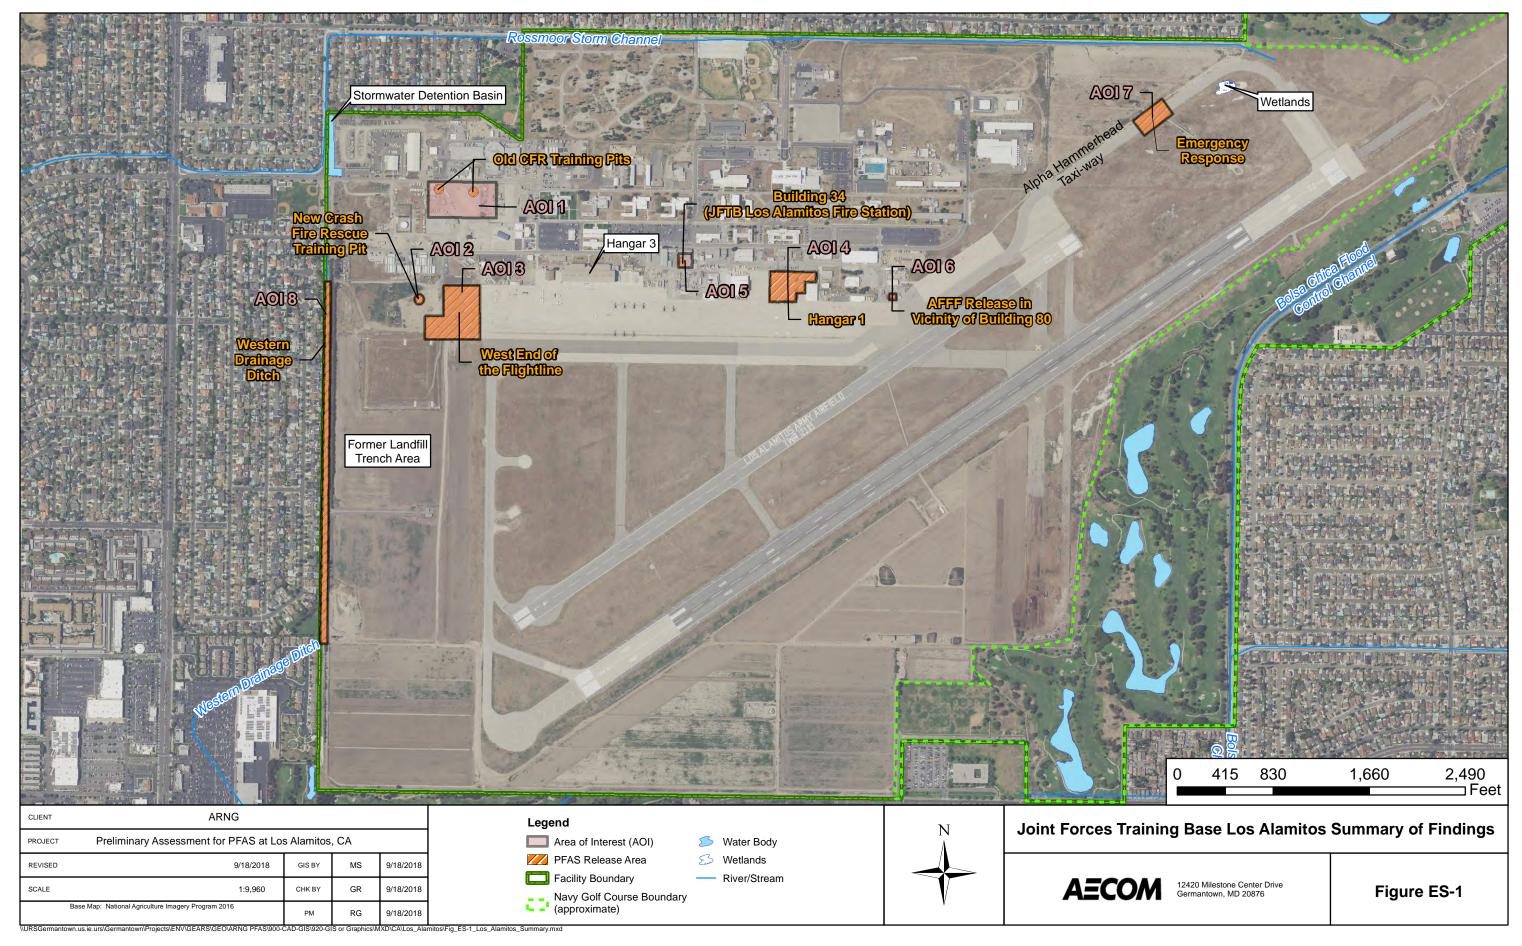

Two other non-FTA areas which are not considered AOIs include:

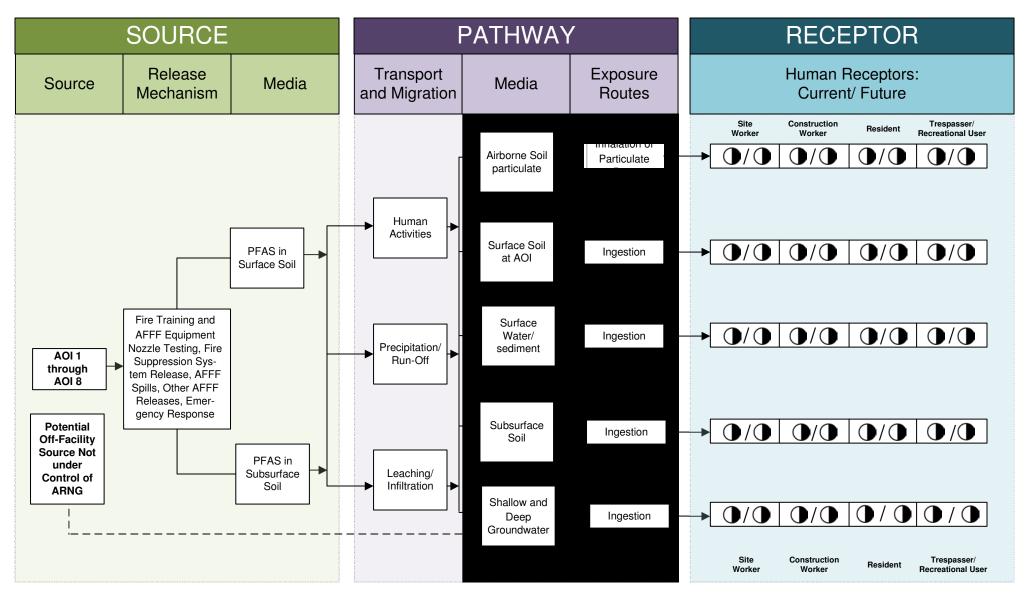

- Hangar 3
- Former Landfill Trench Area

According to data collected between 2013 and 2015, seven water agencies that operate in areas upgradient of JFTB LA had detections of PFOA or PFOS or both compounds. Through review of available documents and databases and based on the various types of chemicals reported to have been released to the environment, one facility located offsite may be a PFAS source area. As such, offsite sources of PFAS in groundwater may have migrated to and beneath JFTB LA.

Based on documented AFFF releases at the eight AOIs identified, there is potential for exposure to PFAS contamination in soil, groundwater, surface water, and sediment for JFTB LA staff and other workers. Receptors are less likely to be exposed to potential PFAS contamination through soil and air; however, some PFAS chemicals are water soluble and can migrate readily from soil to groundwater or surface water via sheet and surface flow run-off and/or leaching. Therefore,

there is a potential for PFAS contamination in soil and sediment to migrate to surface water and groundwater systems.

1. Introduction

1.1 Authority and Purpose

The United States (US) Army Corps of Engineers (USACE) Baltimore District on behalf of the Army National Guard (ARNG)-Installations & Environment Division (IED), Cleanup Branch contracted AECOM Technical Services, Inc. (AECOM) to perform Preliminary Assessments (PAs) and Visual Site Inspections (VSIs) for Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) Impacted Sites at ARNG Facilities Nationwide under Contract Number W912DR-12-D-0014, Task Order W912DR17F0192, issued 11 August 2017, and Modification 01 issued 30 September 2017. The ARNG is assessing potential effects on human health related to processes at their facilities that used per- and poly-fluoroalkyl substances (PFAS) (a suite of related chemicals), primarily releases of aqueous film forming foam (AFFF) although other sources of PFAS are possible. In addition, the ARNG is assessing businesses or operations adjacent to the ARNG facility (not under the control of ARNG) that could potentially be responsible for a PFAS release.

PFAS are classified as emerging environmental contaminants that are garnering increasing regulatory interest due to their potential risks to human health and the environment. The regulatory framework at both federal and state levels continues to evolve. The U.S. Environmental Protection Agency (USEPA) issued Drinking Water Health Advisories for PFOA and PFOS in May 2016, but there are currently no promulgated national standards regulating PFAS in drinking water and the contaminant is an emerging contaminant. In the absence of federal maximum contaminant levels, some states have adopted their own drinking water standards for PFAS. On July 13, 2018, under the authority of the Deputy Director of the Division of Drinking Water, California issued drinking water notification levels (NL) of 14 parts per trillion (ppt) for PFOA and 13 ppt for PFOS. Notification levels are nonregulatory health-based advisory levels established for contaminants in drinking water for which maximum contaminant levels have not been established.

This report presents findings of a Preliminary Assessment (PA) for PFAS at California Army National Guard (CAARNG) Joint Forces Training Base (JFTB) Los Alamitos (LA) in Los Alamitos, California, in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), as amended, the National Oil and Hazardous Substances Pollution Contingency Plan (40 Code of Federal Regulations [CFR] Part 300) and USACE requirements and guidance.

This PA documents the known fire training areas (FTAs) as well as additional locations where PFAS may have been released to the environment at JFTB LA. The term PFAS will be used throughout this report to encompass all PFAS chemicals being evaluated, including PFOS and PFOA, which are key components AFFF.

1.2 Preliminary Assessment Methods

The performance of this PA included the following tasks:

- Reviewed available administrative record (AR) documents and Environmental Data Resources, Inc. (EDR) report packages to obtain information relevant to suspected PFAS releases
- Conducted a 2-day PA site visit on January 24 and 25, 2018

- Interviewed current JFTB LA personnel during the PA site visit including the JFTB LA Environmental Officer and CAARNG Operational Noise Program Manager and two JFTB LA Fire Department Captains
- Completed VSIs at known or suspected PFAS release locations and documented with photographs
- Developed a conceptual site model (CSM) to summarize potential Source-Pathway-Receptor linkages of PFAS in soil, groundwater, surface water, and sediment for each area of interest (AOI) identified

1.3 Report Organization

This report has been prepared in accordance with the USEPA *Guidance for Performing Preliminary Assessments under CERCLA* (USEPA, 1991). The report sections and descriptions of each are:

- **Section 1 Introduction** identifies the project purpose and authority and methods used to complete the PA
- Section 2 Site Description describes the location, description, background and current and future land use of the facility
- **Section 3 Environmental Setting** describes the climate, hydrology, geology and hydrogeology at and surrounding the facility
- **Section 4 Fire Training Areas** describes locations at the facility where AFFF releases related to fire training were documented or otherwise identified
- Section 5 Non-Fire Training Areas describes locations at the facility where AFFF releases not related to fire training were documented or otherwise identified
- Section 6 Adjacent Off-Site Sources describes potential offsite PFAS sources adjacent to the facility that are not under the control of ARNG
- Section 7 Conceptual Site Model describes the Source-Pathway-Receptor linkages of PFAS at each AOI
- Section 8 Conclusions summarizes the findings and presents the conclusions and any uncertainties of the PA
- Section 9 References provides the references used to develop this document

Appendix A – Data Resources

Appendix B – Preliminary Assessment Documentation

Appendix C – Photographic Log

2. Site Description

2.1 Facility Location, Description and Background

The JFTB LA is located in northwestern Orange County, California, within the southeastern corner of the City of Los Alamitos, approximately 20 miles to the southeast of the City of Los Angeles and approximately seven miles north of Seal Beach National Wildlife Refuge and the waters of the Pacific Ocean (**Figure 2-1**).

The JFTB LA is bounded to the north by Farquhar Avenue, residential developments, and commercial-business complexes, to the south by Lampson Avenue, residential developments and the Old Ranch Golf Course, to the east by commercial properties and residential developments; and, to the west by Seal Beach Boulevard, residential developments, a school and a park. The communities of Cypress, Seal Beach, Garden Grove and Rossmoor are situated to the north, south, east and west of the JFTB LA, respectively.

The JFTB LA is largely developed with buildings, roads, and an airfield and occupies approximately 1,319 acres of near-level terrain. The reference point and surface elevation at the geographic center of the airfield is 33° 47' 24" North (N) latitude and 118° 03' 04" West (W) longitude at 21.16 feet (ft) above mean sea level (amsl), respectively.

According to the Los Alamitos Area Chamber of Commerce (LAACOC), the JFTB LA serves multiple tenant entities representing military services, federal, state, municipal, public, private and nonprofit organizations (LAACOC, n.d.). The JFTB LA also has two parks and two special use facilities.

The land area currently occupied by the JFTB LA was used primarily for agricultural purposes in the 1920s and 1930s (PlaceWorks, 2015). In 1941 the Navy purchased the land and by 1942 had constructed a fully operating facility, the Naval Reserve Air Base Los Alamitos. The Base was complete with barracks, a sick bay, and several hangars and functioned during this time as a location for fighter pilot training during World War II. On August 15, 1943, the facility was redesignated as the Naval Air Station (NAS) Los Alamitos and was considered to be one of the Navy's most important U.S. west coast air defense facilities. Approximately 130 buildings, including housing for 2,200 naval personnel was built during the early 1940s. Other structures included hangars, equipment and maintenance shops, a laundry, warehouses, mess halls, headquarter buildings, a gymnasium, chapel, and a small hospital (Marshall and Denger, 2016).

By the end of 1945, NAS Los Alamitos facilities included ordnance storage facilities, a rifle range, motor repair shops, gasoline and oil stations, aviation fuel dispensing facilities, washracks and greaseracks, a laundry, and a fire station. The air station was equipped with both storm and sanitary sewer systems and a wastewater treatment plant that performed secondary water treatment, including a sludge lagoon. A landfill trench area also operated at the facility from the mid-1950s through 1988. During the 1940s, the airfield had a cumulative aviation fuel capacity of 160,000 gallons that was stored in approximately 17 underground storage tanks (USTs) (Marshall and Denger, 2016).

In November 1972, NAS Los Alamitos was re-designated as an Armed Forces Reserve Center (AFRC) and in July 1977 operational control of the AFRC Los Alamitos was officially transferred from the Department of the Navy to the Department of the Army by the House Armed Services Committee. In March 1979, AFRC Los Alamitos was licensed to the State of California by the Department of the Army and the CA ARNG was directed to serve as host of the facility and, as such, was assigned operational control of the installation. In July 2000, AFRC Los Alamitos' status

as a reserve center was changed to Joint Forces Training Base Los Alamitos (Marshall and Denger, 2016).

2.2 Current and Future Land Use

The JFTB LA is an operating flight facility and most areas are not accessible to the general public. Entry into the base requires a valid Common Access Card and nonmilitary visitors must first check in with the base security office at the main gate.

The mission of the JFTB LA is to "operate a military installation and airfield that meets Army standards, and provides support and training facilities for military units and other National, State, and local organizations, to include emergency operations (California Military Department, 2016)." The facility has 160 buildings and encompasses about 1,319 acres of space.

Based on a 25-year development strategy, the JFTB LA Master Plan includes a comprehensive implementation plan to meet developing facility and training program needs in alignment with inevitable mission changes and growth.

3. Environmental Setting

The JFTB LA is situated in Orange County, California, within the southeastern portion of the City of Los Alamitos. The JFTB LA covers about 50 percent of the City's land surface.

The most prominent feature of the JFTB LA is its airfield, which occupies approximately 465 acres and has two runways that are served by a fully staffed Army Air Traffic Control Tower, crash rescue and fire department, jet fuel farm for aviation refueling, and an Army Aviation Weather Office. Airfield operations and support areas encompass approximately 240 acres. Approximately 220 acres are designated as cantonment and include administrative and training facilities, assembly areas, and dining facilities. Approximately 220 acres is recreational/open space used for training activities, athletic fields, a dog park and the Navy Golf Course. The Navy Golf Course has operated and continues to operate under the Navy's purview since its inception. The lands associated with the golf course were permitted to the Navy by the Army for an indefinite period of time. A copy of the permit is included in **Appendix A**. Approximately 190 acres, mostly in the south and southeastern portions of the JFTB LA, is leased to and being managed by Agromin OC. They conduct a soil amendment process in which pre-processed green waste is integrated into the soil in leased land areas to boost nutrient levels.

The surface topography of JFTB LA is generally flat, with an average elevation of 35 ft amsl. The majority of the JFTB LA is developed with buildings, concrete, or asphalt features. There are no naturally occurring surface waterways located on JFTB LA, however, artificially-made channels and a drainage ditch, herein referred to as the Western Drainage Ditch (WDD), exist either within or adjacent to most of the properties boundaries. There are several artificial ponds located within the Navy Golf Course in the southeastern portion of the JFTB LA.

3.1 Climate

The JFTB LA is located in the South Coast Air Basin, within Climate Zone 8, which includes a 6,600 square-mile coastal plain area bounded by the Pacific Ocean on the southwest, and the San Gabriel, San Bernardino, and San Jacinto mountains on the north and east. The South Coast Air Basin includes all of Orange County. Climate Zone 8 is designated as a semi-arid climate with Mediterranean characteristics. Summers are cool, winters mild, and marine- influenced breezes maintain moderate humidity with infrequent rainfall. Air temperature highs in July and lows in January average 78° Fahrenheit (F) and 47°F, respectively.

Rainfall data indicates that the area within which the JFTB LA is located averages approximately 12 inches of rain per year. The rainy season is typically from November through April. Strong, hot winds from the northeast that are referred to as the "Santa Ana" winds are common for short periods of time during the fall and winter months.

3.2 Hydrology

The JFTB LA is within the Westminster watershed, which covers approximately 74 square miles in Orange County. The watershed lies within flat coastal plain and includes a drainage area that is mostly urbanized with residential and commercial development (USACE, 2002). Regional watersheds and surface drainage features that do not originate on the JFTB LA but drain its surface water and waters from the cities of Los Alamitos, Cypress, Stanton, Garden Grove, and other Orange County cities are presented in **Figure 3-1**. Surface water features at the JFTB LA are presented in **Figure 3-2**.

3.2.1 Regional Surface Waters

Three surface water bodies are located in close proximity of the JFTB LA. These include the southwesterly flowing Coyote Creek Channel and the southerly flowing San Gabriel River. The two waterways converge approximately 1½ miles west of the western JFTB LA property boundary. A third natural water body, the Carbon Creek Channel, is located approximately 1 mile north of the northern boundary of the JFTB LA. This westerly flowing channel converges with the Coyote Creek Channel at a point 1 mile north/northeast of the northern perimeter of the JFTB LA. The Coyote and Carbon Creek Channels flow ephemerally throughout the year. The San Gabriel River flows year-round in the lower end (**Figure 3-1**).

Off-facility channels in the vicinity of JFTB LA include:

The Rossmoor Storm Channel

The Rossmoor Storm Channel (RSC) is situated along the northern JFTB LA property boundary. The portion of the RSC that flows from east to west between the intersections of Farquhar Avenue and Lexington Drive and Farquhar Avenue and Bloomfield Street is trapezoidal in shape, with channel slopes and bottom concrete in construction (USACE, 2014). The remaining portion of the RSC that borders the northern JFTB LA property boundary, adjacent to Howard Avenue, is trapezoidal in shape, with channel slopes and bottom earthen in construction. Where the RSC turns south, northwest of the JFTB LA, the channel is trapezoidal with slopes and channel bottom concrete in construction. Water in the RSC eventually flows to the Los Alamitos Retention Basin, followed by the San Gabriel River and Pacific Ocean.

The Bolsa Chica Flood Control Channel

The Bolsa Chica Flood Control Channel is situated along most of the Navy Golf Course's western boundary. This channel, with its principal tributaries including the Anaheim-Barber City Channel and Westminster Channel, drains to Huntington Harbour. The Harbour is approximately 4.5 miles to the south of the JFTB LA. The Channel drains the urbanized commercial, residential and industrial areas in the cities of Anaheim, Stanton, Garden Grove, Westminster, and Seal Beach. The channel and its tributaries vary in construction from earthen and riprap-trapezoidal-channels to vertical walled concrete-lined channels. The portion of the channel that is adjacent to the golf course is trapezoidal with slopes and channel bottom earthen in construction (USACE, 2014)

Regional surface water flow in the Los Alamitos area is to the southwest towards the Alamitos Gap, which is a low-lying area between Long Beach and Seal Beach and contains the San Gabriel River channel. The Alamitos Bay, Huntington Harbour and the Pacific Ocean are the only downstream surface-water bodies in the regional drainage pattern. Alamitos Bay is classified as coastal surface water, which are waters subject to tidal action and waters in the coastal sloughs.

3.2.2 Site Surface Waters

There are no naturally occurring surface water features at the JFTB LA (**Figure 3-2**). Surface water features within JFTB LA boundaries include:

- The WDD, which parallels most of the JFTB LAs western property boundary
- A storm water detention basin located in the northwest corner of the JFTB LA

 Several small artificial ponds associated with the Navy Golf Course, in the eastern portion of the JFTB LA

Additionally, the US Fish and Wildlife Service (USFWS), National Wetlands Inventory, identifies a small freshwater emergent wetland area located in the northeast corner of the airfield, adjacent to the Alpha Hammerhead taxiway (USFWS, 2018).

3.2.2.1 Storm and Sewer Water Infrastructure

The majority of stormwater drains as either overland flow through natural topographic gradients and swales or enters various stormwater drainage catch basins which convey stormwater ultimately to the WDD. A stormwater detention basin is situated in the northwest corner of the Facility. The detention basin only receives stormwater runoff from the Army Reserve facility immediately to the east of the basin. The storm water detention basin area reportedly floods during heavy and prolonged precipitation events. Surface waters temporarily contained in the basin feeds the WDD which flows southerly and leaves the JFTB LA at a point approximately 200 feet north of the facilities southwestern property corner, near Gate 12. The ditch continues southward, crossing under the I-405 Freeway and eventually discharges into the Los Alamitos Retarding Basin followed by the San Gabriel River and the Pacific Ocean.

Surface water in the approximate eastern third of the JFTB LA, including areas occupied by the Navy Golf Course, drain to the Bolsa Chica Channel. The approximate boundary of the Navy Golf Course is shown on **Figure 3-2**.

With exception to surface water entering catch basins associated with the various washrack facilities at the JFTB LA, surface water entering all other catch basins at the facility drain to the WDD. Catch basins associated with facility washracks convey waters to oil water separators prior to sanitary sewer system discharge. These waters are treated by the Orange County Water Districts (OCWD) sanitation plant.

Facility stormwater drainage system plans (as-builts) were not available for review for this PA and as such, further studies will be required to determine the disposition of the stormwater drainage network with respect to potential PFAS within the system.

3.3 Geology

The JFTB LA is situated within the Los Angeles Coastal Plain and Basin in the Peninsular Ranges, a region characterized by northwest trending hills and ranges with intervening valleys. The southern portion of the Plain is an alluvial plain that gently slopes southwest from the Santa Monica Mountains to the San Joaquin Hills.

The JFTB LA is underlain by a northwest-trending syncline that is approximately 20 miles wide and contains up to 2,000 ft of a succession of unconsolidated Quaternary and Tertiary sediments and sedimentary rock. These sediments were deposited in marine, lagoonal, and fluvial environments resting unconformably on Cretaceous and Jurassic granitic and/or metavolcanic basement rocks. The surficial geology beneath the JFTB LA and surrounding area is presented in **Figure 3-3**.

Surface lithology at the JFTB LA comprises Holocene and Upper Pleistocene (Quaternary) alluvial flood plain deposits (Saucedo et al., 2016). These surface deposits are underlain by a succession of Upper Pleistocene, Middle Pleistocene, and Lower Pleistocene sediments, cumulatively up to 2,000 ft thick. Upper Pleistocene sediments include the Lakewood Formation, a bluish-gray silt and fine sandy silt with sand lenses. Middle and Lower Pleistocene sediments include the San

Pedro Formation, which can be further sub-divided into upper, middle, and lower units. Sand and gravel units within the Upper San Pedro Formation are the major water- bearing zones of the middle aquifer system in the Orange County Groundwater Basin (OCB) (California Department of Water Resources [DWR], 2014).

The entire Southern California region is seismically active. Faults in the Orange County-Los Angeles County region that are capable of generating destructive earthquakes and surface rupture in Los Alamitos include the El Modena, Elysian Park, Newport-Inglewood-Rose Canyon, Norwalk, and Whittier-Elsinore fault zones. Located approximately three miles southeast of the JFTB LA, the Newport-Inglewood-Rose Canyon Fault Zone is the closest active fault (Holocene) to the facility. The 11 km long concealed Los Alamitos Fault is located at the southwestern corner of JFTB LA. According to the Southern California Earthquake Data Center (SCEDC, 2013), the most recent surface rupture occurred sometime in the Late Quaternary (between 700,000 years ago and present day). The northwest/southeast oriented fault is characterized as indistinct and may be part of the larger Newport-Inglewood-Rose Canyon fault zone (Figure 3-3).

3.4 Regional Hydrogeology

The JFTB LA is located within the Central Basin of the Los Angeles Coastal Basin, within which is the OCB. In the vicinity of the JFTB LA, the OCB underlies the lower Santa Ana River watershed.

The majority of fresh and easily recoverable water in the OCB resides at a depth of about 2,000 ft in interbedded marine and continental sand, silt and clay deposits situated within a deep structural depression. Upper, middle and lower aquifer systems within the OCB have yields ranging from 500 to 4,500 gallons per minute (DWR, 2014). Recharge to the OCB is from percolation of Santa Ana River flow, infiltration of precipitation, and injection into wells. Groundwater flow within the OCB is generally to the southwest, towards the Pacific Ocean. The OCWD manages groundwater within the OCB.

Excessive groundwater pumping in an area to the southwest of the JFTB LA has caused water levels to drop below sea level inland of the Newport-Inglewood-Rose Canyon fault zone, where a trough-shaped depression allows sea water to migrate inland thereby contaminating the groundwater supply. To protect the OCB from seawater intrusion, a line of wells placed in the Alamitos and Talbert Gaps inject imported and reclaimed water to create a mound of water seaward of the pumping trough (OCWD, 2015b). A portion of the well string related to the Alamitos Barrier project efforts is located approximately 1 ¾ miles southwest of the JFTB LA. According to the OCWD, the principle aquifer groundwater elevations beneath the JFTB LA in 2015 were between -40 and -50 ft amsl (OCWD, 2015a).

3.4.1 Groundwater Use

According to the OCWD (2015b), local water purveyors include the cities of Westminster, Seal Beach, Los Alamitos and Huntington Beach, each of which rely on greater than 70 percent of their total water needs from groundwater production, mostly from wells. **Figure 3-3** depicts the location of off-facility wells in the region.

The EDR Inc. report package reviewed for this PA indicated the presence of the following:

Two Federal USGS-reportable water wells within ¼ to ½ mile and ½ to 1 mile of the JFTB LA
to the west-southwest and west-northwest, respectively

- One Federal-reportable private water supply well within ½ to 1 mile JFTB LA to the eastsoutheast
- Sixteen State-reportable wells located within 1 mile of the JFTB LA, five of which are hydraulically cross- or downgradient to the northwest to southwest of the facility

According to the 2015 Orange County Water District well locations map, the below wells are situated either hydraulically cross- or downgradient and within 1 mile of the JFTB LA (OCWD, 2015a):

- Three active large-system production wells to the southwest (hydraulically downgradient) of the JFTB LA
- Three active large-system production wells to the north-northwest (hydraulically cross gradient) of the JFTB LA
- One active large-system production well to the south (hydraulically cross gradient) of the JFTB LA

Entities that operate large-capacity (i.e. large-system wells) are required to equip their wells with meters and report their production totals every six months, as required by the District Act. Nineteen major groundwater producers within Orange County, including cities, water districts, and private water companies, pump water from about 200 large-capacity wells for retail water use (OCWD, 2015b).

3.5 Site Hydrogeology

Initial groundwater beneath the JFTB LA is in unconsolidated sediments, at depths of less than 20 ft below ground surface (bgs). The second groundwater bearing zone, referred to as Aquifer 1, resides within sediments comprised of silty clay to clayey silt with occasional relatively thin sand lenses (Clayton, 1996a). Groundwater residing in these sediments can be found at depths between 90 and 100 ft bgs. Aquifer 1 is underlain by a silt/clay aquitard that is 20 to 30 ft thick. The aquitard is underlain by Aquifer 2, which holds groundwater in gravelly sands. Groundwater in Aquifer 2 can be found at a depth of approximately 200 ft bgs. Aquifer 2 is underlain by Lakewood Formation clays.

3.5.1 Groundwater Use

Numerous groundwater wells have been installed at the JFTB LA for groundwater gauging and monitoring, groundwater remediation, and potable water and agricultural irrigation water purposes. A discussion of these JFTB LA wells is presented below.

3.5.1.1 Groundwater Monitoring Wells

According to the Spring 2017 JFTB LA groundwater monitoring report, a total of 42 wells are sampled for analytical purposes and 101 wells are gauged in the following JFTB LA areas: former Landfill Trench Area and Waste Consolidation Cell (WCC), former JP-4 Tank Farm (TFA), Fuel Farm Office (FFO), New CFR Training Pit, Buildings 9, 34, 35, 158, 159, and 244; and, Hangars 1 and 2. According to the report, the wells are screened at depths between 4 and 55 ft bgs. Depths to static groundwater, at the time the report was issued, ranged from approximately 4 to 18 ft below top of well casing (Eco & Associates, Inc., 2017).

3.5.1.2 Inactive Potable Water Wells

There are currently three inactive potable wells at the JFTB LA (**Figure 3-3**). A description of the wells is presented below. Photographs of the well heads observed during the PA site visit are presented in **Appendix C**.

ARMD-LA3

Well ARMD-LA3 is approximately 10 ft to the south of Saratoga Avenue, adjacent to an aboveground electrical transformer and about 50 to 125 ft to the northeast of the two Old CFR training pits. The well was installed in 1913 to a depth of 923 ft deep.

The 12-inch diameter well was used for base-wide potable water by the Navy, and subsequently by the CAARNG, until the JFTB LA switched to City domestic water. The well is currently inactive and all pump equipment and piping were removed when the well system was closed down. It was reported that JFTB LA personnel have more recently used the well for reverse osmosis equipment training purposes; however, they have been unable to perform the activity due to a drop in groundwater resulting in pump/draw limitations.

Surface water in the area drains as sheet or overland flow, as no curb and gutter or storm drain infrastructure was observed during the PA site visit. The opening to the well casing is slightly below the ground surface level. The well head lid was recently replaced, prior to which surface water could flow into the well during precipitation events.

Groundwater at the location of the well is reported to flow to the southwest. Hydraulically upgradient of the well is a JFTB LA water pumping station and an equipment maintenance building that is currently occupied by the U.S. Army Reserves, beyond which is a residential community (approximately 600 feet to the north) followed by the Rossmoor Storm Channel (approximately 1,300 feet to the north) of the well. Approximately 1,400 feet southwest (downgradient) is the WDD, a park, and residential community.

ARMD-LA5

Well ARMD-LA5 is in the northern portion of the former JFTB LA Navy Housing area, about 75 ft south of the JFTB LAs northern property boundary. The well was installed in 1963 and is 672 ft deep. The well is not currently used as a potable water source.

Approximately 30 acres in size, the Navy Housing area was used to house Navy staff in several structures that were removed in 2015. The area is currently used for urban training exercises and is accessible with escort only.

Ground cover in the area is relatively flat and with a mix of grass and gravel with animal (ground squirrel) burrows observed throughout the area. The well head was observed to be secured with a steel plate that was recently replaced.

Surface water in the area drains as sheet or overland flow, as no curb and gutter or storm drain infrastructure was noted. A brick wall separates the JFTB LA from a residential community and commercial and industrial properties to the north. The Rossmoor Storm Channel is directly adjacent and north of the wall. Groundwater at the location of the well is reported to flow to the southwest.

ARMD-LARA

The ARMD-LARA well is currently used as a non-potable (gray) water well and is currently listed as inactive. The 6-inch diameter well was installed to a depth of 115 ft bgs in 1944. The well is located to the south of the airfield, approximately 200 ft to the northeast of the GCA Hardstand Building (GCA). At the time of the PA site visit, a piece of plywood was observed to cover the well head opening and the well head was observed to be without pumping equipment.

Surface water in the area drains as sheet or overland flow, as no curb and gutter or storm drain infrastructure was observed during the PA site visit. The top of the well casing is at or below the ground surface level and surface water is reported to enter the well during periods of heavy rainfall.

Groundwater at the location of the well is reported to flow to the southwest. Generally flat and open leased lands, an OCWD water well, and a residential community are approximately ½ mile to the south of the well.

In February 2017, groundwater from the three inactive potable JFTB LA wells was analyzed for PFAS. The results of the PFOA and PFOS analyses are presented below and a tabulated data set that includes the results of all the PFAS compounds analyzed is provided in **Appendix A**.

- Well ARMD-LA3 had PFOA and PFOS in groundwater at concentrations of 87.9 and 230 ng/L, respectively
- Well ARMD-LARA had PFOA and PFOS in groundwater at concentrations of 28.6 and 30.8 ng/L, respectively
- Well ARMD-LA5 had PFOA and PFOS in groundwater at concentrations of 28.0 and 48.7 ng/L, respectively

3.5.1.3 Irrigation and Other Wells and Water Storage Reservoirs

The below section describes other wells and storage reservoirs situated within and associated with JFTB LA. **Figure 3-3** depicts the locations of the wells.

Two potable water wells (BW-1 and BW-2) that were located in the vicinity of Building 9 were active water supply wells until July 1995, at which time the JFTB LA switched to water purchased from the City of Los Alamitos, delivered to the facility by a 16-inch diameter pipe that enters the JFTB LA at the main gate on Lexington Avenue. Installed in 1942, BW-1 and BW-2 reached depths of 715 and 484 ft bgs, respectively. The two former wells are officially abandoned and destroyed/sealed.

Two irrigation supply wells used for agricultural purposes were installed by a farmer who formerly cultivated tomatoes and possibly other food crops in fields in the southern to southeastern portion of the JFTB LA. The first of the two wells was installed in 1975 to a depth of 860 ft bgs. Referred to as the ITO-LA well, the 14-inch diameter well is currently used by Agromin OC as a water supply well for dust control and fire mitigation needs, related to their mulch sorting operations in the southeastern portion of the Airfield. The water from the well is placed into a water truck that is used to spray the water on roads and the mulch pile. The USACE owns the well, but registration is maintained by Agromin, who twice-yearly submits water production reports to the OCWD. A photograph of the well head is provided in **Appendix C**.

In February 2017, groundwater from ITO LA was analyzed for PFAS. Groundwater from well ITO LA had a PFOA concentration of 3.39 ng/L. PFOS was not detected above laboratory reporting

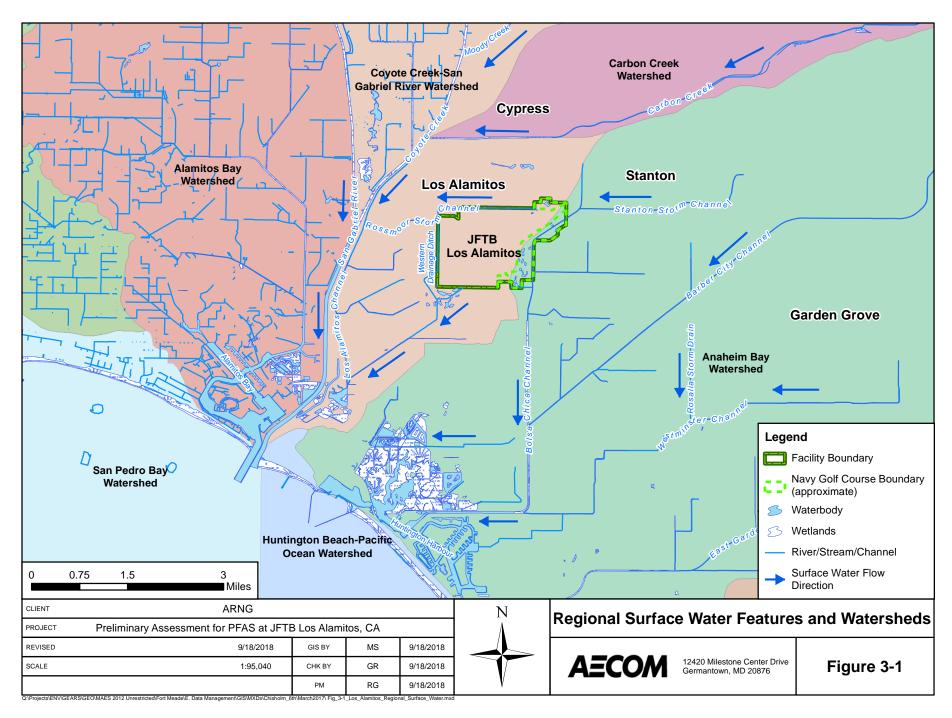

limit for the compound. The results of PFAS compounds analyzed is provided in a tabulated data set, provided in **Appendix A**.

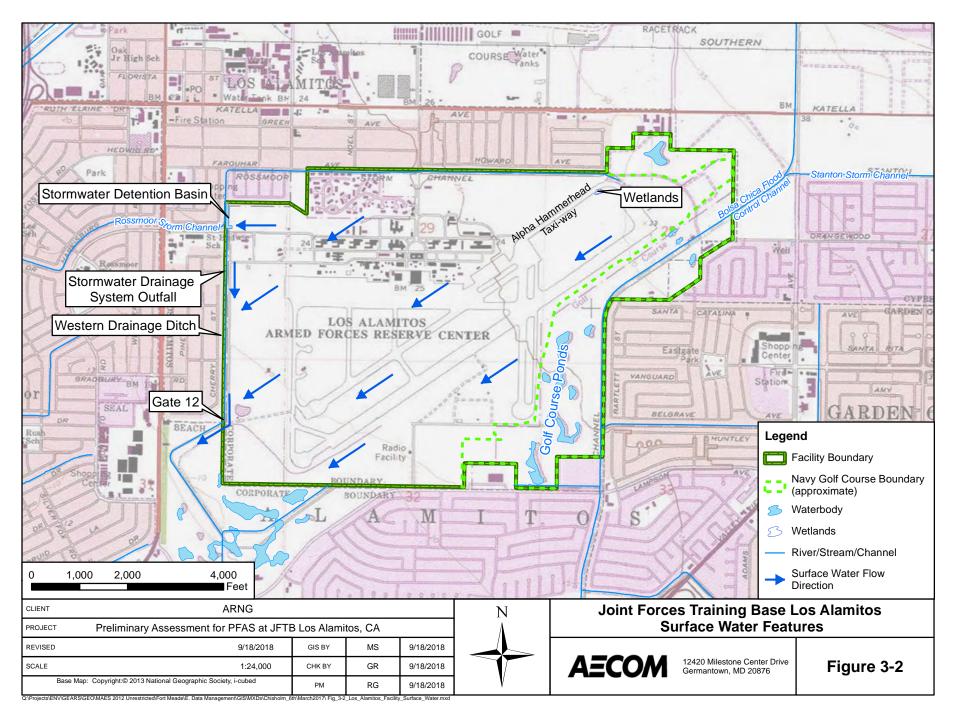

The second irrigation well is situated adjacent to the southern JFTB LA property boundary. The well was installed in 1988 to a depth of 800 ft bgs. The well has not been abandoned but is sanded-in and is not usable as a water supply.

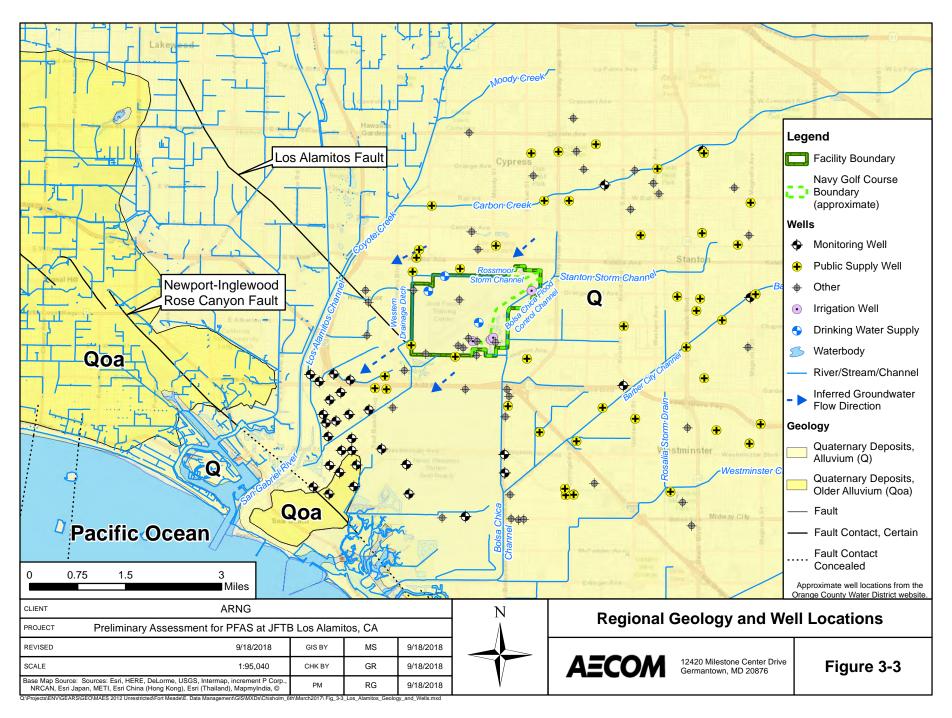

Three wells are associated with the Navy Golf Course situated in the eastern to southeastern part of JFTB LA. According to well records, wells BW-4, -6 and -7 were installed by the Navy between 1958 and 1967. Used for irrigation purposes, wells BW-4, BW-6 and BW-7 reach depths of 836, 546 and 634 ft bgs, respectively.

The OCWD operates a basin monitoring well located near the northwest corner of the JFTB LA, in the vicinity of the detention basin and east of the Army Reserve facility. The OCWD collects a groundwater sample for laboratory analysis from the well annually and gauges water levels every month. The well was installed in 1995 and reaches a depth of 1,664 ft bgs.

There are no active potable water storage reservoirs on the JFTB LA; although two inactive 1-million-gallon ground-level reservoirs exist at Building 411 and 412. The reservoirs were put into standby status in July 1995 (Vernadero Group, 2011).

4. Fire Training Areas

Three FTA AOIs were identified during the PA. These include two Old CFR Training Pits (combined into one AOI); one New CFR Training Pit; and one more recently used West End of the Flightline (WEF) FTA and AFFF equipment nozzle testing area. **Figure 4-1** depicts the location of the FTA AOIs. Photographs of the CFR Training Pits and FTAs are presented in **Appendix C**. A discussion of the three FTA AOIs identified is presented below.

4.1 Old Crash Fire Rescue Training Pits

4.1.1 Description and Operational History

Two Old CFR Training Pits were located in close proximity to each other in the northwest portion of the JFTB LA. One is located south of Building 272, Buildings 275 D through G, and Saratoga Avenue; east of the JFTB LA JP-4 Tank Farm Area, north/northeast of the Fuel Farm Office (FFO) and former "Seabee Compound" areas and Building 74. The other is located west of Building 279 and a parking area (**Figure 4-1**).

The older of the two pits was initially used by the Navy and then by the JFTB LA until approximately 1983. The year in which the Navy constructed and initially began to use this pit is unknown. The pit is located at approximate geographic coordinates 33°47'43.58 N, 118°03'48.53" W.

A second pit was constructed approximately 200 ft to the west of the older pit. The pit was in use from 1977 to 1979. It should be noted that the exact location of this pit is not known. **Figure 4-1** depicts the pits approximate location.

The two Old CFR Training Pits were each reported to be 60 ft in diameter. To allow for liquids to be introduced into the pits without escaping, berms were constructed around the pits to a height of approximately 1 ft. During fire training exercises, the pits were flooded with water and JP-4 fuel or other combustibles were introduced to the ponded waters' surface. The fuels were ignited and then extinguished using AFFF. After the fire was extinguished, the fuel residue was burned off and the remaining liquids were allowed to percolate into the ground, often without additional burning. The pits were unlined. Fuels introduced to the pits were stored in nearby above ground storage tanks (ASTs).

The quantity of fuel used during each fire training session is reported to be between approximately 500 to 1,000 gallons and exercises were conducted six to eight times per week over the period that the pits were used. The amount and percentage of AFFF used is not known.

4.1.2 Current Use, Topography and Surface Features

The surface topography in the vicinity of the two Old CFR Training Pits was observed during the PA VSI to be generally flat. Saratoga Avenue, to the north, is paved with asphalt and is at an equal elevation to surrounding non-paved areas. The roadway is without curb and gutter and no drainage-related infrastructure was noted in the area.

The older of the two CFR Training Pits is bounded by a chain-linked fence, is relatively flat, and covered with gravel and grasses. The area is currently used by the military police as a motor pool storage yard, with access restricted to JFTB LA personnel. The second Old CFR Training Pit area is used to store steel shipping containers. The mixed gravel and grass ground surface is relatively flat, with minor dips and depressions and potholes in some areas.

4.1.3 Previous Investigations and Remediation

Soil and groundwater was investigated for fuel and solvent releases using direct push drilling methods at the two Old CFR Training Pits. It is unclear if the investigations were conducted in the immediate area of where the pits were located. The analyses did not include PFAS and hazardous and petroleum constituents analyzed were detected at concentrations below the constituents respective soil and groundwater standards.

Several remediation systems operated within the vicinity to remediate fuel and solvents in groundwater. Operation of these systems is of interest as they are within close proximity to the Old CFR Training Pits and potentially influenced the migration of PFAS, if present, in the subsurface. Further, a number of in-situ interim remedial actions were also conducted in the vicinity of the pits, including injection of oxygen release compound (ORC) and ozone in the subsurface to enhance aerobic bioremediation efforts. In-situ chemical remediation and ozone addition by means of injection into the subsurface may have expedited the transformation of PFAS pre-cursors into PFOS and PFOA, which have different fate and transport characteristics.

Three remediation systems operated at the Field Artillery Compound (FAC) (formerly the Sea Bee Compound), Fuel Farm Office (FFO) and former JP-4 TFA. In-situ remediation occurred at the former JP-4 TFA and FFO. A description of the remediation systems and injection activities is presented below.

4.1.3.1 Field Artillery Compound (formerly Sea Bee Compound) DPVE

The FAC is situated hydraulically cross-gradient and approximately 600 feet southeast of the two Old CFR Training Pits, at the northwest corner of the intersection of Enterprise Avenue and Essex Road. The compound was used by a U.S. Naval Reserve Construction Battalion Unit until 1994. The facility was used for vehicle and heavy equipment maintenance, hazardous material storage, battery maintenance and storage, and administrative uses where solvents were used and leaked to groundwater (Clayton Group Services, Inc. [Clayton], 2006). A dual-phase vacuum extraction (DPVE) system was installed in October 1998 and operated until April 2000.

4.1.3.2 Fuel Farm Office DPVE

The FFO is located to the south of the FAC and Constitution Road. The various buildings were used for aircraft refueling activities and related administrative purposes between the 1960s and early 2002. A DPVE system began operating in June 2002. Groundwater was extracted using 23 wells screened at either 35 or 55 ft bgs, within Aquifer 1. The northern section of the extraction well network targeted contaminants in the southern section of the FAC (Eco & Associates, 2016). The system was shut-down in July, 2006.

4.1.3.3 Former JP-4 Tank Farm Area DPVE and Interceptor Trench

At a distance of approximately 800 ft to the west/southwest and hydraulically downgradient of the two Old CFR Training Pit FTAs, two groundwater treatment systems operated in the former JP-4 TFA. Located adjacent to the western boundary of the JFTB LA, between Constitution and Saratoga Avenues, the area accommodated three aviation gasoline and jet fuel USTs (totaling 210,000 gallons) and associated product delivery lines, facilities which leaked fuel-related contaminants to the subsurface.

To provide a barrier to offsite contaminant migration, an interceptor/product extraction trench was constructed in November 1995. In addition, a DPVE system that originally used 26 extraction wells and 37 air sparging points was installed in February 1998. The system, which is the only

groundwater treatment system in operation at the JFTB LA, currently uses six wells to extract and treat approximately 8,000 gallons of groundwater per day.

Groundwater from the Old CFR Training Pits may have moved to the JP-4 TFA and been extracted and treated by the JP-4 TFA containment system.

4.1.3.4 JP-4 Fuel Farm Area ORC and Ozone Injection

In April 2006, ORC was injected into the subsurface at 210 direct push boring locations within the JP-4 FFA. The application covered an area of approximately 29,000 sq ft. The ORC was applied within the upper 10 ft of the saturated zone to depths of approximately 7 to 17 ft bgs. A second application occurred in March 2007 at 280 direct push boring locations that covered an area of 31,500 sq ft. The ORC was injected to depths between 8 and 28 ft bgs in areas not previously covered during the initial application. In June 2009, an ozone unit was installed in the northeastern portion of the JP-4 TFA. The air sparge system used 15 ozone gas sparge points. The system operated until September 2011 (Eco & Associates, Inc., 2017).

4.1.3.5 Fuel Farm Office ORC Treatment

Two full scale applications of ORC occurred in August 2006 and March 2008 at the FFO. During each of the two applications, about 8,000 pounds (lbs) of ORC Advanced was applied over depths varying from 16 to 45 feet bgs at 80 locations.

4.1.3.6 Surface Water and Groundwater

Surface water in the area of the Old CFR Training Pits flows as sheet or overland flow or is captured in the JFTB LA stormwater system drainage infrastructure. Surface water in the area ultimately drains to the WDD. Significant volumes of groundwater extracted by each of the remediation systems were passed through granular activated carbon vessels subsequent to which the effluent was ultimately discharged to the WDD in accordance with a National Pollution Discharge Elimination System (NPDES) permit. The NPDES discharge permit was terminated and JFTB LA currently does not have a permit.

From 2011 to the present a no-discharge alternative was initiated and treated water from the former JP-4 TFA DPVE system was used to irrigate poplar trees associated with a phytoremediation barrier located along the JFTB LA's western boundary, adjacent to the WDD. Currently, approximately 8,000 gallons of water per day is extracted from the six operating wells. The water is conveyed to a water truck that is used to spray water in about the southern third of open areas at the JFTB LA, for dust mitigation purposes.

Groundwater beneath the Old CFR Training Pits area is reported to flow in a direction to the southwest. The closest residential structures are approximately 750 ft and 1,250 ft to the north (hydraulically cross gradient) and west (hydraulically down gradient) of the area, respectively.

4.2 New Crash Fire Rescue Training Pit

4.2.1 Description and Operational History

The New CFR Training Pit is located in the western portion of the JFTB LA facility, amongst the couple of remaining JFTB LA revetments (**Figure 4-1**). Photographs of the area are presented in **Appendix C.** The area is accessible to base personnel only.

The New CFR Training Pit area is bounded to the north by the former JP-4 TFA and Medfly Compound, to the west by the WDD and residential development, to the south by the WCC and to the east by the WEF FTA. The geographic coordinates and surface elevation at the approximate center of the New CFR Training Pit are 33°47'34.54" N, 118°03'55.80" W and 20 ft amsl, respectively.

The New CFR Training Pit was used by JFTB LA for training from 1983 until September 1987, at which time outside burning was discontinued by an Air Quality Management District mandate. During these years, training exercises consisted of flooding the pit with water and then introducing JP-4 or other flammable liquids over the surface of the ponded water. The fuel was ignited and the fire was extinguished using AFFF. The percent concentrate of AFFF used during this time is not known. At the conclusion of training sessions and after the fire was extinguished, remaining fuel residue was burned off. Residues that were not burned off were permitted to percolate into the ground (Clayton, 1996a).

Approximately 500 to 1,000 gallons of fuel was introduced into the pit during each training session. Fire training exercises were conducted six and possibly up to eight times per week over the approximate 5-year period the pit was used (Clayton, 2007).

The New CFR Training Pit was approximately 3 to 5 ft deep, 60 ft in diameter, and surrounded by a 1 to 1 ½ foot high earthen berm. The bottom of the pit was constructed with 4 ft of imported sand and gravel placed in alternating layers (Clayton, 1996a). In addition, an underground pipe out-letting at the center of the pit was installed and used to convey fuels to the pit during fire training exercises. A fuel feeder pipe was attached to a 4,000-gallon fuel tanker located approximately 100 ft south of the pit. Revetment 118, situated to the south of the New CFR training pit area, was used to store the fuel tanker that conveyed fuels to the pit (Clayton, 2007).

4.2.2 Current Use, Topography and Surface Features

The surface topography in the vicinity of the New CFR Training Pit is generally flat and covered with weeds and grasses. The area is vacant with exception of two remaining revetment structures, one of which is located to the northeast of the former pit location and the other to the southwest.

4.2.3 Previous Investigations and Remediation

Previous investigations performed in the area of the New CFR Training Pit area have included investigations of soil and groundwater for solvents and petroleum hydrocarbons. Several groundwater wells were installed and soil bores and hydro-punch activities were completed in the area. Additionally, several remediation systems operated within the vicinity to remediate fuel and solvents in groundwater. The operation of these systems is of interest as they are within close proximity to the New CFR Training Pit and potentially influenced the migration of PFAS, if present, in groundwater.

4.2.3.1 Former Landfill Trench Area DPVE System and Well R6-1A

In 1999, an interim remedial action DPVE remediation system was installed to remove and treat volatile organic compounds in the southern portion of the former landfill trench area, south of the New CFR Training Pit and adjacent to a former radar station access road (USACE, 2016). The remediation system was shut down in 2006, based on the anticipated removal of the landfill waste and prior to placement of the landfills waste into a WCC.

In September 2013, Well R6-1A was installed to monitor groundwater conditions associated with the WCC. The well was more recently converted from a monitoring well to an extraction well and

connected to the JP-4 TFA containment system by means of above-ground PVC pipe. The well is currently being used to remove and treat chlorinated solvents that are migrating in groundwater from the New CFR to beneath the WCC. The well, in which groundwater is known to be contaminated with chlorinated solvents, is located approximately 350 feet downgradient of the New CFR Training Pit. As such, PFAS is likely present in groundwater at the well location and is being conveyed to the JP-4 containment system for treatment. Effluent from the system is currently conveyed to a water truck that sprays water in open areas south of the JFTB LA flightline for dust suppression purposes.

4.2.4 Surface Water and Groundwater

Water extracted by the above described systems was directed to the WDD, which is an upper reach tributary to the Tidal Prism of the San Gabriel River. The ditch is approximately 700 feet west of the New CFR Training Pit FTA, immediately west (hydraulically downgradient) of which is a residential community. No other surface drainage features were noted during the PA VSI. Groundwater flow beneath this AOI is to the southwest.

4.3 West End of the Flightline Fire Training Area and AFFF Equipment Nozzle Testing Area

4.3.1 Description and Operational History

The WEF FTA is located at the northwest edge of the paved runway area, south of Enterprise Avenue near Nosedock 61 and east of the New CFR Training Pit FTA (**Figure 4-1**). The approximated geographic location and surface elevation of the WEF FTA are 33°47'33.85" N, 118°03'49.33" W and 19 ft amsl, respectively. The area is accessible to base personnel only.

4.3.2 Previous and Current Use, Topography and Surface Features

From the mid-1960s to early 1970 the WEF FTA was used for the staging of fuel bladders. Aircraft maintenance and cleaning was also conducted in this area during the 1950s and 1960s. At the time of the PA VSI, several fuel tanker trucks were observed to be parked in the area. A portion of this area is used by Medfly, a program operated jointly by CDFA and the USDA, for aircraft parking purposes.

According to JFTB LA Fire Department (FD) staff interviewed, fire training exercises were conducted in the WEF area within the last 20 years. The training was simulated, where trainees set up a target, such as cardboard, on the concrete portion of the tarmac and sprayed 3% AFFF on the target to learn how to apply the foam. There was no actual fire involved as the Air Quality Management District banned open fires in 1987. The AFFF applied was pushed or sprayed off the concrete with water into the grass and soil covered areas west of the concrete tarmac.

In addition to the fire training activities and according to JFTB FD staff interviewed, AFFF equipment nozzle testing was conducted regularly prior to 2018 on a once monthly basis in the southwest corner of the WEF. In early 2018, all AFFF nozzle testing activities ceased per U.S. Army Office of the Assistant Chief of Staff for Installation Management directive prohibiting non-emergency use of AFFF. During the tests, 3% AFFF was sprayed through equipment nozzles for a period of approximately 10 seconds. The stream of spray was directed to the grassy area west of the WEF's concrete surface, where it ponded in surface depressions and evaporated or percolated into the ground. Equipment nozzle tests were conducted in this area since at least

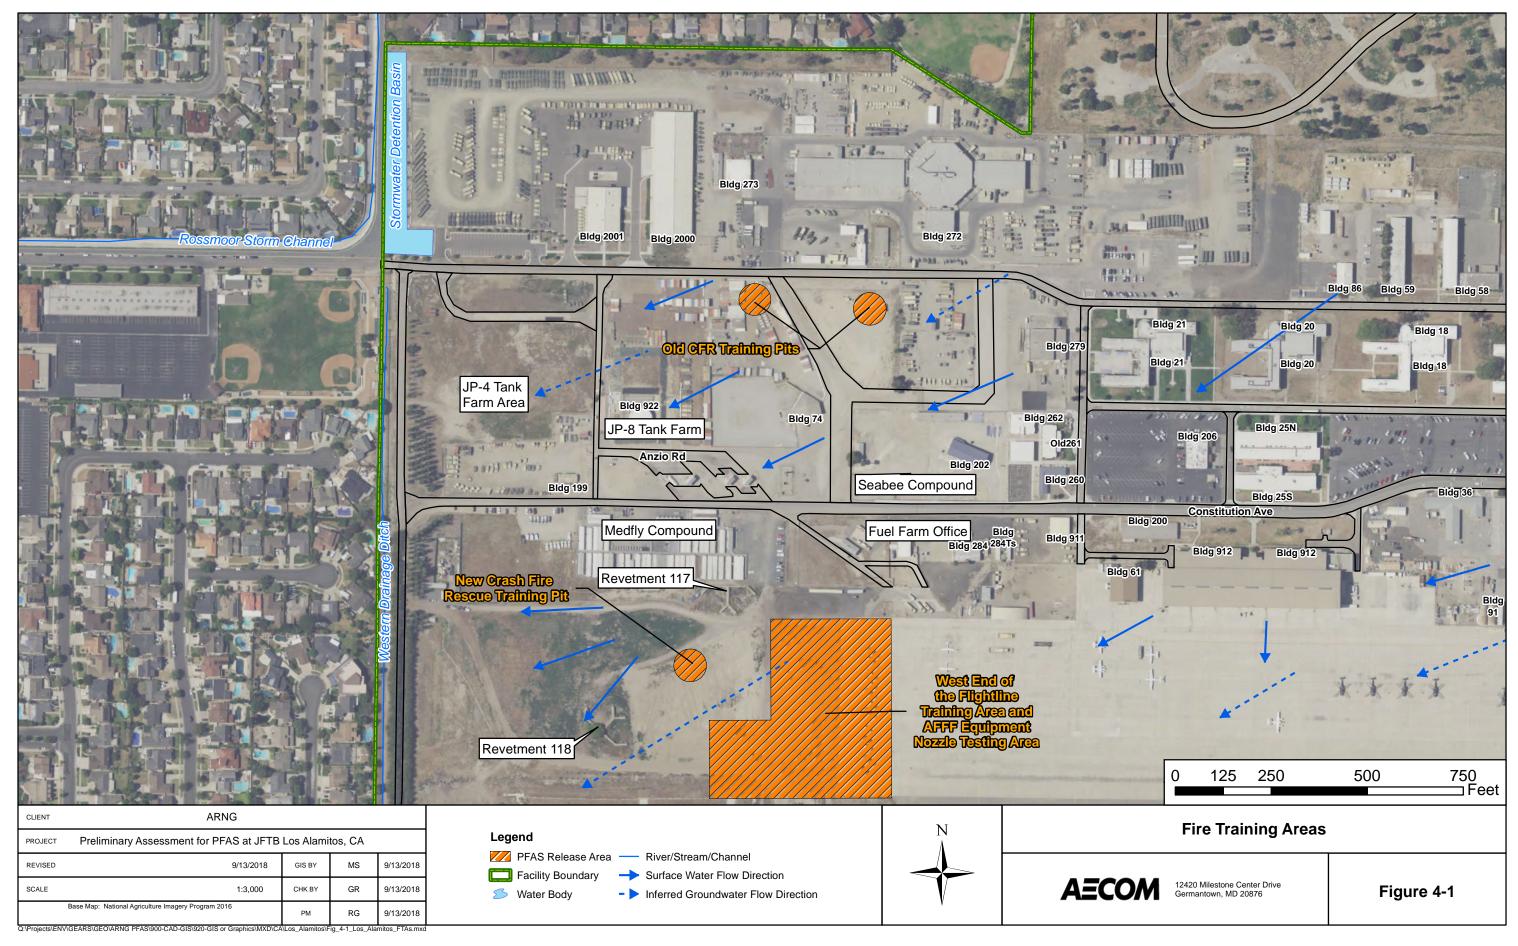

2000, the year of initial employment of the FD staff interviewed. It is not known when the practice of nozzle tests began in this area or if any other equipment testing areas were used at JFTB LA.

4.3.3 Previous Investigations

Soil and groundwater at the WEF was investigated for hazardous and petroleum constituents. Direct-push drilling techniques were used to collect soil and groundwater samples during a remedial investigation of the area. Samples collected at the time were not analyzed for PFAS.

4.3.4 Surface Water and Groundwater

Surface water in the vicinity of the WEF FTA drains to the WDD. The ditch is approximately 1,100 feet to the west of the WEF FTA and nozzle testing area, immediately west (hydraulically downgradient) of which is a residential community. Although not observed during the PA VSI, aerial photographs and documents reviewed indicate the presence of two catch basin storm drains at the southwestern portion of the WEFs tarmac. Water entering the catch basins drain to the WDD (Clayton, 1996). Groundwater flow beneath this AOI is to the southwest.

5. Non-Fire Training Areas

Locations that are considered non-FTA AOIs include but are not limited to, hangars, fire stations, emergency response, and other locations where AFFF was released or had potential to be released to the environment.

Five areas where AFFF was documented to have been either intentionally or unintentionally released were identified during the PA. These areas include:

- Hangar 1, including Washrack
- Building 34 (JFTB Los Alamitos Fire Station)
- AFFF release in vicinity of Building 80 by JFTB Los Alamitos Fire Department
- Emergency Response by the JFTB Los Alamitos Fire Department where AFFF was reported to have been released to the environment
- Western Drainage Ditch

One non-FTA where AFFF was released that is not considered an AOI is Hangar 3. A full-foam test was performed in the hangar as part of the buildings fire suppression system initial testing procedure. The 3% AFFF was fully contained and disposed of in accordance with the facilities non-hazardous waste disposal procedures. A former landfill is also a non-FTA feature of interest, however, is not considered an AOI. The landfill trench area was historically situated within the western portion of the facility, in between the flightline and the facility's western property boundary. The landfill was excavated in 2008 and its contents were placed in a lined WCC. No information is available concerning PFAS containing materials being disposed of in the landfill.

The location of the five non-FTAs, Hangar 3 and the former landfill trench area are shown on **Figure 5-1**. Photographs of each non-FTA visited during the PA VSI are presented in **Appendix C** and a description of each AOI is presented below.

5.1 Hangar 1 and Washrack

5.1.1 Description and Operational History

The JFTB LA Hangar 1 is located to the north of the approximate center of the flightline and west of the washrack and Building 914 (**Figure 5-1**). The geographic coordinates and surface elevation at the approximate center of the hangar structure is 33°47'34.54" N, 118°03'55.80" W; and, 20 ft amsl, respectively. The area is accessible only to JFTB LA base personnel.

The JFTB LA Hangar 1 has been in continuous use since 1943 and is used for aircraft maintenance purposes.

On October 8, 2012 the fire suppression system discharged foam when a contractor pressurized the system for testing purposes during final project inspection. Approximately 100 gallons of 3% AFFF was reported to have been released into the hangar during the event. The approximate extent of area affected was reported to be a 50 ft by 100 ft area.

Based on interviews conducted during the PA site visit and a hazardous materials/waste incident report (included in **Appendix A**), the release was from only one of the six overhead agitators associated with the automatic fire suppression system. Located in the northeast corner of the

hangar, the agitator released foam onto a helicopter that was being serviced. After the release, the helicopter was pushed out of the hangar and into the washrack area where it was hosed off with water. AFFF in the hangar was squeegeed out of the west side of the hangar and the foam was pushed out to the concrete driveway area between the hangar and washrack. The incident report noted that the JFTB Los Alamitos FD responded and contained the spill with absorbent materials to protect the storm drain and wash rack drop inlets. Two nearby catch basins, one located in the driveway area between the hangar and the washrack and the other in the center (floor) of the washrack structure, were observed during the PA site visit. The report indicated that liquids and used absorbent materials were place into 50-gallon drums, which were taken to the facility's hazardous materials storage area. The final disposition of the drums is not known.

5.1.2 Current Use, Topography and Surface Features

The JFTB LA Hangar 1 is currently used for helicopter maintenance by the Army Aviation Support Facility (AASF). The washrack structure to the west of the hangar is used by JFTB LA hangar staff and others for cleaning aircraft and various other motorized equipment.

During the PA site visit, an AST containing 3% AFFF was observed outdoors, in the northeast corner of the hangar. The AST is supported by steel cradles that are bolted to a raised concrete pad. As such, the AST is not in contact with the ground surface and was observed to be in good condition. The AST was observed to be aluminum in construction, with an estimated 750-gallon capacity. Pipes associated with the AST pass through the hangars outside wall and connect to a hydraulically operated automatic fire suppression system located in the main hangar area. According to a manufacturer's tag that was affixed to the system, the two zone system was installed in November 2010 by Cosco Fire Protection. The designed density and area of discharge is 0.20 gallons per minute per square foot (gpm/sqft) and 5,000 sqft respectively. The design sprinkler water flow rate and foam flow rate is approximately 1,300 gpm and 1,400 gpm, respectively. A total of six bell-shaped agitators were observed hanging from the ceiling of the structure.

The hangar is surrounded by generally flat driveway surfaces concrete in construction. The floor of the hangar was observed during the PA site visit to consist of a level concrete slab with a painted surface and coated with an epoxy-type material. A washrack that shares a driveway area with the hangar is located to the east. The washrack has a canopy style roof and is open on all sides. The floor of the wash rack is concrete and generally flat with exception of areas slightly pitched towards the wash rack floor drains.

According to the JFTB LA environmental manager, the hangar's fire suppression system is currently inoperable due to service contracting issues, although the system was reported to be fully charged with 3% AFFF.

5.1.3 Surface Water and Groundwater

No drainage features were observed within the interior footprint of the hangar during the PA VSI. One catch basin was observed in the floor of washrack. Surface water entering this catch basin is conveyed to an oil/water separator that connects to the sanitary sewage system. The water is treated off-site at the Orange County Water Districts sanitation plant. The OWS is regularly emptied by outside contractors hired to dispose of the waste at an off-site facility that accepts non-hazardous wastes.

A second catch basin was observed during the PA site visit in the open drive-way area between the hangar and washrack. Water mixed with the 3% AFFF that was flushed out of Hangar 1 and

not captured by containment boom would have entered this storm drain catch basin and been conveyed through the JFTB LA stormwater drainage system, which ultimately outfalls at the WDD. Cracks in the concrete observed during the PA VSI around the catch basins may be conduits for PFAS migration into the subsurface (see photographs in **Appendix C**).

Groundwater flow beneath the hangar and washrack area is to the southwest.

5.2 Building 34 (JFTB Los Alamitos Fire Station)

5.2.1 Description and Operational History

The JFTB LA Building 34 (Fire Station) is located south of Constitution Avenue, east of Building 35 (**Figure 5-1**). The geographic coordinates and surface elevation at the approximate center of the building are 33°47'34.54" N, 118°03'55.80" W and 20 ft amsl, respectively.

The JFTB Los Alamitos FD is a single station department and currently operates with 17 career personnel and as many as 30 reserve firefighters. The FD provides fire prevention and protection services and performs visual inspections and tests of fire protection equipment and systems at the JFTB LA. The department has a mutually cooperative agreement with the Orange County Fire Authority to provide emergency assistance, as-needed.

The FD's primary purpose is aircraft rescue firefighting but fulfills structural suppression and emergency medical response as well. Fire department duties also include fire prevention/life safety code enforcement and fire education to the JFTB LA and surrounding community.

5.2.2 Current Use, Topography and Surface Features

The FD operates and maintains four firefighting trucks, three of which are specially equipped tactical firefighting trucks (TFFTs) that are capable of carrying either Class A or Class B firefighting agents. One truck is a structure truck that does not carry foam. The TFFTs are equipped with nozzles capable of expelling AFFF. The trucks are filled with 3% AFFF in a concrete driveway area on the west side of the building. AFFF is stored in the southwestern portion of Building 34, adjacent to the driveway area where the trucks are filled. During the PA site visit, the AFFF storage area was observed to contain various brands of AFFF in approximately 48 55-gallon plastic drums and 38 5-gallon plastic containers. About half of the 55-gallon drums observed were National Foam; Aer-O-Water 3%, made by 3EM. The other half was Ansulite 3% manufactured by Ansul. The 5-gallon plastic containers all contained AFFF manufactured by Chemguard 3%. The package dates printed on the side of the drums were between January 2002 and April 2004 and all of the containers were situated atop secondary containment devices. The FD staff interviewed reported that AFFF is ordered through a vendor by the JFTB LA Department of Logistics. Material Safety Data and product information sheets for the types and brands of AFFF used and stored by the FD are presented in **Appendix A**.

Based on interviews conducted with FD staff during the PA site visit, 3% AFFF is occasionally spilled and leaks have and do occur in the driveway area where the TFFTs are filled; these were reported to be occasional and on the order of a few drops to a few gallons.

5.2.3 Previous Investigations

Numerous soil and groundwater investigations have been conducted at and in the vicinity of Building 34, mostly related to UST petroleum releases. A DPVE system to treat diesel fuel and gasoline was in operation at the building from September 2006 through March 2007. Groundwater

extracted by the system was placed temporarily into a Baker Tank. Water from the tank was then routinely transported to the JP-4 TFA containment system by a vac truck, where it was treated and discharged to the WDD. Following the shutdown of the Building 34 DPVE system, a total of 5,650 lbs of ORC was injected into the subsurface to enhance aerobic bioremediation efforts. Additionally, in 1997 a DPVE system was installed at Building 35 to treat chlorinated solvents. The system was upgraded in 2012 to include three additional extraction wells. The system is approximately 200 ft west and downgradient of Building 34.

The operation of these two DPVE systems is of interest in that groundwater extracted by the systems potentially influenced the migration of PFAS, if present, in groundwater. Groundwater extracted was treated and effluent subsequently directed to the WDD.

5.2.4 Surface Water and Groundwater

Incidental spills and releases of 3% AFFF to concrete surfaces where the TFFT's are filled are washed with a water hose to a catch basin situated in the driveway area (**Figure 5-1**). The catch basin conveys water through the JFTB LA stormwater drainage network to an outfall structure at the WDD. Locally, surface water in the area of the fire station flows to the southeast and groundwater flow beneath Building 34 is to the southwest. Cracks in the concrete observed during the PA VSI around the catch basin may be conduits for PFAS migration into the subsurface (see photographs in **Appendix C**).

5.3 AFFF Release in vicinity of Building 80

According to JFTB LA FD staff, 3% AFFF was on one occasion used for insect abatement purposes. Approximately 70 to 80 gallons of 3% AFFF was expelled from a TFFT into an abandoned structure that had become infested with bees and wasps. The nozzle of the TFFT was pushed through the door of the structure and the entire structure was filled with foam. The structure was subsequently demolished and removed at an unknown time. The structure, which was approximately 10 feet by 10 feet in dimension, was located approximately 50 ft to the south of existing Building 80 (**Figure 5-1**). No further details were recalled by individuals interviewed regarding the release and the area was not observed during the PA site visit.

5.3.1 Surface Water and Groundwater

The area surrounding Building 80 is paved with concrete. Surface water likely flows to the west/southwest to paved concrete areas of the tarmac. Groundwater beneath the AOI flows to the southwest. The GCA hardstand building and inactive ARMD-LARA well is situated southeast and cross-gradient of the AOI, at a distance of approximately 1,900 ft.

5.4 Emergency Response

According to JFTB LA FD staff, 3% AFFF was on one occasion used when a Lockheed Martin C-130 Hercules tanker version aircraft sustained a wheel-brake fire during landing. The aircraft taxied to the approximate mid-point of the Alpha Hammer-Head taxiway where the fire was reported to have been extinguished using 3% AFFF. The taxiway is the northern-most airfield runway situated in the northeastern corner of the JFTB LA (**Figure 5-1**). It was estimated by the FD individual interviewed that approximately 70 to 100 gallons of 3% AFFF was used. No further information was available about the fire and no other emergency response incidents were recalled during the staff's tenure at JFTB LA. The area in which AFFF was released was not observed during the PA site visit.

5.4.1 Surface Water and Groundwater

Surface water in the vicinity of the taxiway likely flows towards the southwest, in a direction consistent with the declining surface topography in this direction. The USFWS, National Wetlands Inventory, identifies a small freshwater emergent wetland area located approximately 800 feet to the northeast of the AOI. It is unlikely that surface water in the vicinity of the AFFF release area reaches the wetland area.

Groundwater beneath the runway flows to the southwest. The GCA and inactive potable ARMD-LARA well is situated southwest and downgradient of the AOI, at a distance of approximately 3,700 ft.

5.5 Western Drainage Ditch

The mostly unlined and open WDD parallels most of the JFTB LAs western property boundary. The ditch is situated onsite to a point approximately 200 feet north of the facilities southwestern property corner, near Gate 12 where it leaves the facility in a direction to the southwest, crosses under the I-405 Freeway and discharges into the Los Alamitos Retarding Basin, the San Gabriel River, and eventually the Pacific Ocean. The trapezoidal-shaped ditch is approximately 18 feet wide south of where it passes beneath the intersection of Saratoga and Orangewood Avenues (see **Appendix C** for photograph). The ditch becomes approximately 40 feet wide at its southern terminus, where an approximate 275 feet long portion of the ditch is concrete lined in the area where it turns and leaves the facility.

Surface water entering storm drains at the flight line, main roadways and other areas within the operational cantonment areas of the JFTB LA flows to an outfall structure located in the WDD, south of the JP-4 containment system. Surface water entering all other catch basins at the facility, with exception to water entering catch basins associated with the various washrack facilities, drain to the WDD. In addition, a majority of surface water runoff from the cantonment areas of the facility and from areas generally in the western third of the facility, likely flows to and is captured by the WDD. Significant volumes of groundwater extracted historically by various remediation systems were passed through granular activated carbon vessels subsequent to which the effluent was ultimately discharged to the WDD in accordance with a National Pollution Discharge Elimination System (NPDES) permit. The facility currently does not hold this permit.

The WDD is considered an AOI as surface water and sediment potentially impacted from various AFFF release sites including the New CFR training Pit, WEF FTA and AFFF equipment nozzle testing area; and, the Old CFR Training Pits may have migrated to the WDD. Further, water in the WDD may be marginally influent to the shallow groundwater zone during the rainy season, based on the channels elevation with respect to groundwater gauging data obtained historically from wells in the vicinity (Clayton, 1993).

5.6 Hangar 3

5.6.1 Description and Operational History

The JFTB LA Hangar 3 is located to the south of Constitution Avenue, north of the JFTB LA runways, east of the U.S. Department of Agriculture's Medfly use area and west of an outdoor area used for storage space (**Figure 5-1**). The geographic coordinates and surface elevation at the approximate center of the hangar structure are 33°47'36.92" N, 118°03'36.47" W and 22 ft amsl, respectively. Hangar 3 is accessible only to JFTB LA personnel.

On March 31, 2017, an intentional full-foam test of the Hangar 3 AFFF suppression system was conducted to confirm activation and capacity. During the event approximately 1,400 gallons of water mixed with 3% AFFF was released into the hangar. All of the AFFF released was fully contained within the hangar. After the release, the foam was collected (using a vacuum-truck) and transported by Stericycle Specialty Waste Solutions, Inc., an outside contractor, and disposed of offsite at K-Pure Waterworks, a facility located in Rancho Cucamonga, California, that incinerates waste. A copy of the non-hazardous waste manifest associated with the release is presented in **Appendix A**.

The interior of the hangar was not observed during the PA site visit. The floor of Hangar 3 was reported to be similar in construction to that of Hangar 1, which was observed to be constructed as a concrete slab-on-grade and was painted and sealed with an epoxy-type coating. No drainages, other openings or cracks are reported to exist in the Hangar 3 slab. As the foam was contained after the release and there are no openings in the buildings concrete slab where AFFF may have had a pathway to the subsurface, Hangar 3 is not considered an AOI.

5.6.2 Current Use, Topography and Surface Features

The JFTB LA Hangar 3 is being used by the U.S. Army Reserve Headquarters and Headquarters Company (HHC) The area surrounding Hangar 3 includes a temporary military equipment parking and temporary storage area, a washrack, and hazardous materials/waste storage area.

The fire suppression system in Hangar 3 at the time of the PA site visit was reported to be inoperable. In 2017, a system testing event using water (not foam) was planned but there was an insufficient supply of water to the building and the testing was not performed.

5.6.3 Surface Water and Groundwater

The hangar was observed only briefly from the outside during the PA site visit as accessibility was restricted. The area surrounding the hangar is paved with concrete. Surface water likely flows to the west/southwest to paved concrete areas in the hangars vicinity and tarmac. Groundwater beneath the AOI flows in the southwest direction.

5.7 Former Landfill Trench Area

5.7.1 Description and Operational History

The former landfill trench area was located in the southwest portion of the JFTB LA, adjacent to the JFTB LA's western property boundary. The landfill was bounded by the JFTB LA flightline to the east (beneath the flightpath), the WDD and residential homes of the Rossmoor Highlands community to the west, and a former sludge lagoon and the JFTB LA property boundary to the south. The sludge lagoon was used from 1952 through to the 1960s, predating the use of AFFF and as such is not considered an AOI.

The landfill was generally rectangular in shape and approximately 25 acres in size. The geographic coordinates of the approximate center of the landfill trench area are 40°26'09.5" N, 76°34'27.5" W. Access to the area is restricted to JFTB LA staff.

The landfill trench area was used from approximately the 1950s until 1988, initially by the US Navy followed by JFTB LA. During operation, an estimated 203,000 cubic yards of a variety of municipal solid waste materials was placed into the landfill trench area; the waste was from both onsite and offsite sources (Clayton, 2006a). Landfilling methods included lineal trenching by

means of cut and cover, with trenches reported to be up to 16 ft deep. In 2008, landfill trench area waste was excavated and transferred to the JFTB LA WCC. Located south of the former JP-4 TFA and New CFR Training Pit FTA, the WCC consists of a tiered, encapsulating/lined system in which excavated materials removed from the former landfill were placed.

The two regulatory agencies that have authority and responsibility over the former landfill trench area and WCC include the Regional Water Quality Control Board and CalRecycles. While RWQCB issued a no further action letter, CalRecycles considers the landfill trench area to still be open because their requirements for post-closure confirmation sampling were never met.

5.7.2 Current Use, Topography and Surface Features

The area of the former landfill trench area was observed to be flat and comprised of open, tilled fields. The area is currently being used by Agromin OC for a soil amendment and nutrient program.

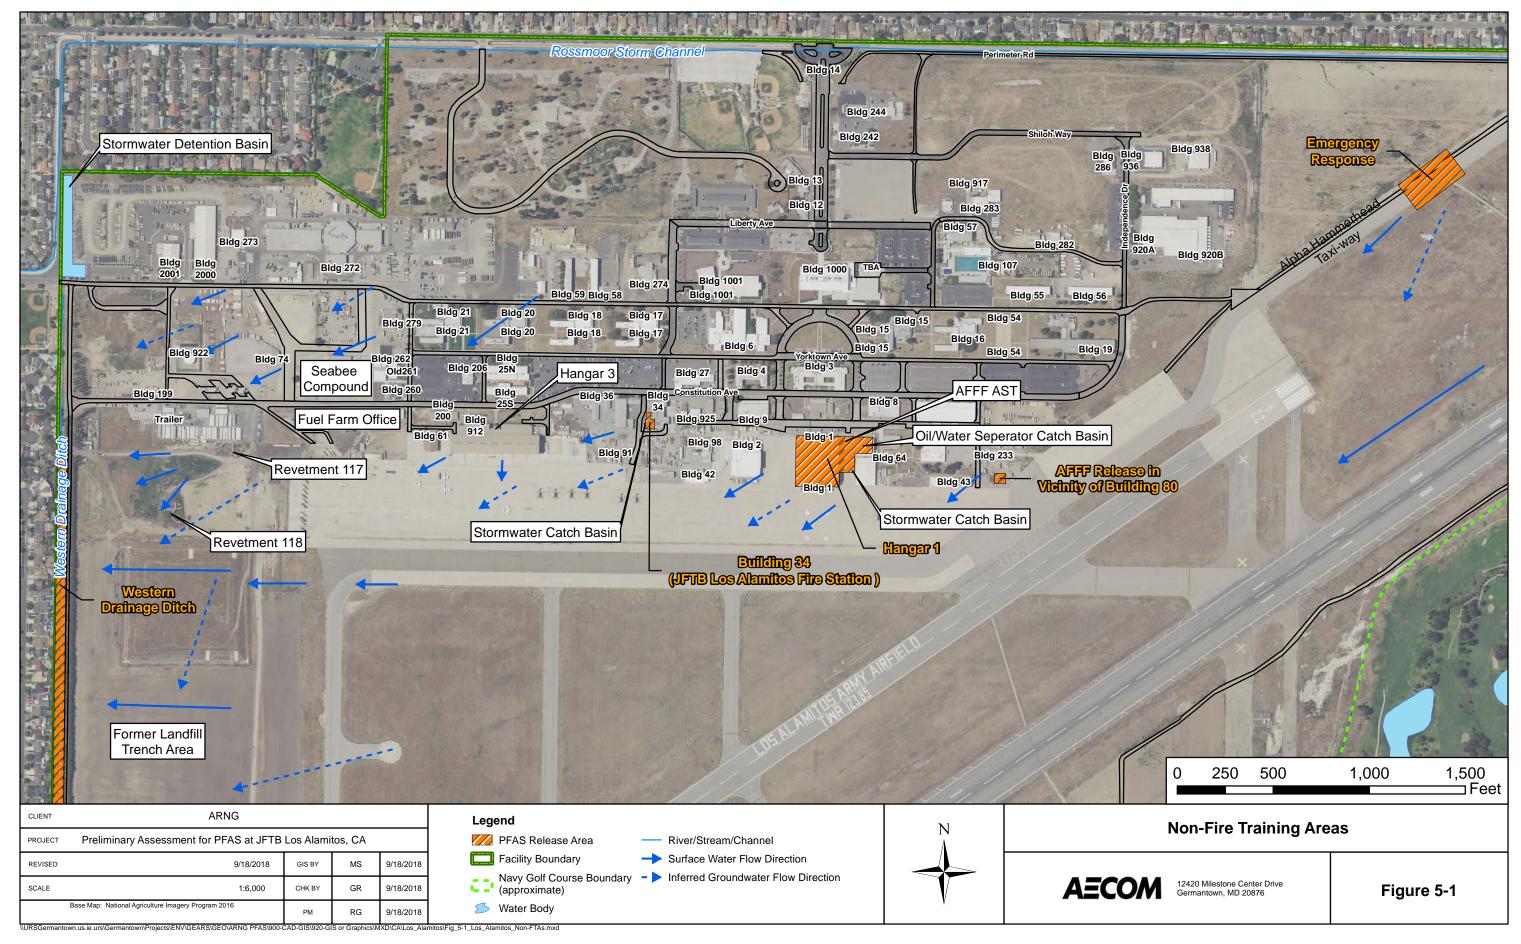

5.7.3 Previous Investigations and Remediation

Numerous investigations, although not for PFAS, have been conducted in the area of the former landfill trench area to characterize soil and groundwater quality and assess aquifer conditions.

Between 1999 and 2006, a DPVE remediation system operated south of the WCC within the former boundaries of the landfill trench area. The operation of the system is of interest in that it potentially influenced the migration of PFAS, if present, in groundwater. The system was installed to remediate fuel and solvents that reportedly leaked to groundwater from the landfill trench area.

5.7.4 Surface Water and Groundwater

Treated water extracted by the DPVE system was discharged to the WDD (Clayton, 2006b). The ditch is directly adjacent to the former landfill's western boundary, immediately west and hydraulically downgradient of a residential community. Groundwater beneath the AOI reportedly flows generally to the southeast; however, during periods of recharge the flow shifts to a more easterly direction and during extended dry periods shifts in a southerly direction (Brunsing Associates Inc., 1999).

6. Adjacent Off-Site Sources

The EPA collects occurrence data for potential contaminants that may be present in drinking water, but do not have enforceable drinking water standards under its Unregulated Contaminant Monitoring program. EPA recently implemented its third Unregulated Contaminant Monitoring Rule (UCMR3), which included testing for PFOA and PFOS. From 2013 through 2015, OCWD performed UCMR3 testing for Orange County groundwater retail agencies (producers). OCWD collected and analyzed samples for PFOA and PFOS from 135 locations within its service area. **Appendix A** includes the UCMR3 2013 to 2015 PFOA/PFOS data set.

According to the UCMR3 data collected between 2013 and 2015, seven water agencies in OCWD's service area had detections of PFOA or PFOS or both compounds. These included Golden State Water Company (Norwalk), Park Water Company (Bellflower/Norwalk), City of Garden Grove, City of Orange, City of Fullerton, City of Anaheim and City of Downey Water Department. Each of these water purveyors and areas in which they operate deep drinking water wells are situated hydraulically cross or upgradient of JFTB LA, within a 10-mile radius.

In February 2017, groundwater from the ARMD-LA5 well was analyzed for PFAS. Based on the results of the UCMR3 data with respect to PFAS contamination in producers drinking water wells, it is possible that Well ARMD-LA5 may be impacted by PFAS that migrated in groundwater from an upgradient source. The well is located in the northern portion of the former JFTB LA Navy Housing area, about 75 ft south of the JFTB LAs northern property boundary. The well is approximately 2,000 feet hydraulically upgradient and to the northeast of the closest reported AAAF release area, the Old CFR Training Pits. The well was installed in 1963, is 672 ft deep and is not currently used as a potable water source. Well ARMD-LA5 had PFOA and PFOS in groundwater at concentrations of 28.0 and 48.7 ng/L, respectively. The results of the PFOA and PFOS analyses conducted at JFTB LA are tabulated and included in **Appendix A**.

According to the EDR report and Department of Toxic Substances Control (DTSC) EnviroStor database (California Environmental Protection Agency, DTSC), there is one property within 1 mile hydraulically up- and cross-gradient of the site, where based on the broad spectrum of materials reported to have been used at the site may be a potential source of PFAS released to the environment.

The site is:

Arrowhead Products/Federal Mogul

This property is located approximately 1,400 ft to the north and hydraulically upgradient of the JFTB LAs northern property boundary at 4411 Katella Avenue, Los Alamitos, CA. According to the DTSC EnviroStor database, the facility manufactures metal products such as flexible and ridged ducting, flex joints and exhaust ducts and non-metal products such as insulation to support metals product and end item composites made from plastic, rubber, fiberglass, resins, and Kevlar. Various reported wastes reported to have been released to the environment, may contain PFAS. The site status is currently listed as active for corrective action, by the DTSC.

7. Conceptual Site Model

The following sections describe the CSM components for the AOIs identified. Releases of PFAS at the JFTB LA have the potential to impact soil, groundwater and surface water and sediments. The eight AOIs are shown on **Figure 7-1**. The CSM for JFTB LA is presented in **Figure 7-2**.

The CSM identifies the three components necessary for a potentially complete exposure pathway: (1) source, (2) pathway, and (3) receptor. If any of these elements are missing, the pathway is considered incomplete. In general, the potential PFAS exposure pathways are ingestion and inhalation of particulates, as PFAS is not volatile. Dermal contact is not considered to be a potential exposure pathway as studies have shown very limited absorption of PFAS through the skin (National Ground Water Association, 2018).

Potential PFAS receptors at the JFTB LA include facility staff, site construction workers, and visitors using the publicly accessible areas of the facility. Off-facility potential PFAS receptors include residents and public recreation area users. The CSMs for each AOI indicate which specific receptors could potentially be exposed to PFAS.

7.1 Source Areas

Each of the below AOIs had documented releases of AFFF to the environment and are therefore considered potential PFAS source areas:

- Old Crash Fire Rescue Training Pits AOI
- New Crash Fire Rescue Training Pit AOI
- WEF FTA and AFFF Equipment Testing Area AOI
- Hangar 1 and Washrack AOI
- Building 34 (Fire Station) AOI
- AFFF Release in vicinity of Building 80 AOI
- Emergency Response AOI
- Western Drainage Ditch

Two areas which are not considered AOIs include:

- Hangar 3
- Former Landfill Trench Area

The Hangar 3 AOI can be eliminated as a PFAS source area due to what can be considered an incomplete Source-Pathway-Receptor linkage. According to interviews and reports, AFFF was released to sealed concrete surfaces and subsequently contained and disposed of at a facility appropriately commissioned to handle the waste. As such, this AOI is excluded from further discussion. The former landfill trench area can also be eliminated as a PFAS source area. During the excavation of the landfill, no industrial or hazardous waste materials were identified and all material removed was determined to be household type wastes only.

According to documents and databases reviewed for this PA, there are several up and cross-gradient drinking water wells operated by various purveyors with PFAS in groundwater. Additionally, one property within 1 mile that is hydraulically upgradient of JFTB LA was reported

to use a broad spectrum of materials that may have PFAS. As such, PFAS in groundwater from offsite sources may have migrated to and beneath JFTB LA.

7.2 Pathways and Receptors

The following presents an evaluation of pathways and potential receptors respective of each possible PFAS source area identified during the PA.

7.2.1 Soil and Sediment

Soil testing for PFAS has not been conducted at the JFTB LA, however, based on data obtained during the PA, the below areas may have PFAS in soil:

- Old Crash Fire Rescue Training Pits AOI
- New Crash Fire Rescue Training Pit AOI
- WEF FTA and AFFF Equipment Nozzle Testing Area AOI
- AFFF Release in vicinity of Building 80 AOI
- Emergency Response AOI

AFFF releases to soil occurred at the above locations. Further, deep groundwater at JFTB LA is currently used for dust and fire control purposes, which could adversely impact soil quality at the surface if the water contains PFAS. Some of these locations are partially vegetated precluding fugitive dust emissions; however, ground-disturbing activities could result in site and construction worker exposure to potential PFAS contamination via inhalation of dust or ingestion of soil.

Not enough information is available to understand the disposition of potential PFAS in soil at the following AOIs; these AOIs are where AFFF was released to mostly concrete surfaces:

- Hangar 1 AOI
- Building 34 (Fire Station) AOI

Cracks in the concrete observed during the PA VSI around catch basins located in driveway areas in the vicinity of Hangar 1 and Building 34 may be conduits for PFAS migration to soil.

Based on information obtained during the PA, PFAS could potentially be present in sediment conveyed in surface water laden with sediment and through and including the JFTB LA stormwater drainage network to the WDD. Therefore, potentially complete exposure pathways for sediment via ground-disturbing activities could result in site and construction worker exposure to potential PFAS contamination via inhalation of dust particulates or ingestion of soil.

7.2.2 Surface Water

In their anionic forms, PFAS are water soluble and can migrate readily from soil to groundwater or surface water via leaching and run-off. Surface water from precipitation will partly evaporate and infiltrate in areas with permeable surface soils. Precipitation on paved surfaces will generally flow overland or be collected by the facility's storm and sewer drain infrastructure, where it exists, and ultimately discharged to the WDD situated along most of the JFTB LA western property boundary.

Testing of surface water for PFAS has not been conducted at the JFTB LA. Based on data obtained for this PA, PFAS could be present in:

 The open and mostly unlined WDD, where surface water flows southerly and leaves the JFTB LA approximately 200 feet north of the JFTB LA's southwest property corner, near Gate 12

Various remediation systems operated at the JFTB LA during the timeframe AFFF was used. The significant volume of groundwater extracted from these systems, after treatment, was conveyed mostly to the WDD. As such, and from a historical perspective, these waters can be considered as having added additional surface water (and sediment loads) to the JFTB LA stormwater drainage system network and off-facility surface water bodies.

Potentially complete exposure pathways for surface water via ingestion exist for site and construction workers in the portion of the WDD that flows onsite and for nearby residents and recreational users of the offsite portion of the WDD along the length of its flow-path.

7.2.3 Groundwater

The primary exposure pathway for PFAS from groundwater would be through ingestion of drinking water. PFAS compounds are mobile in soil and leach into groundwater where they are highly soluble.

In February 2017, groundwater from three inactive potable JFTB LA wells was analyzed for PFAS. The results of the analyses indicated that three onsite potentially potable but inactive wells (ARMD-LA3, ARMD-LA5, ARMD-LARA) and one irrigation well (ITO LA) had PFAS detections in groundwater.

Potable water at the JFTB LA is supplied to the facility by the Southern California Water Company. The distribution system includes a main line that enters the JFTB LA from Winner's Circle Court. Provided the wells are not used as a drinking water source, the Source-Pathway-Receptor linkages for ingestion are considered incomplete.

Based on information obtained for this PA, no other wells at the JFTB LA have been tested for PFAS; therefore it is unknown whether PFAS is present in groundwater in other areas at the JFTB LA.

Based on data obtained during the PA, the below AOIs had AFFF releases and may have PFAS in groundwater due, in part, to permeable (soil) groundcover conditions:

- Old Crash Fire Rescue Training Pits AOI
- New Crash Fire Rescue Training Pit AOI
- WEF FTA and AFFF Equipment Nozzle Testing Area AOI
- Emergency Response AOI

Not enough information is available to understand the disposition of potential PFAS in groundwater at the following AOIs; these AOIs are where AFFF was released to areas with mostly concrete surfaces:

- Hangar 1 and Washrack AOI
- Building 34 (Fire Station) AOI

Cracks in the concrete observed during the PA VSI around catch basins located in driveway areas in the vicinity of Hangar 1 and Building 34 may be conduits for PFAS migration to groundwater.

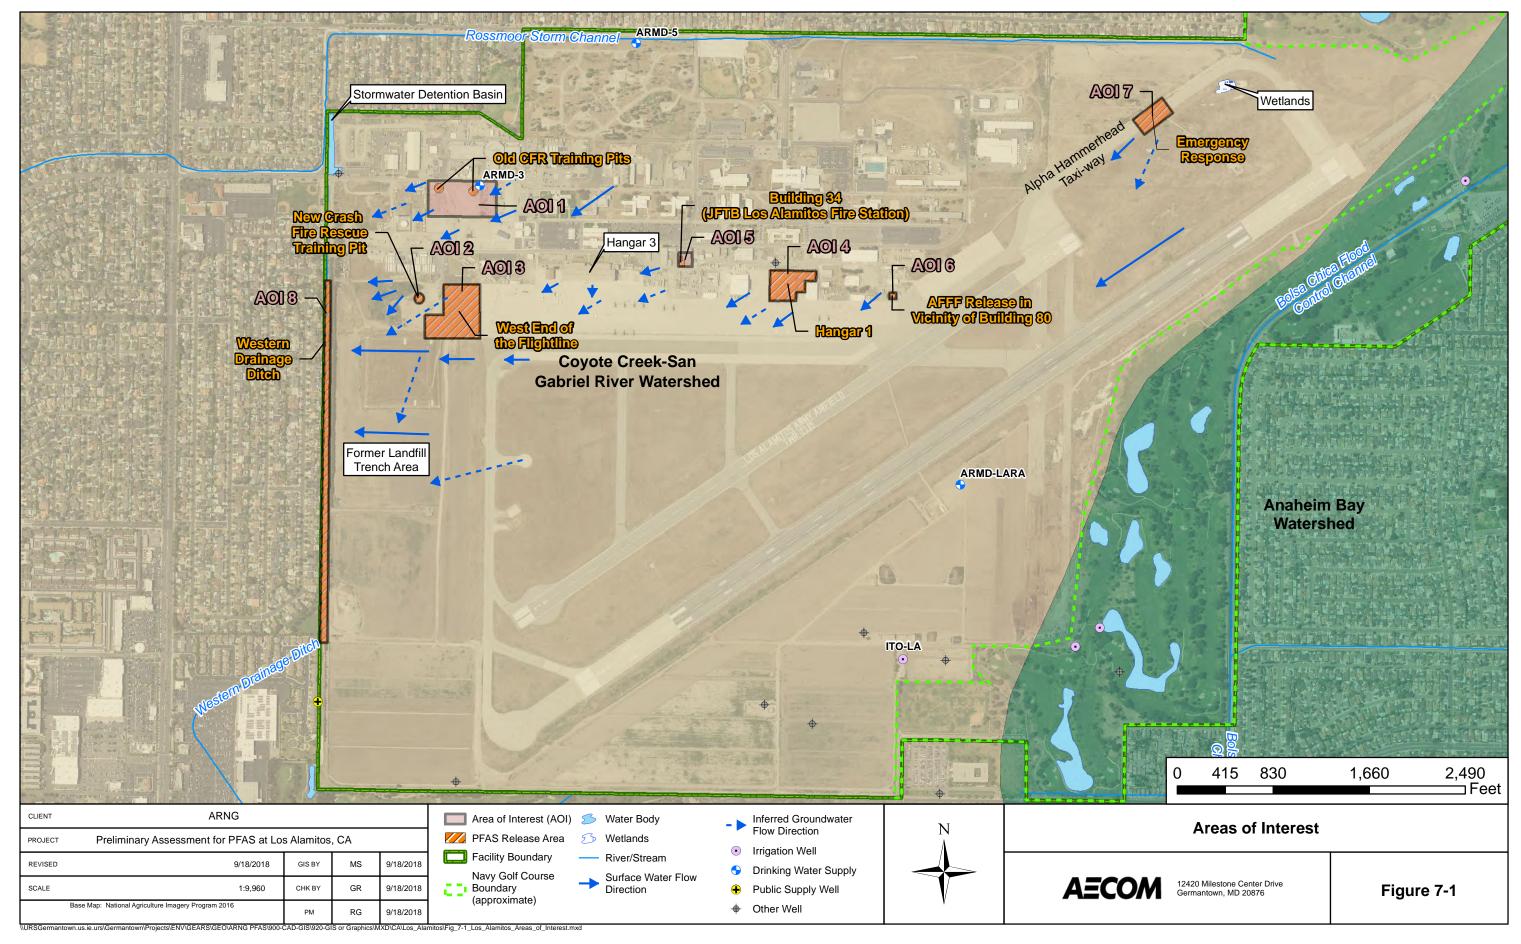

Provided wells in any of the above AOIs are not used as a drinking water source, the Source-Pathway-Receptor linkages for ingestion is considered incomplete.

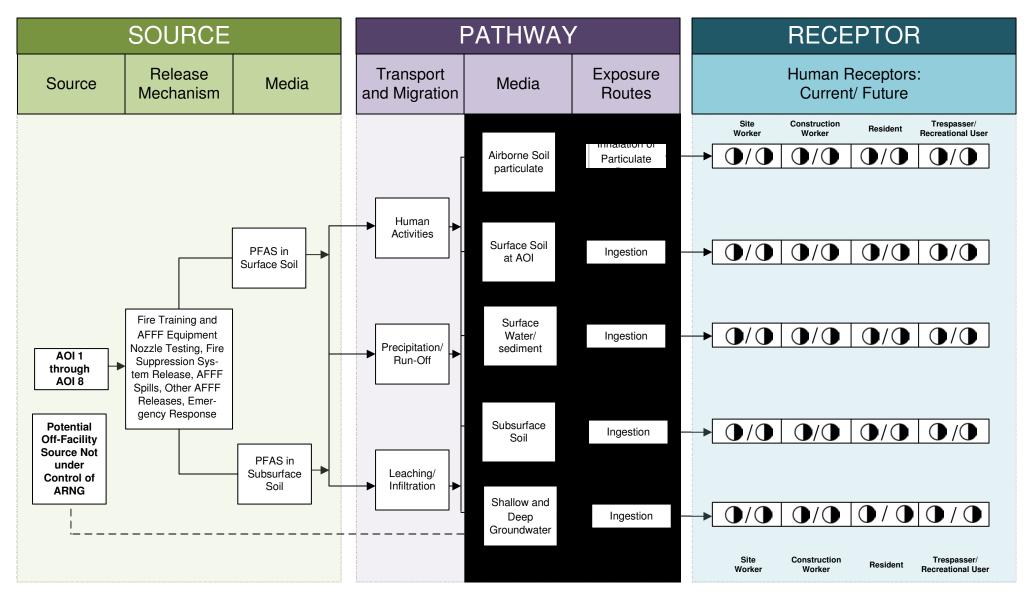

Precipitation entering the shallow groundwater aquifer system may discharge to adjacent surface water bodies and some fraction of infiltrating precipitation may enter a deeper groundwater aquifer system within the OCB. Precipitation which infiltrates and reaches shallow, intermediate and/or deeper groundwater aquifer regimes may bypass streams and be intercepted by wells operated by water purveyors. Therefore, a potentially complete pathway for groundwater via ingestion exists for resident's downgradient of the JFTB LA.

The below practices with respect to groundwater use at the JFTB LA should be noted:

- Use of JP-4 system groundwater effluent for dust suppression purposes may present pathways for dermal exposure and incidental ingestion to site workers
- Groundwater extracted from irrigation well ITO LA that is used for dust suppression purposes may present pathways for dermal exposure and incidental ingestion to site workers
- The sampling of numerous water wells for monitoring purposes may present pathways for dermal exposure and incidental ingestion to site workers

It should also be noted that that various remediation systems operated and extracted groundwater at the JFTB LA during the timeframe AFFF was used, one of which is currently in use. These systems may have depressed groundwater in areas thereby mobilizing potential PFAS in groundwater to areas in a direction contrary to the general groundwater flow. Additionally, chemicals injected into the subsurface may have expedited the transformation of PFAS precursors into PFOS and PFOA, which have different fate and transport characteristics.

8. Conclusions

This report presents a summary of available information gathered during the PA on the use and storage of AFFF and other PFAS-related activities at JFTB LA. The PA findings are based on the information presented in **Appendix A** and **Appendix B**.

Eight AOIs related to PFAS releases were identified at JFTB LA during the PA. The AOIs are shown on **Figure 8-1** and described in the table below.

Area of Interest	Name	Used by			
AOI 1	Two Old Crash Fire Rescue Training Pits	Navy and CA ARNG			
AOI 2	New Crash Fire Rescue Training Pit	CA ARNG			
AOI 3	West End of the Flightline Fire Training Area and AFFF Equipment Nozzle Testing Area	CA ARNG, United States Department of Agriculture (USDA) and California Department of Food and Agriculture (CDFA) for Medfly			
AOI 4	Hangar 1	CA ARNG - Army Aviation Support Facility			
AOI 5	Building 34 (JFTB Los Alamitos Fire Station)	CA ARNG			
AOI 6	AFFF Release in vicinity of Building 80 by JFTB Los Alamitos Fire Department	CA ARNG			
AOI 7	Emergency Response by JFTB Los Alamitos Fire Department	Navy and CA ARNG			
AOI 8	Western Drainage Ditch	Navy and CA ARNG			

Three Crash Fire Rescue (CFR) Training Pits fire training areas (FTAs) where AFFF was released to the environment were identified based on data obtained during the PA. These AOIs include:

- Two Old CFR Training Pits FTAs located close together and considered to be a single AOI
- New CFR Training Pit FTA AOI
- West End of the Flightline (WEF) FTA and AFFF Equipment Nozzle Testing AOI

Five non-FTAs where AFFF was released to the environment were identified based on data obtained during the PA. These AOIs include:

- Hangar 1, including Washrack AOI
- Building 34 (JFTB Los Alamitos Fire Station) AOI
- AFFF release in vicinity of Building 80 by JFTB Los Alamitos Fire Department AOI

- Emergency Response by the JFTB Los Alamitos Fire Department where AFFF was reported to have been released to the environment
- Western Drainage Ditch (WDD) AOI

Two other non-FTA areas which are not considered AOIs include:

- Hangar 3
- Former Landfill Trench Area

No information is available concerning PFAS containing materials being disposed of in the landfill. The landfill was excavated and its contents, comprised of household wastes, were subsequently placed in a lined waste consolidation cell. Additionally, a full-foam test occurred in a facility hangar, Hangar 3, during which AFFF was released into the hangar as part of the buildings fire suppression system testing procedure. The foam was fully contained and disposed of in accordance with the facilities non-hazardous waste disposal procedures.

According to UCMR3 data collected between 2013 and 2015, seven water agencies in OCWD's service area had detections of PFOA or PFOS or both compounds. Areas in which they operate are situated hydraulically cross or upgradient of JFTB LA. There is one property within 1 mile and hydraulically up- or cross-gradient of the JFTB LA where further study may be warranted to determine if there is potential for this site to have released PFAS to the environment. As such, offsite sources of PFAS in groundwater may have migrated to and beneath JFTB LA.

Groundwater remediation treatment systems operated at the facility and in-situ chemical and ozone remediation by means of injection at various areas may have expedited the transformation of PFAS pre-cursors into PFOS and PFOA, which have different fate and transport characteristics.

Based on documented AFFF releases at these AOIs, there is potential for exposure to PFAS contamination in soil, groundwater, surface water, and sediment for site and construction workers, residents using downgradient water supply wells, and recreational users. In addition, residents using groundwater for drinking water surrounding the facility to the northwest to south-southwest may potentially be exposed to migrating PFAS contamination via the groundwater pathway.

8.1 Uncertainties

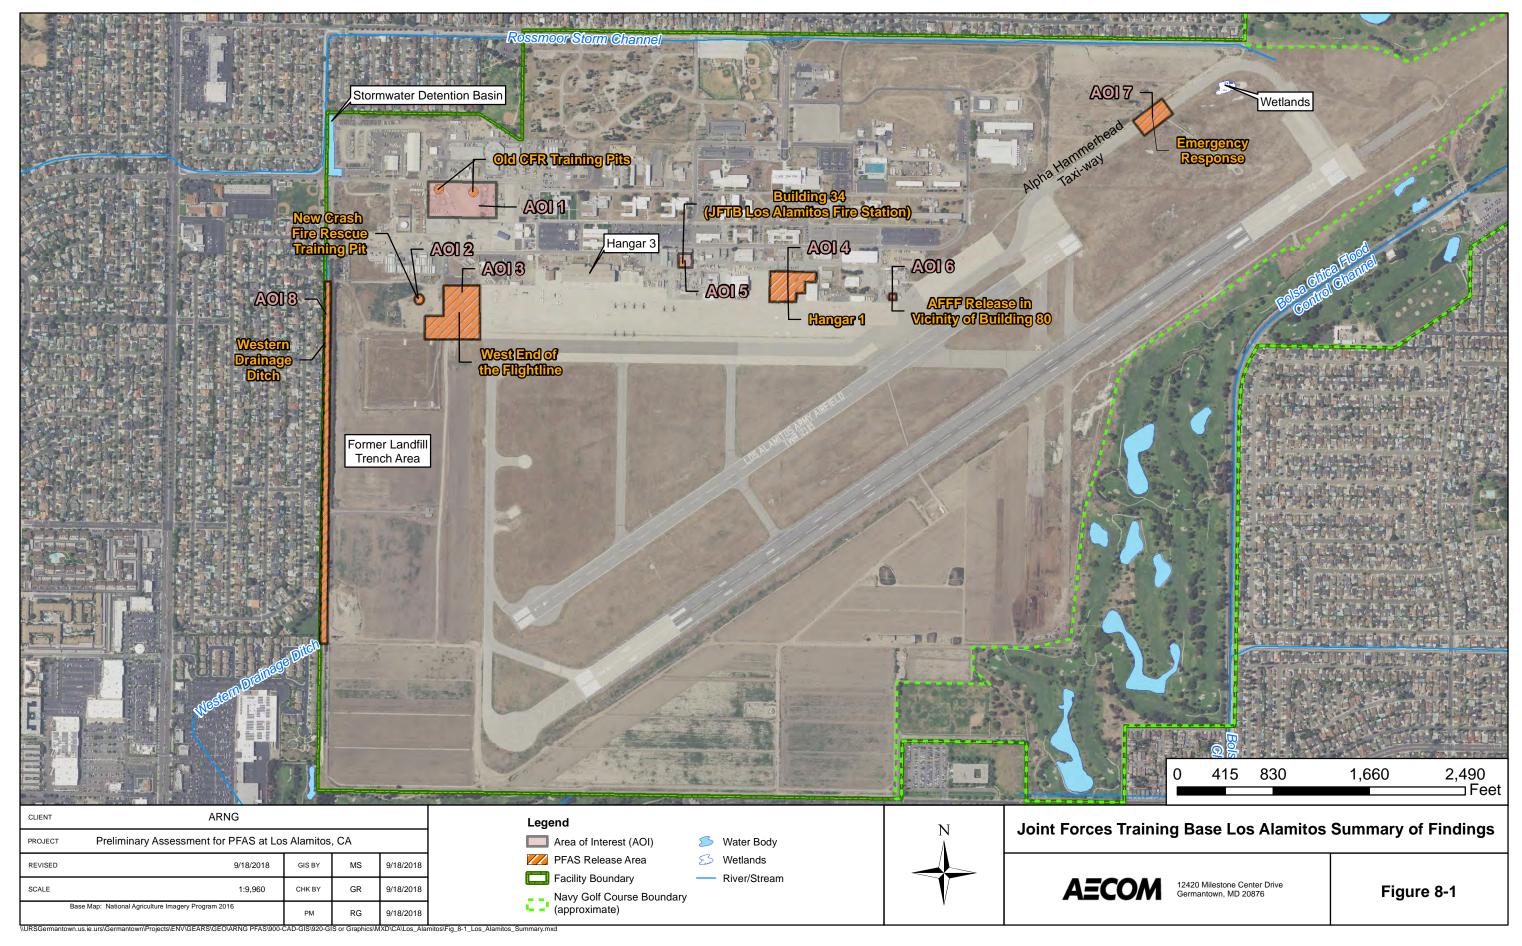

A number of information sources were investigated during this PA to determine the potential for PFAS-containing materials to have been present, used, or released at the facility. Historically, documentation of PFAS use was not required because PFAS were considered benign. Therefore, records were not typically kept by the facility or available during the PA on the use of PFAS in training, firefighting, or other non-traditional activities, or on its disposition.

The conclusions of this PA are predominantly based on the information provided during interviews with personnel who had direct knowledge of PFAS use at the facility. Sometimes the provided information was vague or conflicted with other sources. Gathered information has a degree of uncertainty due to the absence of written documentation, the limited number of personnel with direct knowledge due to staffing changes, the time passed since PFAS was first used (1969 to present), and a reliance on personal recollection. Inaccuracies may arise in potential PFAS release locations, dates of release, volume of releases, and the concentration of AFFF used. There is also a possibility the PA has missed a source of PFAS, as the science of how PFAS may enter the environment continually evolves.

In order to minimize the level of uncertainty, readily available data regarding the use and storage of PFAS were reviewed, current personnel were interviewed, and the majority of potential source areas were visually inspected, as practicable.

The following table summarizes the uncertainties associated with the PA:

Area of Source of Interest Uncertainty	
All AOIs (as applicable)	Facility stormwater drainage system plans (asbuilts) were not available for review for this PA and as such, further studies will be required to determine the potential for PFAS in the system.
AOI 1 Two Old CFR Training Pits FTAs	The older of the two pits was initially used by the Navy and then by the JFTB LA until approximately 1983. The year in which the Navy constructed and initially began to use this pit is unknown. A second pit was constructed approximately 200 ft to the west of the older pit. The pit was in use from 1977 to 1979. The exact location of this pit is not known. The amount and percentage of AFFF used at both pits is not known.
AOI 2 New CFR Training Pit FTA	The percent concentrate of AFFF used during training sessions is not known.
AOI 3 West End of the Flightline FTA and AFFF Equipment Nozzle Testing Area	It is not known when the practice of nozzle tests began in this area or if any other nozzle equipment testing locations were used at JFTB LA.
AOI 4 Hangar 1, including Washrack	A non-hazardous waste report indicated that liquids and used absorbent materials generated subsequent to the Hangar 1 AFFF release were placed into 50-gallon drums, which were taken to the facility's hazardous materials storage area. The final disposition of the drums is not known.
AOI 5 Building 34 (JFTB Los Alamitos Fire Station)	The amount of 3% AFFF leaked or incidentally spilled is not known.
AOI 7 Emergency Response by JFTB Los Alamitos Fire Department	The precise location of where the firefighting activity occurred is not known.
AOI 8 Western Drainage Ditch	Details regarding the JFTB LA stormwater drainage system is not known and further inquiry and study is required

DEPARTMENT OF THE ARMY LICENSE FOR NATIONAL GUARD PURPOSES

ARMED FORCES RESERVE CENTER, LOS ALAMITOS ORANGE COUNTY, CALIFORNIA

NO. DACA09-3-78-47 -

The SECRETARY OF THE ARMY hereby grants to the STATE OF CALIFORNIA for use by the STATE MILITARY DEPARTMENT OF CALIFORNIA, hereinafter referred to as the licensee, being the appropriate department of the State of California with authority to execute this license on behalf of the State of California, a license for an indefinite term commencing on 13 August 1977, but revocable at will by the Secretary of the Army, to manage, operate, use and occupy for year-round maintenance and training as an Armed Forces Reserve Center and support of the California Army National Guard, and designated active Army, Navy and Air Force units and reserve component units of the Army Navy, Air Force and Marines, certain land and improvements comprising the Armed Forces Reserve Center, Los Alamitos, Orange County, California, located substantially as shown in red on Exhibit "A" attached hereto and made a part hereof, and more particularly described as follows:

Consisting of buildings and surrounding grounds, containing approximately 1502.53 acres, with condition of buildings and installed property being described in the Inventory and Condition Report, marked Exhibit "B", attached hereto and made a part hereof. The Golf Course (shown in green) and Family Quarters "A" and "B" (shown in blue) on Exhibit "A" attached hereto, are included in this license for accountability purposes only.

THIS LICENSE is granted subject to the following provisions and conditions:

- 1. That the management, operation, use and occupancy of said Armed Forces Reserve Center by Licensee, shall be performed in accordance with Department of Defense Directives and Department of the Army regulations, subject to provision of adequate funding to the Licensee by the Department of Defense through the National Guard Bureau. Until such funding is received each component occupying facilities on the installation shall bear a fair share of the cost of management and operation, computed as his occupance of space is to the total space available. Building space assignments will be made by the licensee with equitable consideration to Active and Reserve Component missions.
- 2. That the management, operation, use and occupancy of said Armed Forces Reserve Center shall be with the general supervision of the duly authorized representative of the Secretary of the Army.
- 3. That the Licensee shall maintain and keep in good repair and condition at standards prescribed by Department of the Army regulations, the premises on said Armed Forces Reserve Center, and all costs of operation, maintenance, and

ARMED FORCES RESERVE CENTER, LOS ALAMITOS ORANGE COUNTY, CALIFORNIA No. DACA09-3-78-47

restoration occasioned by reason of the use of the premises shall be paid for from funds available to Licensee from funds appropriated by the National Guard Bureau, and no funds from the State of California shall be utilized for said operations, maintenance and restoration, except for those buildings and facilities occupied for use as armories, Army aviation support facilities, and organizational maintenance shops as described in National Guard Bureau Pamphlet 420-10, and as modified by National Guard Bureau letter dated 10 March 1977, subject: Federal Support of Licensed Armories.

- 4. That the United States (hereinafter referred to as the Government), reserves the right to use the property included in this license, or any part thereof, including all buildings and improvements situated thereon, for such purposes as the Department of the Army deems necessary in the interest of national defense.
- 5. That the Government will not be responsible for any injury to persons or damage to property arising out of or incident to the use or occupancy of the licensed property by the licensee, and the licensee shall indemnify and save the Government harmless from any and all claims for such injury or damage, excepting claims for injury or damage arising from activities of the Government on the said property which are being conducted for the benefit of the Government. Nothing contained in this condition shall be construed to be in derogation of the rights and remedies afforded aggrieved parties by Federal or State statute. It is understood that the obligations imposed on the licensee by this condition are limited to those not prohibited from being assumed by the laws of the State of California.
- 6. That no addition to or alteration or improvement of the premises shall be made without prior written authorization from the Secretary of the Army or his duly authorized representative. All additions, alterations and improvements so authorized shall be maintained by the licensee. Permanent additions, alterations and improvements (which shall be so designated by the Secretary of the Army or his duly authorized representative) shall, upon completion, become and remain the property of the Government.
- 7. That the facilities included in this license shall not be used for the quartering of personnel except when such personnel are in the Federal service, participating in authorized training, or for the temporary or interim quarterings of personnel.
- 8. That as of the date of commencement of this license a joint survey and inventory of the property included thereunder, indicating the exact condition thereof, shall be made by the Los Angeles District Engineer and the licensee. A written report of said survey and inventory, signed by an authorized representative of the Los Angeles District Engineer and licensee, shall be attached hereto as Exhibit "B" and made a part hereof. A like survey and report shall be made upon expiration or termination of this license.

ARMED FORCES RESERVE CENTER, LOS ALAMITOS ORANGE COUNTY, CALIFORNIA No. DACAO9-3-78-47

- 9. That this license may be relinquished by licensee upon giving sixty (60) days notice in writing to the Los Angeles District Engineer.
- 10. That on or_before the date of expiration of this license or its relinquishment by the licensee, the licensee shall vacate the premises, remove all property of the licensee therefrom (excluding those permanent additions, alterations and improvements which under the provisions of Condition No. 6 hereof have become the property of the Government), and restore the premises to as good condition as that existing upon the date of commencement of the term of this license, damages beyond the control of the licensee, and due to fair wear and tear excepted. If, however, this license is revoked, the licensee shall vacate the premises, remove said property therefrom, and restore the premises as aforesaid within such time as the Secretary of the Army may designate. In either event, if the licensee shall fail or neglect to remove said property and so restore the premises, then at the option of the Secretary of the Army said property shall either become the property of the Government without compensation therefor, or the Secretary of the Army may cause the property to be removed and the premises to be so restored at the expense of the licensee, and no claim for damages against the Government or its officers or agents shall be created by or made on account of such removal and restoration.
- 11. That the licensee may mutually agree with Department of Defense elements for the use of premises on said Armed Forces Reserve Center by such elements for joint or individual training purposes, provided use of such premises are subject to designation by licensee and provided such uses do not interfere with licensee use.
- 12. That the licensee may, upon appropriate authority, issue temporary short term licenses to community service activities subject to the same terms and conditions permitted to Active Army installation commanders; provided such use is at no expense to the Federal Government.
- 13. That this license is subject to all existing easements and licenses and leases of said Armed Forces Reserve Center of record as set forth on Exhibit "C", attached hereto, and the Government reserves the right to a grant to others leases, licenses, and easements in such manner as not to interfere with the exercise of this license and in coordination with the licensee.
- 14. That the Secretary of the Army shall, by separate action, relinquish such jurisdiction as he deems advisable over the Armed Forces Reserve Center, Los Alamitos, California, subject to coordination with the licensee.

ARMED FORCES RESERVE CENTER, LOS ALAMITOS ORANGE COUNTY, CALIFORNIA No. DACAO9-3-78-47

- 15. That the Government reserves the right at any time for its representatives, which shall include duly authorized representatives of the Los Angeles District Engineer, to enter the licensed premises to review and to inspect the licensed premises, and in the event it is determined that the premises are not, being properly maintained in conformance with the terms of this license, written notice of each deficiency shall be given to the licensee, who shall initiate actions as deemed necessary by the Government to restore the premises to an appropriate condition.
- 16. That any notice under the terms of this license shall be in writing signed by a duly authorized representative of the party giving such notice which, if given to the Government, shall be addressed to the District Engineer, Los Angeles District, U.S. Army Corps of Engineers, P.O. Box 2711, Los Angeles, California 90053; if to the licensee, to the Commander, State Military Forces, Military Department, ATTN: CALG-FA, P.O. Box 214405, Sacramento, California 95821, or as may time to time otherwise be directed by the parties.
- 17. This license may be modified or supplemented during the term hereof upon mutual agreement of the parties in writing.

IN WITNESS WHEREOF, I have hereunto set my hand this 2777 day of MANCH 1976, by direction of the/Secretary of the Army.

PERMIT TO O HER FEDERAL GOVERNMENT L PARTMENT OR AGENCY

TO USE PROPERTY ON

No. DACA09-4-81-87

ARMED FORCES PRSERVE CENTER
LOS ALAMITOS, ORANGE COUNTY, CALLFORNIA.

DEPARTMENT OF THE NAVY, LOS ALANITOS NAVAL GOLF COURSE, LOS Alamitos, CA is hereby pranted a permit for a term of an indefinite period of time

beginning 1 January 1981, 1981, and online

but revocable at will by the Secretary of the Army, 40 upon declaration of a National Emergency and 30 days' notice of termination to the Department of the Navy, for use, operation and maintenance of a golf course for recreational purposes, containing approximately 294.0 acres, including the control of all existing facilities constructed thereon as described on Exhibit B, pages 1 through 4 attached hereto and made a part hereof, the location of the golf course being

as shown substantially in ver on Exhibit A, attached hereto and made a part hereof, and described as followers

UNIT P consisting of 294.0 acres of land, more or less, as shown on Drawing No. 697-X-6.

THIS PERMIT is granted subject to the following conditions:

Department of the Army under the general supervision and subject to the dipproval of the officer having immediate jurisdiction over the premises, and subject also to such rules and regulations as he may from time to time prescribe. said officer being the District Engineer.

he may from time to time prescribe. said officer being the District Engineer, 19053.

LOS Angeles District, Corps of Engineers, PO Box 2711, Los Angeles, CA 90053.

2. That the permittee shall, at its own expense and without cost or expense to the Department of the Army/Maintain and keep in good repair and condition the premises herein authorized to be used.

3. That any interference with or damage to property under control of the Department of the Army incident to the exercise of the privileges herein granted shall be promptly corrected by the permittee to the satisfaction of the said officer.

4. That the permittee shall pay the cost, as determined by the said officer, of producing and officer services furnished by the Department of the Army or through Department of the Army facilities for the use of the permittee.

N6247481RP00A63

5. That no additions to or alterations of the premises shall be made without the prior consent of the said officer.

- 6. That if for any reason it should be deemed necessary or expedient for the Department of the Army to perform functions and/or render services which are the responsibility of the permittee, the said officer may, in lieu of reimbursement, require the permittee to furnish the personnel and/or materials required for the performance of said functions for the rendering of said services. In addition to furnishing personnel and/or materials, the permittee shall reimburse the Department of the Army for any costs incurred by the Department of the Army in connection with said functions and/or services, such as for supervision and/or equipment furnished. Selection of such personnel will be subject to the approval of the said officer.
- 7. That on or before the date of expiration of this permit or its relinquishment by the permittee, the permittee shall vacate the said premises, remove its property therefrom, and restore the premises to a condition satisfactory to the said officer, ordinary wear and tear and damage beyond the control of the permittee excepted. If, however, this permit is revoked, the permittee shall vacate the premises, remove its property therefrom, and restore the premises as aforesaid within such time as the Secretary of the Army may designate.
 - 16. That prior to execution of this permit the following changes were made:

The Granting clause and Condition Nos. 1, 2, 3 and 4 were revised and Condition No. 6 was deleted and Condition Nos. 8 through 16 were added. Condition Nos. 8 through 15 are on page 3.

IN WITNESS WHEREOF I have hereunto set my hand by authority of the Secretary of the Army this

- 8. That the permittee shall be responsible for the maintenance and repair of the perimeter fence comprising the golf course boundary. The permittee shall reimburse the Commander, Armed Forces Reserve Center for the cost of any maintenance and repair performed by the Center.
- 9. That the permittee shall be responsible for the maintenance and repair of the perimeter road within the boundaries of the golf course. The permittee shall reimburse the Commander, Armed Forces Reserve Center for the cost of any maintenance and repair performed by the Center.
- 10. That the permittee shall coordinate with the Commander, Armed Forces Reserve Center and/or his duly authorized representative to determine sharing of costs covering perimeter security patrol, including the requirements relative to Intrusion Detection System, monitoring, responding to alarm and costs of providing vehicles and personnel necessary for patrolling.
- 11. That the permittee shall insure that access to perimeter road is controlled and precludes the possibility of vandalism or security violations to the airfield and/or Installation property.
- 12. That any activities to be conducted on the premises other than those related to the game of golf shall first be coordinated with the Commander, Armed Forces Reserve Center and/or his duly authorized representative to insure no safety hazards or situations involving aircraft operations are created, due to lack of proper planning.
- 13. That the Commander and/or his duly authorized representative, Armed Forces Reserve Center, will coordinate with the permittee's duly authorized representative on any pending activities that may pose a safety hazard to personnel and facilities on and within the boundaries of the golf course.
- 14. That the Commander, Armed Forces Reserve Center, and/or his duly authorized representative shall retain the right for access to the airfield lighting facilities or GCA equipment for the purpose of maintenance located within the boundaries of the golf course premises.
- 15. That the Commander, Armed Forces Reserve Center, and/or his day authorized representative shall retain access to the perimeter road within the boundaries of the golf course as necessary for security or service.
- 16. That the permittee acknowledges that approximately 40.42acres (Parcel 16) Unit F is currently being leased by the Department of the Army and such lease will expire 30 dune 1984.

Armed Forces Reserve Center, Los Alamitos Department of the Navy WA 3/1/8/

· 1000年 · 100

Tong Kay 547-7705

Subj: NOTES OF PHONCON WITH WESTDIVNAVFAC SAN BRUNO, REAL ESTATE DIVISION, MR. PETE MORENO, COMM (415) 244-3817

1. The following are notes from my phoncon this date with Pete Moreno, San Bruno Real Estate Division concerning the relationship of the Navy Golf Course to the CAANG, Armed Forces Reserve Center, Los Alamitos. Per Mr. Moreno:

The entire reservation is Federally owned (US Army)

The property is managed for the US Army by the Army Corps of Engineers, Los Angeles with the "managing officer" being the District Engineer

There are two permitee's operating on the reservation, one being the State of California, the other being the US Navy (Permit No. DACA-4-81-87)

Each of the permitees has a one-to-one ("landlord-tenant") relationship with the District Engineer, Los Angeles District, US Army Corps of Engineers

The Navy permit (Permit No. DACA-4-81-87) was issued on 01 JAN 81 for an indefinite period

Mr. Moreno stated that by analogy, the relationship of the Navy and the AFRC is that of two neighbors in a duplex rental property, each having their own "lease agreement" with the landlord. Mr. Moreno further characterized the conditions of the Navy's Permit as follows:

The operation of the Navy Golf Course should cause **no costs** to be incurred by AFRC

The Navy is responsible for maintaining it's portion of the perimeter fence and the perimeter road

The Navy shares responsibility with AFRC for perimeter security, controlling access, preventing vandalism or other security violations of the airfield and installation property

That the Navy must cooperate at all times with AFRC concerning matters of airfield and aircraft operations safety issues

Constant of Style

That conditions #12 and #13 are "sort of mirror clauses"... " that neither tenant will do anything that could conceivably pose a safety hazard to the other" without prior coordination between both tenants

That conditions #14 and #15 insure that the Navy "grants to" AFRC...access to the golf course premises for the <u>specific</u> purpose of maintaining airfield lights / GCA equipment and access to the perimeter road as necessary for security or service

That condition #16 notifies the Navy that it may loose approx. 40.42 acres of land as of 30 June 1984.

Mr. Moreno reiterated that any issues concerning the golf course would not be addressed through AFRC but would be worked out directly between the Army Corp's of Engineers, Los Angeles and his (Mr. Moreno's) office.

W.D. Olsen

Gordon, John P (NWS N92S)

From:

Moreno, Paul M (NWS N92S) Wednesday, September 18, 2002 2:22 PM Gordon, John P (NWS N92S) GOLF COURSE REAL ESTATE ISSUE

Sent: To:

Subject:

Mr. Gordon, we tracked down the current cognizant real estate office that is holding the golf course use permit. The POC

Ms. Mechelle Williams 619-532-1230. She has reviewed the permit and concurs with the position outlined by Mr. Pete Moreno in 1993.

3. HAZARDS IDENTIFICATION

Routes of entry: Dermal, inhalation and ingestion

Potential Health Effects: May cause skin and eye irritation.

Carcinogenicity: Not a carcinogen.

4. FIRST AID MEASURES

Ingestion: Do not induce vomiting. Call a physician.

Inhalation: Remove to fresh air.

Skin: Rinse with water. Wash with soap and water. Contaminated clothing should be washed

before re-use.

Eyes: Rinse with water. Call a physician.

5. FIRE FIGHTING MEASURES

Flash Point:

Flammable Limits in air (lower % by volume):

Flammable Limits in air (upper % by volume):

Auto-ignition Temperature:

no flash to boiling
not evaluated
not evaluated

General Hazards: None known.

Fire Fighting Equipment: Self contained breathing apparatus

Fire Extinguishing Media: Water, Foam, Carbon Dioxide, Dry Chemical, Halon

Fire and Explosion Hazards: Decomposition products may be toxic.

Hazardous Combustion Products:

6. ACCIDENTAL RELEASE

Contain spills. Vacuum or pump into storage containers, absorb smaller quantities with absorbent materials, and dispose of properly. Washing area with water will create large amounts of foam.

Dispose of released and contained material in accordance with local, state, and federal regulations. Release to local waste treatment plant only with permission.

7. HANDLING AND STORAGE

Store in original container, or appropriate end-use device. Store at temperatures of -2° - 120° F. If the material freezes, it may be thawed without loss of performance.

8. EXPOSURE CONTROLS, PERSONAL PROTECTION

Eye Protection: Wear side-shield safety glasses.

Skin Protection: Wear latex gloves.

Respiratory Protection: Use organic vapor respirator if needed.

9. PHYSICAL AND CHEMICAL PROPERTIES

Boiling Point: 212 degrees F.

Melting Point: -2° F
Specific Gravity: 1.05 g/ml
Vapor Pressure (mm Hg): N/A
pH 7.0 - 8.5

Flash Point (PMCC): no flash to boiling

Vapor Density (air = 1) N/A Solubility in water: 100%

Appearance: opaque, thick liquid
Odor: very slight solvent odor

10. STABILITY AND REACTIVITY

Stability: Stable

Incompatibility: Strong oxidizers

Hazardous Polymerization: Will not occur.

Decomposition Products: Oxides of nitrogen, sulfur, carbon.

11. TOXICOLOGICAL INFORMATION

Eye Irritation: (Rabbits) mild irritant Skin Irritation: (Rabbits) minimal irritant

Inhalation Toxicity: not evaluated Sensitization: not evaluated Teratology: not evaluated Mutagenicity: not evaluated Reproduction: not evaluated Acute Oral Effects (Rats): not evaluated

12. ECOLOGICAL INFORMATION

	<u>CONCENTRATE</u>	<u>DILUTION</u>
Chemical Oxygen Demand:	619,972 mg/l	18,599 mg/l
Biological Oxygen Demand (20 day):	389,600 mg/l	11,688 mg/l
Biodegradability (B.O.D./C.O.D.)	63%	63%
Total Organic Carbon:	202,000 mg/l	6060 mg/l
LC50 (96 hour pimephales promelas)	not determined	not determined
LC50 (48 hour, daphnia magna)	not determined	not determined

13. DISPOSAL CONSIDERATIONS

Dispose in accordance with local, state, and federal regulations. Discharge to waste treatment plants only with permission. Anti-foam agents may be used to reduce foaming in waste streams.

14. TRANSPORTATION INFORMATION

Department of Transportation proper shipping name: not regulated

15. REGULATORY INFORMATION

All ingredients are on the TSCA inventory. Ethylene glycol is reportable under SARA Title III, RQ = 5,000 lbs No components are reportable under **CERCLA**.

Revision date changed.

ANSULITE AFC-5A (NMS) 3% AFFF Concentrate

Description

ANSULITE AFC-5A (NMS) 3% AFFF (Aqueous Film-Forming Foam) Concentrate combines fluoro- and hydrocarbon-surfactant technologies to provide superior fire and vapor suppression for Class B hydrocarbon fuel fires. This synthetic foam concentrate is intended for firefighting applications at 3% solution in fresh, salt, or hard water.

ANSULITE AFC-5A (NMS) foam solution utilizes three suppression mechanisms intended for rapid fire knockdown and superior burnback resistance:

- The foam blanket blocks oxygen supply to the fuel.
- Liquid drains from the foam blanket and forms an aqueous film that suppresses fuel vapor and seals the fuel surface.
- The water content of the foam solution produces a cooling effect for additional fire suppression.

TYPICAL PHYSIOCHEMICAL PROPERTIES AT 77 °C (25 °F)

Appearance Pale yellow liquid Density $1.023 \pm 0.020 \text{ g/ml}$

pH 7.0 - 8.5Refractive Index 1.3640 ± 0.0020 Viscosity* 4.5 ± 1.0 cSt

*Cannon-Fenske viscometer at 77 °F (25 °C)

Approvals, Listings, and Standards

ANSULITE AFC-5A (NMS) 3% AFFF Concentrate is designed in accordance with National Fire Protection Association (NFPA) Standard 11 for Low-, Medium-, and High-Expansion Foam. The concentrate is approved, listed, qualified under, or meets the requirements of the following specifications and standards:

UL Standard 162, Foam Liquid Concentrates

010052

Application

ANSULITE AFC-5A (NMS) Concentrate is intended for use on Class B hydrocarbon fuel fires with low water solubility such as crude oils, gasolines, diesel fuels, and aviation fuels. It is not suitable for use on polar fuels with appreciable water solubility such as methyl and ethyl alcohol, acetone, and methyl ethyl ketone.

The concentrate also has excellent wetting properties that can effectively combat Class A fires. It may also be used in conjunction with dry chemical agents to provide even greater fire suppression performance.

ANSULITE AFC-5A (NMS) 3% AFFF Concentrate can be ideal for fixed, semi-fixed, and emergency response firefighting applications such as:

- Fuel or chemical storage tanks
- Industrial chemical and petroleum processing facilities
- Truck/rail loading and unloading facilities
- Flammable liquid containment areas
- Mobile equipment
- Crash fire rescue

Foaming Properties

ANSULITE AFC-5A (NMS) 3% AFFF Concentrate may be effectively applied using most conventional foam discharge equipment at a 3% dilution with fresh, salt, or hard water. For optimum performance, water hardness should not exceed 500 ppm expressed as calcium and magnesium.

ANSULITE AFC-5A (NMS) Concentrate requires low energy to foam and the foam solution may be applied with aspirating and non-aspirating discharge devices. Aspirating discharge devices typically produce expansion ratios from 3.5:1 to 10:1, depending on the type of device and the flow rate. Non-aspirating devices, such as handline water fog/stream nozzles or standard sprinkler heads, typically produce expansion ratios from 2:1 to 4:1. Medium-expansion discharge devices typically produce expansion ratios from 20:1 to 60:1.

Proportioning

The recommended operational temperature range for ANSULITE AFC-5A (NMS) 3% AFFF Concentrate is 35 °F to 120 °F (2 °C to 49 °C). This foam concentrate can be correctly proportioned using most conventional, properly calibrated, in-line proportioning equipment such as:

- Balanced and in-line balanced pressure pump proportioners
- Balanced pressure bladder tanks and ratio flow controllers
- Around-the-pump type proportioners
- Fixed or portable in-line venturi type proportioners
- Handline nozzles with fixed eductor/pick-up tubes

For immediate use: The concentrate may also be diluted with fresh or salt water to a 3% pre-mix solution.

For delayed use: Consult Technical Services for guidance regarding suitability of a stored pre-mix solution (fresh water only).

Storage and Handling

ANSULITE AFC-5A (NMS) 3% AFFF Concentrate should be stored in the original supplied package (HDPE totes, drums, or pails) or in the recommended foam system equipment as outlined in Tyco Fire Protection Products Technical Bulletin "Storage of Foam Concentrates". The product should be maintained within the recommended temperature range. If the concentrate freezes during transport or storage, full product serviceability can be restored upon thaw with gentle re-mixing.

Factors affecting the foam concentrate's long-term effectiveness include temperature exposure and cycling, storage container characteristics, air exposure, evaporation, dilution, and contamination. The effective life of ANSULITE AFC-5A (NMS) Concentrate can be maximized through optimal storage conditions and proper handling. ANSUL concentrates have demonstrated effective firefighting performance with contents stored in the original package under proper conditions for more than 10 years.

Mixing ANSULITE AFC-5A (NMS) Concentrate with other foam concentrates for long-term storage is not recommended. Use in conjunction with comparable 3% AFFF products for immediate incident response is appropriate.

Materials of Construction Compatibility

To help avoid corrosion, galvanized pipe and fittings should never be used in contact with undiluted ANSULITE AFC-5A (NMS) 3% AFFF Concentrate. Refer to Tyco Fire Products Technical Bulletin "Acceptable Materials of Construction" for recommendations and guidance regarding compatibility of foam concentrate with common materials of construction in the firefighting foam industry.

Inspection

ANSULITE AFC-5A (NMS) 3% AFFF Concentrate should be inspected periodically in accordance with NFPA 11, EN 13565-2, or other relevant standard. A representative concentrate sample should be sent to Tyco Fire Protection Products Foam Analytical Services or other qualified laboratory for quality analysis per the applicable standard. An annual inspection and sample analysis is typically sufficient, unless the product has been exposed to unusual conditions.

Ordering Information

ANSULITE AFC-5A (NMS) 3% AFFF Concentrate is available in drums only.

2. Hazards Identification

Emergency overview WARNING! Causes skin and eye irritation.

This product is considered hazardous under 29 CFR 1910.1200 (Hazard Communication). **OSHA** regulatory status

Potential health effects

Routes of exposure Eye contact. Skin contact. Inhalation. Ingestion. **Eves** Do not get this material in contact with eyes.

Skin Avoid contact with the skin. Frequent or prolonged contact may defat and dry the skin, leading to

discomfort and dermatitis.

Inhalation Do not breathe vapor. May be irritating. Ingestion Not a likely route of entry. Do not ingest.

Eyes. RESPIRATORY SYSTEM. Skin. Central nervous system. **Target organs**

Chronic effects Frequent or prolonged contact may defat and dry the skin, leading to discomfort and dermatitis.

Irritation of nose and throat. Irritation of eyes and mucous membranes. Defatting of the skin. Signs and symptoms

Rash. Skin irritation.

3. Composition / Information on Ingredients

Components	CAS#	Percent
Butyl Carbitol	112-34-5	2.5 - 10
Other components below reportable levels		> 90

4. First Aid Measures

First aid procedures

Eye contact Immediately flush eyes with plenty of water for at least 15 minutes. Remove contact lenses, if present and easy to do. Continue rinsing. Get medical attention if irritation persists after washing.

Wash off with warm water and soap. Get medical attention if irritation develops and persists.

Skin contact

Inhalation Move to fresh air. For breathing difficulties, oxygen may be necessary. Get medical attention, if

needed.

Rinse mouth. Do not induce vomiting without advice from poison control center. IF SWALLOWED: Ingestion

Immediately call a POISON CENTER or doctor/physician. If vomiting occurs, keep head low so

that stomach content doesn't get into the lungs.

Notes to physician Symptoms may be delayed.

1521 Version #: 01 Revision date: 08-30-2010 F-9743

General advice If you feel unwell, seek medical advice (show the label where possible). Ensure that medical

personnel are aware of the material(s) involved, and take precautions to protect themselves. Show this safety data sheet to the doctor in attendance.

5. Fire Fighting Measures

No unusual fire or explosion hazards noted. Flammable properties

Extinguishing media

Suitable extinguishing

media

This product is not flammable. Use extinguishing agent suitable for type of surrounding fire.

Protection of firefighters

Specific hazards arising from the chemical

None known.

Specific methods None known.

Hazardous combustion

products

May include oxides of nitrogen.

6. Accidental Release Measures

Local authorities should be advised if significant spillages cannot be contained. Surfaces may Personal precautions

become slippery after spillage.

Prevent further leakage or spillage if safe to do so. Avoid discharge into drains, water courses or **Environmental precautions**

onto the ground.

Stop the flow of material, if this is without risk. Dike the spilled material, where this is possible. **Methods for containment**

Prevent entry into waterways, sewer, basements or confined areas.

Methods for cleaning up Should not be released into the environment.

> Large Spills: Dike far ahead of spill for later disposal. Use a non-combustible material like vermiculite, sand or earth to soak up the product and place into a container for later disposal.

Small Spills: Wipe up with absorbent material (e.g. cloth, fleece).

Never return spills in original containers for re-use. Following product recovery, flush area with

water. Clean surface thoroughly to remove residual contamination.

7. Handling and Storage

Handling Do not get this material in contact with eyes. Avoid contact with skin. Avoid prolonged exposure.

Handle and open container with care.

Storage Store in cool place. Store in a well-ventilated place. Keep container tightly closed. Keep out of the

reach of children. Use care in handling/storage.

8. Exposure Controls / Personal Protection

Personal protective equipment

Do not get in eyes. Wear approved chemical safety glasses or goggles where eye exposure is Eye / face protection

reasonably probable.

Wear appropriate chemical resistant clothing. Chemical resistant gloves. Skin protection

When workers are facing concentrations above the exposure limit they must use appropriate Respiratory protection

certified respirators.

General hygiene

considerations

Handle in accordance with good industrial hygiene and safety practice. When using, do not eat,

drink or smoke. Avoid contact with skin.

9. Physical & Chemical Properties

Appearance

Form Liquid.

Light yellow. Clear. Color

Mild. Sweet. Odor

Liquid. Physical state pН 6.5 - 8.5

Relative density Not available. Solubility (water) Not available. Not available **Partition coefficient**

(n-octanol/water)

Auto-ignition temperature Not available. Not available. **Decomposition temperature** Not available. VOC

10. Chemical Stability & Reactivity Information

Chemical stability Material is stable under normal conditions.

Conditions to avoid None known.

Alkaline metals. Strong acids, alkalies and oxidizing agents. Incompatible materials

Hazardous decomposition

products

Nitrogen oxides (NOx). Sulfur oxides. Carbon oxides.

11. Toxicological Information

Toxicological information	The toxicity of this product has not been tested.
---------------------------	---

Toxicological data

Components	Test Results
Butyl Carbitol (112-34-5)	Acute Dermal LD50 Rabbit: 2700 mg/kg
	Acute Oral LD50 Guinea pig: 2000 mg/kg
	Acute Oral LD50 Rabbit: 2200 mg/kg
	Acute Oral LD50 Rat: 6560 mg/kg
	Acute Other LD50 Mouse: 850 mg/kg
	Acute Other LD50 Rat: 500 mg/kg

Local effects Components of the product may be absorbed into the body through the skin. Contact may irritate

or burn eyes.

This product is not considered to be a carcinogen by IARC, ACGIH, NTP, or OSHA. Carcinogenicity

12. Ecological Information

Ecotoxicological data	
Components	Test Results
Butyl Carbitol (112-34-5)	EC50 Algae: > 100 mg/l 96.00 Hours
	EC50 Water flea (Daphnia magna): 3184 mg/l 24.00 hours
	LC50 Bluegill (Lepomis macrochirus): 1300 mg/l 96.00 hours

Not expected to be harmful to aquatic organisms. **Ecotoxicity**

Environmental effects An environmental hazard cannot be excluded in the event of unprofessional handling or disposal.

Not available. Persistence and degradability

1521 Version #: 01 Revision date: 08-30-2010 F-9743

13. Disposal Considerations

Disposal instructions This product, in its present state, when discarded or disposed of, is not a hazardous waste

> according to Federal regulations (40 CFR 261.4 (b)(4)). Under RCRA, it is the responsibility of the user of the product to determine, at the time of disposal, whether the product meets RCRA criteria for hazardous waste. Dispose of waste material according to Local, State, Federal, and

Provincial Environmental Regulations.

Waste from residues / unused

products

Dispose of in accordance with local regulations.

14. Transport Information

DOT

Not regulated as dangerous goods.

15. Regulatory Information

US federal regulations This product is a "Hazardous Chemical" as defined by the OSHA Hazard Communication

Standard, 29 CFR 1910.1200.

COMPOSITION NOTES:

3. HAZARDS IDENTIFICATION

EMERGENCY OVERVIEW WARNING! MAY CAUSE EYE AND/OR SKIN IRRITATION

Routes of Exposure:

Eye Contact: Exposure during the handling or mixing may cause immediate or delayed irritation or inflammation.

Skin Contact: Exposure during the handling or mixing may cause immediate or delayed irritation or inflammation.

<u>Ingestion:</u> Ingestion of large quantities may cause abdominal cramps, nausea, vomiting, diarrhea.

<u>Inhalation:</u> Exposure to this product in excess of the applicable TVL or PEL may cause or aggravate other lung conditions. Exposure to this product may cause irritation to the nose, throat, and upper respiratory system.

Chronic: None known

<u>Medical Conditions which May be Aggravated by Inhalation or Dermal Exposure:</u> Persons with unusual (hyper) sensitivity to chemicals may experience adverse reactions to this product.

<u>Carcinogenic Potential:</u> This product and its ingredients are not listed as a carcinogen by NTP, OSHA, ACGIH or IARC.

4. FIRST AID MEASURES

Eyes: Immediately flush eyes thoroughly with water. Continue flushing eye for at least 15 minutes, including under lids. Seek immediate medical attention.

Skin: In case of contact, immediately wash with plenty of soap and water for at least 5 minutes. Seek medical attention if irritation or redness occurs. Remove contaminated clothing and shoes. Clean contaminated clothing and shoes before re-use.

<u>Ingestion:</u> If victim is conscious and alert, give 3 – 3 glasses of water to drink. Do not induce vomiting without medical advice. Do not induce vomiting or give anything by mouth to an unconscious person. Seek immediate medical attention. Do not leave victim unattended. Vomiting may occur spontaneously. To prevent aspiration of swallowed product, lay victim on side with head lower than waist. If vomiting occurs and the victim is conscious, give water to further dilute the chemical.

<u>Inhalation:</u> If respiratory irritation or distress occurs remove victim to fresh air. Seek medical attention if respiratory irritation or distress continues. If breathing is difficult, give oxygen. If breathing as ceased apply artificial respiration using oxygen and a suitable mechanical device such as a bag and a mask.

Notes to Physician: All treatments should be based on observed signs and symptoms of distress in the patient. Consideration should be given to the possibility that overexposure to materials other than this product may have occurred.

5. FIRE FIGHTING MEASURES

Flash Point - >150°F (65.56°C)

Lower Explosive Limit – Not Applicable

Upper Explosive Limit – Not Applicable

Hazardous Combustion Products – Oxides of nitrogen, sulfur and carbon

Unusual Fire & Explosion Hazards – Decomposition products may be toxic..

Extinguishing Media – Water, Foam, Carbon Dioxide, Dry Chemical, Halon

Special fire fighting Procedures – Self contained breathing apparatus

Auto Ignition Temperature - Not Applicable

6. ACCIDENTAL RELEASE MEASURES

Wear appropriate protective gear for the situation. See Personal Protection information in section 8.

<u>Containment of Spill:</u> Dike or retain dilution water or water from firefighting for later disposal. Follow procedure described below under cleanup and disposal of spills.

<u>Cleanup and Disposal of Spill:</u> Exercise appropriate precautions to minimize direct contact with skin or eyes and prevent inhalation of mist. Vacuum or sweep into an appropriate storage container. Absorb smaller quantities with absorbent materials and dispose of properly. Washing area with water will create large amounts of foam. Avoid creating mist. Ventilate area.

<u>Environmental and Regulatory Reporting:</u> Runoff from fire control or dilution water may cause pollution. Spills may be reportable to the National Response Center (800-424-8802) and to state and/or local agencies.

7. HANDLING AND STORAGE

<u>Minimum/Maximum Storage Temperature:</u> Store at temperatures of 35°F - 120°F. If the material freezes, it may e thawed without loss of performance.

<u>Handling:</u> Avoid inhalation or contact with eyes, skin or clothing. Avoid prolonged or repeated exposure. Use with adequate ventilation.

Storage: Store in an area that is dry, well ventilated and in tightly closed containers, or appropriate end-use devices..

8. EXPOSURE CONTROLS / PERSONAL PROTECTION

<u>Engineering Controls:</u> Where engineering controls are indicated by use conditions or a potential for excessive exposure exists, the following traditional exposure techniques may be used to effectively minimize employee exposures.

Eye Protection: When engaged in activities where product could contact the eye, wear safety glasses with side shields, goggles, or face shield.

Skin Protection: Skin contact should be minimized through use of latex gloves and suitable long sleeved clothing. Consideration must be given both to durability as well as permeation resistance.

Respiratory Protection: Avoid actions that cause dust exposure to occur. Use local or general ventilation to control exposures below applicable exposure limits. NIOSH or MSHA approved particulate filter respirators should be used in the context of respiratory protection program meeting the requirements of the OSHA respiratory protection standard [29 CFR 1910.134] to control exposures when ventilation or other controls are inadequate or discomfort or irritation is experienced. Respirator and/or filter cartridge selection should be based on American National Standards Institute (ANSI) Standards Z88.2 Practices for Respiratory Protection.

Ventilation: Use local exhaust or general dilution ventilation to control exposure within applicable limits.

Work Practice Controls:

Personal hygiene is an important work practice exposure control measure and the following general measures should be taken when working with or handling this material:

- (1) Do not store, use, and/or consume foods, beverages, tobacco products, or cosmetics in areas where this material is stored.
- (2) Wash hands and face carefully before eating, drinking, using tobacco, applying cosmetics, or using the toilet.
- (3) Wash exposed skin promptly to remove accidental splashes or contact with this material.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance – Clear amber liquid
Odor – Slight solvent odor
Physical State – Liquid
Specific Gravity (H2O=1) – 1.018 – 1.023 g/ml
pH – 7.0 – 8.5

Vapor Pressure – Not Evaluated

Density – Not evaluated

Boiling Point – 205–212° F (96 –100° C)

Melting Point – 30° F (-1.1° C)

Solubility in Water – Soluble

Stability: Stable.

Conditions to avoid: Unintentional contact with water.

<u>Hazardous Polymerization:</u> Hazardous polymerization will not occur.

Incompatibility with other materials: Strong oxidizing agents

Hazardous Decomposition: Oxides of nitrogen, sulfur and carbon

11. TOXICOLOGICAL INFORMATION

Acute Eye and Skin Toxicity Data:

Toxicological Information and Interpretation:
Eye irritation (Rabbits): Mild irritant
Skin Irritation (Rabbit): Minimal irritant
Acute Oral Effects (Rats): Not evaluated
Inhalation Toxicity: Not evaluated
Sensitization: Not evaluated
Teratology: Not evaluated
Mutagenicity: Not evaluated

Reproduction: Not evaluated To the best of our knowledge, the chemical, physical, and toxicological properties of this product have not been

thoroughly investigated.

Chronic Toxicity:

This product does not contain any substances that are considered by OSHA, NTP, IARC or ACGIH to be "probable" or "suspected" human carcinogens.

12. ECOLOGICAL INFORMATION

CONCENTRATE **SOLUTION (AS USED)** 6.300 mg/l **Chemical Oxygen Demand:** 210,000 mg/l Biological Oxygen Demand (20 day): 79,800 mg/l 2,394 mg/l Biodegradability (B.O.D/C.O.D.): 38% 38% 33,600 mg/l **Total Organic Carbon:** 1,008 mg/l LC50 (96 hour Pimephales promelas): 233 ppm 7,767 ppm LC50 (48 hour Daphnia magnas): 1,110 ppm 37,000 ppm

13. DISPOSAL CONSIDERATIONS

<u>Waste Disposal:</u> Chemical additions, processing or otherwise altering this material may make the waste management information presented in this MSDS incomplete, inaccurate or otherwise inappropriate. Dispose of waste material according to local, state and federal regulations.

14. TRANSPORTATION INFORMATION

Department of Transportation (DOT)

Hazardous Materials Description/Proper Shipping Name: NOT REGULATED

Hazard Class: Not Applicable

Identification Number: Not Applicable

Required Label Text: Not Applicable

Hazardous Substances/Reportable Quantities: Not Applicable

International Air Transport Association (IATA): NOT REGULATED

15. REGULATORY INFORMATION

FEDERAL REGULATORY STATUS:

<u>Status under OSHA Hazard Communication Standard, 29 CFR 1910.1200:</u> This product is considered a "hazardous chemical" under this regulation, and should be included in the employer's hazard communication program.

Reportable Quantities Under the Clean Water Act, CERCLA, and EPCRA, 40 CFR 117, 302 and 355:

The product contains no component regulated under section 304 (40 CFR 370).

Hazard Category and Applicability of EPCRA Hazardous Substance Inventory Reporting, 40 CFR 370:

Not listed

Applicability of EPCRA Toxic Chemical Release Inventory (TRI) Reporting. 40 CFR 372:

Not subject to TRI reporting

Status Under the Toxic Substances Control Act, 40 CFR 710:

All chemicals comprising this product are listed on the TSCA Inventory.

SARA Title III Hazard Classes:

Fire Hazard: NO
Reactive Hazard: NO
Release of Pressure: NO
Acute Health Hazard: YES
Chronic Health Hazard: NO

State Regulations:

California:

This product does not contain any components that are regulated under California Proposition 65.

Pennsylvania Right To Know Components

This product does not contain any components on the Pennsylvania Right to Know List

16. OTHER INFORMATION

NFPA Ratings: Health: 1 Flammability: 1 Reactivity: 0

Label Requirements:

WARNING! MAY CAUSE EYE AND/OR SKIN IRRITATION

Hazardous Material Information System (HMIS): Health 1

Flammability	1
Reactivity	0
Personal Protection	В

NFPA/HMIS Definitions: 0-Least, 1-Slight, 2-Moderate, 3-High, 4-Extreme

Protective Equipment: Safety glasses, gloves

ADDITIONAL INFORMATION:

The information contained in this document is given in good faith and based on our current knowledge. It is only an indication and is in no way binding, notably as regards infringement of, or prejudice to third parties through the use of our products. Chemguard guarantees that its products comply with its sales specifications. This information must on no account be used as a substitute for necessary prior tests which alone can ensure that a product is suitable for a given use. Users are responsible for ensuring compliance with local legislation and for obtaining the necessary certifications and authorizations.

END OF MSDS

1. IDENTIFICATION

Product Name Aer-O-Water®C6 3EM 3%

Aqueous Film Forming Foam Concentrate (AFFF)

Recommended use of the chemical and restrictions on use

Identified uses
Restrictions on Use
Company Identification

Firefighting Foam Concentrate

See Section 15 National Foam

350 East Union Street West Chester, PA 19382

Customer Information Number (610) 363-1400

Emergency Telephone Number Infotrac at (800) 535-5053

Issue DateNovember 2, 2016Supersedes DateJanuary 8, 2016

Safety Data Sheet prepared in accordance with OSHA's Hazard Communication Standard (29 CFR 1910.1200) and the Globally Harmonized System of Classification and Labelling of Chemicals (GHS)

2. HAZARD IDENTIFICATION

Hazard Classification

Eye Damage/Irritation - Category 2A Specific Target Organ Toxicity (Repeated Exposure) - 2

Label Elements

Hazard Symbols

Signal Word: Warning

Hazard Statements

Causes serious eye irritation.

May cause damage to organs (kidney) through prolonged or repeated exposure (oral).

Precautionary Statements

Prevention

Wash hands thoroughly after handling.

Wear eye protection and face protection.

Response

If in eyes: Rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do. Continue rinsing. If eye irritation persists: Get medical advice/attention.

Get medical advice/attention if you feel unwell.

Storage

None

Disposal

Dispose of contents/container in accordance with local regulation.

Other Hazards

None identified.

2. HAZARD IDENTIFICATION

Specific Concentration Limits

The values listed below represent the percentages of ingredients of unknown toxicity.

Acute oral toxicity <1%
Acute dermal toxicity <10%
Acute inhalation toxicity 30 - 40%
Acute aquatic toxicity 20 - 30%

3. COMPOSITION/INFORMATION ON INGREDIENTS

This product is a mixture.

Component	CAS Number	Concentration
Water	7732-18-5	60 - 70%
Diethylene Glycol Monobutyl Ether	112-34-5	10 - 20%
Ethylene Glycol	107-21-1	5 - 15%
Synthetic detergent	Proprietary	1 - 10%
Fluoroalkyl surfactants	Proprietary	1 - 5%
Surfactant	Proprietary	<1%

4. FIRST- AID MEASURES

Description of necessary first-aid measures

Eves

Immediately flood the eye with plenty of water for at least 15 minutes, holding the eye open. Obtain medical attention if soreness or redness persists.

Skin

Wash skin thoroughly with soap and water. Obtain medical attention if irritation persists.

Ingestion

Dilute by drinking large quantities of water and obtain medical attention.

Inhalation

Move victim to fresh air. Obtain medical attention immediately for any breathing difficulty.

Most important symptoms/effects, acute and delayed

Aside from the information found under Description of necessary first aid measures (above) and Indication of immediate medical attention and special treatment needed, no additional symptoms and effects are anticipated.

Indication of immediate medical attention and special treatment needed

Notes to Physicians

Treat symptomatically.

5. FIRE - FIGHTING MEASURES

Suitable Extinguishing Media

This preparation is used as an extinguishing agent and therefore is not a problem when trying to control a fire. Use extinguishing agent appropriate to other materials involved.

Specific hazards arising from the chemical

None known

Revision Date: November 2, 2016 NMS#210 Page 2 of 8

5. FIRE - FIGHTING MEASURES

Special Protective Actions for Fire-Fighters

Wear full protective clothing and self-contained breathing apparatus as appropriate for specific fire conditions.

6. ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

Wear appropriate protective clothing. Prevent skin and eye contact.

Environmental Precautions

Prevent foam concentrate or foam solution from entering ground water, surface water, or storm drains. Discharge and disposal of concentrate or foam solution should be made in accordance with federal, state, and local regulations.

Methods and materials for containment and cleaning up

Contain and absorb using appropriate inert material and transfer into suitable containers for recovery or disposal.

7. HANDLING AND STORAGE

Precautions for safe handling

Wear appropriate protective clothing. Prevent skin and eye contact.

Conditions for safe storage

Store in original containers between 35°F and 120°F (2°C and 49°C). Storage area should be: - cool - dry - well ventilated - under cover - out of direct sunlight

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Control parameters

Exposure limits are listed below, if they exist.

Diethylene Glycol Monobutyl Ether, Inhalable Fraction and Vapor

ACGIH: TLV 10 ppm, 8hr Ethylene Glycol, Aerosol ACGIH: Ceiling 100 mg/m³

Appropriate engineering controls

Use with adequate ventilation. If this product is used in a pressurized system, there should be local procedures for the selection, training, inspection and maintenance of this equipment. When used in large volumes, use local exhaust ventilation.

Individual protection measures

Respiratory Protection

Wear respiratory protection if there is a risk of exposure to high vapor concentrations, aerosols or if applied to hot surfaces. A NIOSH approved full face respirator may be worn. The specific respirator selected must be based on the airborne concentration found in the workplace and must not exceed the working limits of the respirator.

Revision Date: November 2, 2016 NMS#210 Page 3 of 8

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Skin Protection

Gloves

Eye/Face Protection

Chemical goggles or safety glasses with side shields.

Body Protection

Normal work wear.

9. PHYSICAL AND CHEMICAL PROPERTIES

Appearance

Odor

Physical State Liquid

Not applicable

10. STABILITY AND REACTIVITY

Reactivity

No data available.

Chemical Stability

Stable under normal conditions.

Possibility of hazardous reactions

Hazardous polymerization will not occur.

Conditions to Avoid

Contact with incompatible materials

Incompatible Materials

Water reactive materials – burning metals – electronically energized equipment

Revision Date: November 2, 2016 NMS#210 Page 4 of 8

10. STABILITY AND REACTIVITY

Hazardous Decomposition Products

Oxides of carbon – hydrogen fluoride – aldehydes – ketones – organic acids

11. TOXICOLOGICAL INFORMATION

Acute Toxicity

Synthetic Detergent
Oral LD50 (rat) >5000mg/kg
Diethylene Glycol Monobutyl Ether
Oral LD50 (rat) 3305 mg/kg
Dermal LD5 (rabbit) 2764 mg/kg

Ethylene Glycol

Minimum lethal dose in humans: 1600 mg/kg body weight(estimate)

LD50 Dermal (rabbit) >3500 mg/kg

Specific Target Organ Toxicity (STOT) - single exposure

Available data indicates this product is not expected to cause target organ effects after a single exposure.

Specific Target Organ Toxicity (STOT) - repeat exposure

Ethylene Glycol: May cause damage to organs (kidney) through prolonged or repeated exposure (oral).

Serious Eye damage/Irritation

<u>Diethylene Glycol Monobutyl Ether:</u> Causes serious eye irritation.

<u>Surfactant:</u> Severe eye irritant (based on similar material)

Synthetic Detergent: Severely irritating (rabbit) (50% solution)

Skin Corrosion/Irritation

Available data indicates this product is not expected to cause skin irritation.

Respiratory or Skin Sensitization

Available data indicates this product is not expected to cause skin sensitization.

Carcinogenicity

Not considered carcinogenic by NTP, IARC, and OSHA.

Germ Cell Mutagenicity

Available data indicates this product is is not expected to be mutagenic.

Reproductive Toxicity

Available data indicates this product is not expected to cause reproductive toxicity or birth defects.

Aspiration Hazard

Not an aspiration hazard.

12. ECOLOGICAL INFORMATION

Ecotoxicity

No relevant studies identified.

Revision Date: November 2, 2016 NMS#210 Page 5 of 8

12. ECOLOGICAL INFORMATION

Mobility in soil

No relevant studies identified.

Persistence/Degradability

No relevant studies identified.

Bioaccumulative Potential

No relevant studies identified.

Other adverse effects

No relevant studies identified.

13. DISPOSAL CONSIDERATIONS

Disposal Methods

This product, as sold, is not a RCRA-listed waste or hazardous waste as characterized by 40 CFR 261. However, state and local requirements for waste disposal may be more restrictive or otherwise different from federal regulations. Therefore, applicable local and state regulatory agencies should be contacted regarding disposal of waste foam concentrate or foam/foam solution.

Concentrate

Prevent foam concentrate from entering ground water, surface water or storm drains. Small quantities of foam concentrate may be collected on absorbents which can then be disposed of. Disposal should be made in accordance with local, state and federal regulations. High temperature incineration is recommended.

Foam/Foam Solution

Prevent foam/foam solution from entering ground water, surface water or storm drains. Small quantities of foam solution may be collected on absorbents which can then be disposed of. Disposal should be made in accordance with local, state and federal regulations, high temperature incineration is recommended.

<u>NOTE:</u> Please consult National Foam for additional information regarding the disposal of foam concentrates and foam solutions.

14. TRANSPORT INFORMATION

Shipping Information
Shipping Description
National Motor Freight Code

Fire Extinguisher Charges or Compounds N.O.I., Class 70 69160 Sub 0

This information is not intended to convey all transportation classifications that may apply to this product. Classifications may vary by container volume and by regional regulations. It is the responsibility of the transporting organization to follow all applicable laws, regulations and rules when transporting this material.

15. REGULATORY INFORMATION

United States TSCA Inventory

This product contains an ingredient that has restricted use under the EPA Toxic Substance Control Act This product may only be used as a firefighting foam. Release to water is only allowed during firefighting, testing of firefighting systems or during quality control/assurance activities. Any other use of this product is strictly prohibited.

Revision Date: November 2, 2016 NMS#210 Page 6 of 8

15. REGULATORY INFORMATION

Canada DSL Inventory

All ingredients in this product have not been verified for listing on the Domestic Substance List (DSL) or the Non-Domestic Substance List (NDSL).

SARA Title III Sect. 311/312 Categorization

Immediate (Acute) Health Hazard, Delayed (Chronic) Health Hazard

SARA Title III Sect. 313

This product contains the following chemicals that are listed in Section 313 at or above de minimis concentrations: Ethylene Glycol - Diethylene Glycol Monobutyl Ether

Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)

Ethylene Glycol (107-21-1) 12% by weight maximum

Diethylene Glycol Monobutyl Ether (112-34-5) 16% by weight maximum

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
LOS ALAMITOS MERCURY	3772 KATELLA BLVD.	NW 1/4 - 1/2 (0.317 mi.)	49	99

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/11/2017 has revealed that there

are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

FEDERAL MOGUL CORP-A	4411 KATELLA	N 1/4 - 1/2 (0.405 mi.)	O65	180

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

SAFETY KLEEN CORP 7	3876 FLORISTA ST	NNW 1/4 - 1/2 (0.334 mi.)	L52	110

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAFETY KLEEN CORP 7	3876 FLORISTA ST	NNW 1/4 - 1/2 (0.334 mi.)	L52	110

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 5 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are

11 ENVIROSTOR sites within approximately 1 mile of the target property.

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 24 LUST sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist

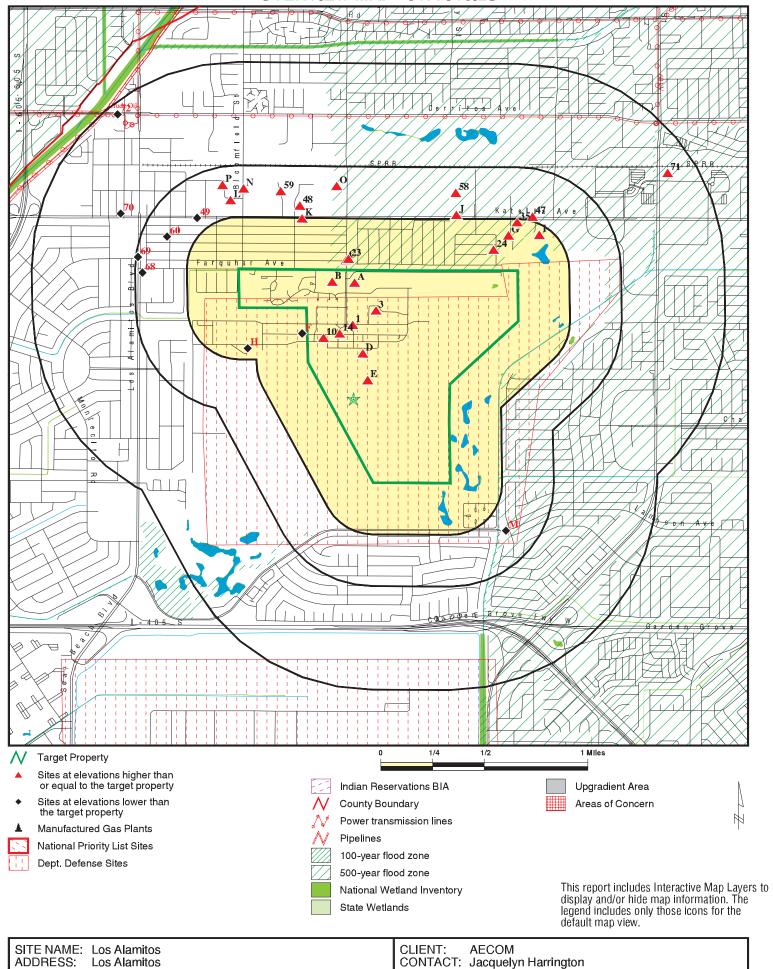

Cleaner sites within approximately 0.125 miles of the target property.

Classification: Large Quantity Generator

Description: Handler: generates 1,000 kg or more of hazardous waste during any

calendar month; or generates more than 1 kg of acutely hazardous waste during any calendar month; or generates more than 100 kg of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month; or generates 1 kg or less of acutely hazardous waste during any calendar month, and accumulates more than 1 kg of acutely hazardous waste at any time; or generates 100 kg or less of any residue or contaminated soil, waste or other debris resulting from the cleanup of a spill, into or on any land or water, of acutely hazardous waste during any calendar month, and accumulates more than

100 kg of that material at any time

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 2941

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected: Other Groundwater (uses other than drinking water), Soil

Potential Contaminants of Concern: Tetrachloroethylene (PCE)

Site History: Soil and groundwater were containinated with dry cleaning solvents

(PCE). Soil vapor extraction of the PCE-affected soil and groundwater monitoring at the site began in June 2004, and the operation was discontinued in March 2006. Soil excavation/removal of the

PCE-affected soil was the final remediation measure required and was implemented in November 2006. Regional Board staff issued a "no

further action" letter on Februrary 8, 2007.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110009539348

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Workplan
Completed Date: 12/02/2009

Comments: The Work Plan included plans to install an additional groundwater

monitoring well to determine the vertical extent of groundwater

contamination. The Work Plan was approved, but comments were included by DTSC to obtain concurrence with DTSC before abandoning any wells.

Completed Area Name: PROJECT WIDE Completed Sub Area Name: Not reported

Completed Document Type: Information Request Letter

Completed Date: 09/22/2008

Comments: Request for additional characterization of the site via a workplan

due to elevated concentrations of VOCs in the groundwater investigation. Report suggests that additional information is needed

to complete the characterization. cs 9/25/08

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Report
Completed Date: 08/26/1999

Comments: Approval of Phase I RFI Report which was submitted concurrantly with

the Phase II for RFI workplan.

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Workplan
Completed Date: 08/26/1999

Comments: This approval is for the Phase II track. This was approved concurrently witht the Phase I track RFI report approval.

FINDS:

Registry ID: 110000739201

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET,

Direction Distance

EDR ID Number Elevation **EPA ID Number** Site Database(s)

FEDERAL MOGUL CORP-ARROWHEAD PRODUCTS (Continued)

1000344036

WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 40184.1

Waste code: D002

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS Waste name:

> CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Amount (Lbs): 34939.5

Waste code: D003

A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS Waste name:

> NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

Amount (Lbs): 191

FINDS:

Registry ID: 110002791943

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016 Date Data Arrived at EDR: 01/05/2017 Date Made Active in Reports: 04/07/2017

Number of Days to Update: 92

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/11/2017 Date Data Arrived at EDR: 12/22/2017 Date Made Active in Reports: 01/12/2018

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation: 25 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5633745 LOS ALAMITOS, CA

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

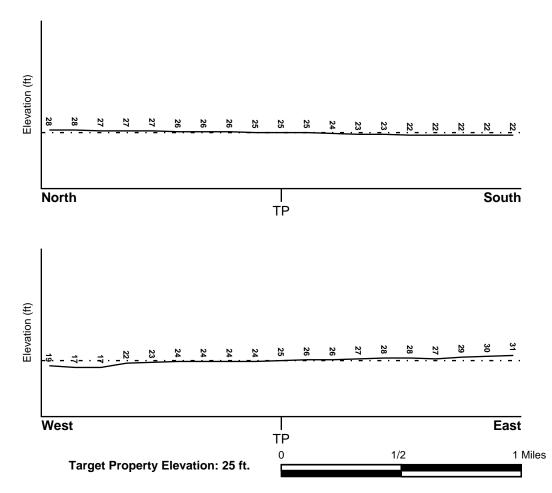

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

Additional Panels in search area: FEMA Source Type

06037C1990F FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

LOS ALAMITOS YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1/2 - 1 Mile North

Site Name: FEDERAL MOGUL CORP-ARROWHEAD PRODUCTS

Site EPA ID Number: CAD008302002

Groundwater Flow Direction: S TO SW ON A REGIONAL BASIS. Inferred Depth to Water: 15 to 20 feet in the perched aquifer.

Hydraulic Connection: The shallow perched aquifer is underlain by the Artesia water table

aquifer at a depth of 40 to 100 feet. Lower aquifers are separated by

confining layers.

Sole Source Aquifer: No information about a sole source aquifer is available
Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: HUENEME

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep,

moderately well and well drained soils with moderately coarse

textures.

Soil Drainage Class: Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Bou	ndary		Classification Saturated hydraulic		Saturated hydraulic	
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity	Soil Reaction (pH)
1	0 inches	27 inches	fine sandy loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4
2	27 inches	59 inches	stratified sand to silt loam	Not reported	Not reported	Max: 42 Min: 14	Max: 8.4 Min: 7.4

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Los Alamitos 12120 Shamrock Plaza Los Alamitos, CA 90720 Omaha, NE 68154

EDR Inquiry # 5177516.3 Contact: Jacquelyn Harrington

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal CERCLIS list

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
LOS ALAMITOS MERCURY	3772 KATELLA BLVD.	N 1/4 - 1/2 (0.470 mi.)	32	107

Federal RCRA CORRACTS facilities list

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SAFETY KLEEN CORP 7	3876 FLORISTA ST	N 1/2 - 1 (0.557 mi.)	H37	120

Federal RCRA generators list

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/30/2017 has revealed that there are 9 ENVIROSTOR sites within approximately 1 mile of the target property.

SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the SLIC list, as provided by EDR, has revealed that there are 5 SLIC sites within

approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Local Lists of Registered Storage Tanks

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 2 SWEEPS UST sites within approximately 0.25 miles of the target property.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Amount (Lbs): 2941

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:

Waste code:

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF Waste name:

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

2687 Amount (Lbs):

Waste code: D002

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS Waste name:

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other

than drinking water), Soil

Potential Contaminants of Concern: Benzene, Toluene, Xylene, Gasoline

Site History:

Site Background The Goodyear Tire Store occupied the site between

1994 and June 2004. Waste materials were stored in a dumpster area located south of the former building and west of the Parasol building, which was occupied by a restaurant. Goodyear personnel also

used this area to work on cars, and stored containers of waste materials along the buildings wall. The pavement in this area was reported to be degraded. The property was redeveloped, and the Goodyear building was demolished in 2006. Investigation Activities A soil boring was drilled for geotechnical purposes, at a location several feet east of the dumpster and waste storage area. Vapor measurements detected hydrocarbons in the soil samples. In October 2004, WEI was contracted by the property owner, Century National Properties, Inc. (CNP), to investigate the site. WEI staff drilled two soil borings, P-S and P-GW. Soil samples were collected from soil boring P-S at five foot intervals, to a depth of 20 feet below ground surface (bgs). The soil samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-G) and volatile organic compounds (VOCs). TPH-G was detected in all four soil samples, ranging from 6.0 milligrams/kilogram (mg/kg) to 5,000 mg/kg. Benzene was also detected in all four samples, ranging from 0.063 mg/kg to 22 mg/kg. Elevated concentration of toluene, ethylbenzene, and xylene were also detected. Methyl tert-butyl ether (MTBE) or other oxygenate compounds were not detected in the soil samples. Groundwater was encountered at

23 feet bgs in boring P-GW. A water sample was collected using a Hydropunch sampler, and submitted for laboratory analysis for VOCs. The analytical results of the groundwater sample showed high concentrations of benzene at 12,000 microgram/liter (a%g/l), toluene at 18,000 a%g/l, ethylbenzene at 5,500 a%g/l, xylene at 31,000 a%g/l, 1,2-dichloroethane (1,2-DCA) at 480 a%g/l and naphthalene at 1,200 a%q/l. MTBE or other oxygenate compounds were not detected in the groundwater sample. A probe for collection of soil vapor sample was also installed in the area. No VOCs were detected in the soil vapor sample. In November 2004, WEI drilled eight additional soil borings (IR-1 through IR-4 and OR-1 through OR-4) for collection of soil and groundwater samples. The soil samples were analyzed for TPH and VOCs.

TPH concentrations ranged from <5 mg/kg to 1,200 mg/kg (10 foot

GOODYEAR (FORMER) WASTE DUMPSTER AREA AT ROSSMOOR CENTER (Continued)

S108201221

sample from boring IR-1). Benzene concentrations ranged from <0.0018 mg/kg to 4.6 mg/kg (10 foot sample from boring IR-1). Toluene, ethylbenzene, xylene,1,2,4-trimethylbenzene, and 1,3,5trimethylbenzene were also detected in the soil samples. Laboratory analysis of the groundwater samples found concentrations of benzene ranging from <2 to 180 a%g/l, 1,2-DCA ranging from <2.0 a%g/l to 13 a%g/l, and other VOCs. No VOCs were detected in the water samples from borings IR-4, OR-1, or OR-3. In 2006, SECOR International, Inc. (SECOR) was retained by Goodyear to evaluate the site. Eleven soil borings were drilled to determine the extent of petroleum contaminated soil. Benzene concentrations in the soil ranged from 0.004 mg/kg to 25 mg/kg. TPH-G ranged from <0.39 mg/kg to 23,000 mg/kg. Three of the eleven soil borings were drilled at an angle under the Parasol building. Concentrations of TPH-G (4,800 mg/kg) and TPH-diesel (210 mg/kg) were detected only in boring PO-01 in the 10 foot soil sample (8.7 feet bgs). No VOCs were detected. SECOR also installed two nested pairs of groundwater monitoring wells (MW-1 and MW-2). The wells were screened in two zones (upper 7 to 20 feet bgs and lower 25 to 40 feet bgs). Two additional boreholes were drilled and constructed as single cased wells VE-1 and VE-2. The wells were constructed of 4-inch PVC and screened at 25 to 40 feet bgs (VE-1) and 7 to 20 feet bgs (VE-2). SECOR conducted vapor extraction and dual phase extraction tests using these wells. The tests produced very low recoveries of soil vapor and groundwater and SECOR determine that the method was not a feasible remediation method. Soil Excavation September 2006, WEI was contracted by CNP to perform remedial activities at the Site. WEI selected excavation and offsite disposal as the initial remedial method. Soil was excavated to a depth of 20 to 22 feet to remove contaminated soil. Very moist soil was encountered at 18 feet bgs. The excavation could not be extended beyond 22 feet bgs do to slumping and caving of the moist sandy soil. Approximately 567 cubic yards of soil was removed from the excavation. The excavated soils were transported offsite to U. S. Ecology, Inc. in Beatty, Nevada for treatment and recycling. No confirmation soil or water samples were collected from the excavation, because soil vapor and groundwater extraction and treatment were expected to remove the residual concentrations of VOCs and petroleum compounds. The excavation was backfilled with pea gravel from 22 feet bgs to approximately 10 feet bgs. An impermeable plastic liner was placed on top of the gravel. Clean soil was placed on top of the liner to grade surface. Soil Vapor and Groundwater Extraction In October 2006, WEI installed three soil vapor and groundwater extraction wells (MW-3-W, MW-4-W and MW-5-W) in the former excavation. The boreholes were drilled to between 39 and 50 feet bgs. The wells were constructed of 4-inch diameter, schedule 40 PVC casing and slotted screen. The screens were set from the bottom of each borehole to between 9 and 12 feet bgs. Groundwater samples were collected and analyzed for TPH-G and VOCs. TPH-G concentrations ranged from 26,000 to 54,000 a%g/l (MW-5-W). Benzene concentrations ranged from 4,700 to 28,000 a%g/I (MW-4-W). Concentrations of 1,2-DCA ranged from 4.9 to 53.0 a%g/l (MW-3-W). Napthalene concentrations ranged from <1 to 500 a%g/l (MW-5-W). Toluene, ethylbenzene, xylene, 1,2,4 trimethylbenzene and 1,3,5 trimethylbenzene were also detected in the groundwater samples. WEI installed a soil vapor and groundwater extraction and treatment system. The wells that were installed in the former excavation area (MW-3-W, MW-4-W and MW-5-W) were hooked up to the treatment system. Extracted soil vapor was

S108201221

treated with a portable electric thermal/catalytic oxidizer. The extracted groundwater was placed in a 4,000-gallon above ground tank, and then was batch treated by passing it through activated carbon vessels before discharging it to the sanitary sewer. The SVE system was started on October 13, 2006, and the groundwater pump-and-treat system was brought on line on October 19, 2006. WEI collected soil vapor samples at the start of the SVE operation. Soil vapor at each well was initially screened with a Huruba Organic Vapor Analyzer, and the results were 1,200 parts per million by volume (ppmv) (MW-3-W), 1,500 ppmv (MW-4-W), and 800 ppmv (MW-5-W). On October 19, 2006, soil vapor samples were collected and submitted to a laboratory for analysis. The TPH-G vapor concentrations ranged from 110 ppmv (MW-5-W) to 1,200 ppmv (MW-4-W). Benzene vapor concentrations ranged from 0.62 ppmv (MW-5-W) to 9.20 ppmv (MW-4-W). Both treatment systems were shut down by January 11, 2007. Soil vapor and groundwater samples were collected from the three wells just prior to shut-down. TPH-G concentrations in soil vapor ranged from 26 to 69 ppmv and benzene concentrations ranged from non-detect to 0.62 ppmv. Analytical results for the groundwater samples also showed significant decreases in concentrations of benzene (ranging from 21 to 380 a%g/l) and TPH-G (ranging from 330 to 4,300 a%g/l). WEI estimated that the treatment system recovered and treated approximately 1.399 pounds of hydrocarbon vapor, and discharged 1,730,000 gallons of treated groundwater to the sanitary sewer. Verification sampling On February 9, 2007, WEI drilled three soil borings (VB-1 through 3), installed six soil vapor sampling points (SG-1 through 6), and advanced a boring (HP-1) for collection of a groundwater sample with a Hydropunch sampler. Soil vapor and groundwater samples were analyzed onsite at a mobile lab. The samples were analyzed for TPH-G by EPA method 8015m and VOCs by EPA method 8260B. Soil borings were advanced to approximately 30 feet bgs adjacent to the former excavation. Soil samples were collected at five foot intervals, starting at 10 feet. Analytical results for the soil samples showed concentrations of TPH-G and benzene in all of the samples. Benzene concentrations ranged from <1 to 50.3 mg/kg (VB-2). The deepest sample with the maximum benzene concentration of 6.6 mg/kg was collected at 30 feet from boring VB-2. TPH-G concentrations ranged from <0.200 to 48,000 mg/kg (VB-2). Six soil vapor probes were installed through the floor of the Parasol building to collect vapor samples at 5 feet bgs. The probes were completed with a sampling tube and a filter stone at the bottom. Soil gas samples were collected 24 hours after installation of the probes, and analyzed at an onsite mobile laboratory. VOCs and TPH-G were not detected above their respective detection limits. One additional boring was advanced inside the building, to a depth of 30 feet bgs, and a single groundwater sample was collected using a Hydropunch sampler. Benzene was detected at 3,510 a%g/l in the groundwater sample. WEI collected groundwater samples from all of the wells at the site in February and October 2007, and submitted them for laboratory analysis. In February the maximum benzene concentration detected was 7,810 a%g/l (VE-2) and in October the maximum benzene concentration detected was 8,800 a%g/l (MW-1L). In April 2007, WEI install three additional sets of nested groundwater monitoring wells (MW-6-W-U/L, MW-7-W-U/L, and MW-8-W-U/L) to the southwest, south and southeast of the former excavation. The initial groundwater samples were collected in October 2007, and only 1.2-DCA at 2.2 a%q/l was detected in well MW-6-W-U. Groundwater wells were monitored quarterly in 2009. In September 2009, benzene

S108201221

EDR ID Number

concentrations in the groundwater ranged from less than the detection limit (<1 a%g/l) to 17,000 a%g/l (MW-1L). Ozone Sparging Feasibility Test On October 13, 2009, an ozone sparging (OS) test was started. The purpose of the test was to assess the feasibility of using the OS methodology to treat the dissolved benzene in the groundwater under the site. Prior to conducting the test, WEI staff installed ozone injection points in the bottom of the upper (approximately 18 feet bgs) and bottom of the lower (approximately 38 feet bgs) screened zones of the groundwater monitoring well MW-1. Ozone gas and air were injected for 30-minute intervals, alternating between the upper and lower screened zones of well MW-1. The flow rate was between 1.0 to 1.5 cubic feet per minute, and the applied pressure was between 16 and 45 pounds per square inch. The OS system was monitored bi-weekly for applied pressure, flow rate, and pressure at the test well. Dissolved oxygen levels were monitored in wells MW3-W, MW-4W, MW5-W, VE-1, VE-2, MW-2-WU, MW-2-WL, MW-6-WU and MW-6WL approximately every two weeks. The test ended on January 12, 2010. The results of the test showed increased dissolved oxygen concentrations in groundwater monitoring well MW-4-W, located approximately 15 feet east of well MW-1. Increased dissolved oxygen concentration were also observed in the lower part of the screened zone of well MW-5-W, located approximately 15 feet to the west of well MW-1. Decreases in benzene concentrations were observed in well MW-4-W. Two rounds of groundwater monitoring have taken place since the end of the OS test. Groundwater samples were collected January 1 and March 18, 2010. Benzene and other VOC concentrations have decreased in all the wells except VE-1. Benzene concentrations in March ranged from less than the detection limit to 4,000 a%g/l. TPH-G concentrations have also decreased, except in well VE-1. TPH-G concentration in March ranged from less than the detection limit to 37,000 a%g/l. Groundwater samples collected in March from well MW-1U showed an increase in TPH-G and benzene concentrations. Ozone sparging points installed in six wells upper and lower zones of wells MW-1, MW-9-W and MW-10-W. Full scale ozone sparging system was operated from September 3, 2010 to March1, 2012. After shut of the sparging system the verification monitoring of the groundwater was performed between March 2012 aand June 2014. Soil vapor and soil matrix samples were collected in January 2013. No VOC were detected in the soil vapor samples. Two direct-push borings were advance to between 84 and 90 feet bgs and groundwater samples were collected in four depths from each boring. Low concentations less than 5 ppb benzene, toluene ethylbenzene, 1,2,4 trimethylbenzene and 1,3,5 trimethylbenzene were detected at approximately 50 and 70 feet bgs. May 18, 2016 No Further Action letter

BEST CLEANERS (Continued)

S102811701

Potential Media Affected: Potential Contaminants of Concern: Site History:

Aquifer used for drinking water supply * Solvents, Tetrachloroethylene (PCE)

Update as of November 2012 Best Cleaners is located at 11139 Los Alamitos Boulevard, Los Alamitos, California. The site is located within a commercial shopping center situated immediately southwest of the intersection of Los Alamitos Boulevard and Katella Ave. A dry cleaning facility doing business as Best Cleaners currently operates at the site. In 2002, soil and groundwater underlying the subject site were identified as having been impacted with tetrachloroethene (PCE). Five subsurface investigations conducted between 2002 and 2007 helped define the horizontal and vertical extent of PCE-impacted soil and groundwater. The site is located approximately 24 feet above mean sea level. Surface elevation contours within the site vicinity indicate that the site and vicinity are sloping gently toward the southwest. In January of 2010, Black Rock Geosciences, on behalf of the property owners, implemented a bio-enhanced remediation project at Best Cleaners. The project included the injection of hydrogen releasing compound (HRC) into soil and groundwater underlying the subject site to remediate the elevated concentrations of tetrachloroethene (PCE). PCE concentrations are above MCLs, and Vinyl Chloride (VC) at the site have increased three orders of magnitude. The owner of the dry cleaners is closely monitoring the VC at the site. If necessary, the owner may implement another round of HRC injections to further degrade the VC concentrations. The injection of a hydrogen-releasing compound (HRC) was proposed by Black Rock Geosciences to accelerate the bioremediation of PCE underlying the site. This remedial method, approved by the Regional Board, was conducted on December 28, 2009. It included injecting 1,620 pounds of HRC into the underlying contaminant plume. Best Cleaners, located in Los Alamitos, California, is undergoing a site assessment due to the presence of tetrachlorethene (PCE) at the site. The site is a dry cleaning facility that has clothing, cleaning, drying, and pressing equipment on-site. The concerns at the site are regarding the PCE and its breakdown products. The break down products of PCE may pose a threat to groundwater quality. PCEs byproducts are 1, 2 dichlorothene (DCE), vinyl chloride, and ethane. The Conceptual Site Model for this site addresses the nature and extent of subsurface contaminants beneath the site, and evaluates the potential transport of these contaminants and their possible impact to human health, the environment, and the beneficial uses of water resources. Background of the Constituents Tetrachloroethene, also known as PCE, is the main constituent that has been released at the Best Cleaners site. PCE is a synthetic liquid chemical which is commonly used in dry cleaning, metal degreasing, and fabric manufacturing. In this specific case, tetrachloroethene is present due to the dry cleaning processes that are carried out at the site. PCE in liquid and solid wastes has the ability to migrate to groundwater, where it may remain there for months to years. One of the concerns with this particular site is the presence of PCEs toxic degradation products, trichloroethylene and vinyl chloride. Trichloroethylene can have acute and chronic effects on humans after exposure. PCE effects from inhalation include dizziness, forgetfulness, and reaction time/visual changes. When ingested, PCE is associated with lower birth weights and birth defects. Carcinogenic effects may also be present in those exposed to PCE. Trichloroethene (TCE) and vinyl chloride are also constituents of concern at the Site. TCE is a known human carcinogen and may cause birth defects. Vinyl chloride is a known human carcinogen and

S102811701

genotoxicant. After exposure, this constituent may cause chemical alternations of DNA in tissues that may lead to cancer. It is known to be a human carcinogen and genotoxicant. Remediation Methods In order to remediate the situation at Best Cleaners, a hydrogen releasing compound (HRC) was released at the site. The purpose of this was to expedite the biological degradation process of the chlorinated contaminants. Regenesis is the name of the company that provided the scientific technology to create the enhanced anaerobic bioremediation. According to Regenesis, HRC can be used to degrade a range of chlorinated compounds such as PCE, TCE, TCA and their breakdown products. The initial site investigation began in September 2002. Geoprobe borings were used to determine whether or not the presence of PCE was present in the sample. The results showed that PCE was present. A month later, in the month of November 2002, another soil investigation was conducted. PCE was also detected in this months results and high concentrations were found to be within a relative distance to groundwater, therefore, it is likely that groundwater had been impacted. The company, National Environmental Consultants, conducted these two investigations. In 2003, another company, Harrison Roberts Environmental Management conducted another investigation of the site. This investigation involved the installment of monitoring wells and usage of soil borings. With the addition of the wells, groundwater samples were able to be collected. sampled and analyzed for VOCs. PCE was found to be present in the groundwater samples from the borings. An additional boring sample that was down-gradient from the dry cleaners site also showed signs of contamination. In September 2007, BRG conducted the fourth soil and groundwater investigation for this site. Samples were collected from five borings that were at a depth of 40 feet; samples were taken at five feet intervals for each boring. Evaluation of the soil samples was done by EPA Method 8260B. According to the EPA, Method 8260B is used to determine volatile organic compounds in a variety of solid waste matrices. This method is applicable to nearly all types of samples, regardless of water content, including various air sampling trapping media, ground and surface water, aqueous sludges, caustic liquors, acid liquors, waste solvents, oily wastes, mousses, tars, fibrous wastes, polymeric emulsions, filter cakes, spent carbons, spent catalysts, soils, and sediments. (www.epa.gov) Analysis of the Site Risks Due to the nature of the constituents and the threat to water quality, in 2007, the Regional Water Quality Control Board requested that a remedial action plan be put in place for this site. The major concern for the site was to eliminate the present VOCs in the soil and groundwater. Vapor extraction technology was suggested as a viable means for alleviating the soil and groundwater contamination; however there was some concern, due to the clay nature of the soil. A conceptual site model was put together for this site in order to address the issues regarding contaminants at the Best Cleaners site. This CSM model was used in order to discuss what impacts these contaminants may have to human health, the environment, and water resources. Upon assessment, it was determined that the source of the contaminants was a dry cleaning machine in the southwestern portion of the dry cleaning facility. The highest concentrations of contaminants were located adjacent to the machine. The Regional Water Quality Control Board determined that the horizontal and vertical extent of impacted soil had been adequately defined. In 2008, the estimated mass of PCE was about 8.1 pounds of PCE. Including breakdown products, the total mass was estimated at

Direction Distance

EDR ID Number Elevation Site Database(s) **EPA ID Number**

BEST CLEANERS (Continued)

S102811701

about 14.7 pounds. TCE, 1,2-DCE, and vinyl chloride concentrations found at the site exceed their Maximum Contaminant Levels. Analysis of the values in the tables provided in the CSM indicates that the breakdown products dichloroethene and vinyl chloride have the greatest threat to groundwater quality. The CSM states, The highest cis-1,2-DCE and vinyl chloride concentrations reported during 2011 were 153 and 860 times their maximum contaminate levels, respectively. According to the CSM, the clayey nature of the soil inhibits volatilization and migration to the soil surface. Commercial and retail businesses are located within 200 feet of the site. Residential apartments are located approximately 67 feet west of the site. Due to the close proximity of these businesses and residences, it is important to evaluate how much of a risk these breakdown products will have towards human health. Assessment of indoor air is proposed for the buildings on Site, along with a human health risk assessment to determine potential risks to human health. Off-site groundwater investigations have been conducted to delineate the extent of the VOC plume in groundwater.

Completed Info:

Completed Area Name: PROJECT WIDE
Completed Sub Area Name: Not reported
Completed Document Type: RFI Workplan
Completed Date: 12/02/2009

Comments: The Work Plan included plans to install an additional groundwater

monitoring well to determine the vertical extent of groundwater

contamination. The Work Plan was approved, but comments were included by DTSC to obtain concurrence with DTSC before abandoning any wells.

Environmental Interest/Information System

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Elevation: 22 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map: 5633745 LOS ALAMITOS, CA

Version Date: 2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

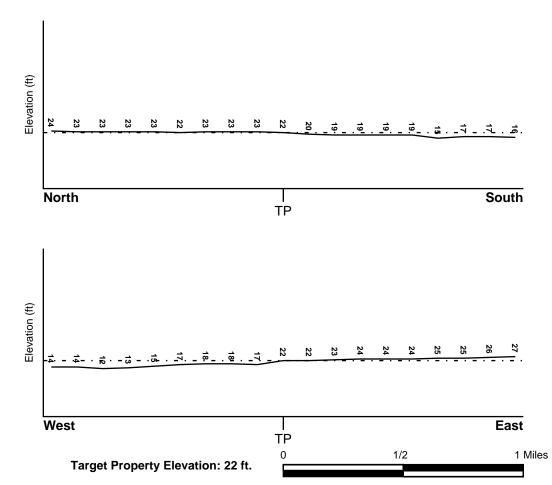

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Additional Panels in search area: FEMA Source Type

06037C2000F FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property Data Coverage

LOS ALAMITOS YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius: 1.25 miles
Location Relative to TP: 1 - 2 Miles NNE

Site Name: FEDERAL MOGUL CORP-ARROWHEAD PRODUCTS

Site EPA ID Number: CAD008302002

Groundwater Flow Direction: S TO SW ON A REGIONAL BASIS. Inferred Depth to Water: 15 to 20 feet in the perched aquifer.

Hydraulic Connection: The shallow perched aguifer is underlain by the Artesia water table

aquifer at a depth of 40 to 100 feet. Lower aquifers are separated by

confining layers.

Sole Source Aquifer: No information about a sole source aquifer is available

Data Quality: Information is inferred in the CERCLIS investigation report(s)

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

LOCATION GENERAL DIRECTION
MAP ID FROM TP GROUNDWATER FLOW

GEOCHECK[®] - PHYSICAL SETTING SOURCE SUMMARY

	LOCATION	GENERAL DIRECTION

6G	1/2 - 1 Mile SSE	Varies

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: BOLSA

Soil Surface Texture: silt loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward

movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information								
Boundary				Classification		Saturated hydraulic		
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	conductivity micro m/sec	Oon Reaction	
1	0 inches	11 inches	silt loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9	
2	11 inches	68 inches	silty clay loam	Not reported	Not reported	Max: 4 Min: 1.4	Max: 8.4 Min: 7.9	

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory Source: Department of Fish & Game

Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

EDR Inquiry # 5177572.3 Contact: Jacquelyn Harrington

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

o. can wind dispersion	5a. If so, please note and observe the location.
6 Doos on adjacent no	on-ARNG PFAS source exist?
o. Does all adjacent no	6a. If so, please note the source and location.
	van 22 50, presse note the source and rocation.
	6b. Will off-site reconnaissance be conducted? Y(N)
	N/A Page 2 of 4

Significant Topographical Features:
1. Has the infrastructure changed at the site/area? Y/N
1a. If so, please describe change (ex. Structures no longer exist): UNK - FOUOV-UP
RE: STRUCTURE WHERE AFFFUSED FOR
BGE GONTEOL/ELIMIN BUILDII
2. Is the site/area vegetated? 2a. If not vegetated, briefly describe the site/area composition:
CONCRETE HARDSLAPE
3. Does the site or area exhibit evidence of erosion?
3a. If yes, describe the location and extent of the erosion:
4. Does the site/area exhibit any areas of ponding or standing water?
4a. If yes, describe the location and extent of the ponding:
BUT LIKELY LOGALIZED ON
LANC. SFCS, DURING PAIN
Receptor Information
1a. If so, please note to what extent: APNG CLEASE HOLDERS ONLY
(Site Workers / Construction Workers / Trespassers / Residential / Recreational
2. Who can access the site? Users/Ecological
2a. Circle all that apply, note any not covered above:
3. Are residential areas located near the site?
3a. If so, please note the location/distance:
4. Are any schools/day care centers located near the site? Y/N
4a. If so, please note the location/distance/type:
CHECK EPR
5. Are any wetlands located near the site? Y/N
5a. If so, please note the location/distance/type:
CHECK EDR

Appendix B.3 Conceptual Site Model Information

Preliminary Assessment – Conceptual Site Model Information

Site Name: Joint Forces Training Base, Los Alamitos, California

Why has this location been identified as a site?

Interviews indicated that AFFF has been used for training and emergency response at the site along with other uses and testing of fire suppression systems

Are there any other activities nearby that could also impact this location?

• Arrowhead Products/Federal Mogul (hydraulically upgradient)

Training Events

Have any training events with AFFF occurred at this site? Yes

If so, how often? Currently once a month

How much material was used? Is it documented? *Unknown*

Identify Potential Pathways: Do we have enough information to fully understand over land surface water flow, groundwater flow, and geological formations on and around the facility? Any direct pathways to larger water bodies?

Surface Water:

Surface water flow direction? Generally to the South and West

Average rainfall? 12 inches annually on average

Any flooding during rainy season? Yes

Direct or indirect pathway to ditches? Yes

Direct or indirect pathway to larger bodies of water? Yes

Does surface water pond any place on site? Yes

Any impoundment areas or retention ponds? Yes

Any NPDES location points near the site? Yes

How does surface water drain on and around the flight line?

Surface water in the vicinity of the WEF FTA drains to the WDD. The ditch is approximately 1,100 feet to the west of the WEF FTA and nozzle testing area, immediately west (hydraulically downgradient) of which is a residential community.

Preliminary Assessment – Conceptual Site Model Information

Groundwater: Groundwater flow direction? Southwest Depth to groundwater? 4-18 feet TOC Uses (agricultural, drinking water, irrigation)? *Unknown* Any groundwater treatment systems? Yes Any groundwater monitoring well locations near the site? Yes Is groundwater used for drinking water? Yes Are there drinking water supply wells on installation? (hydraulically cross or upgradient of JFTB LA) Do they serve off-post populations? Yes Are there off-post drinking water wells downgradient *Unknown* **Waste Water Treatment Plant:** Has the installation ever had a WWTP, past or present? No If so, do we understand the process and which water is/was treated at the plant? *Unknown* Do we understand the fate of sludge waste? *Unknown* Is surface water from potential contaminated sites treated? *Unknown* **Equipment Rinse Water** 1. Is firefighting equipment washed? Where does the rinse water go? *Unknown* 2. Are nozzles tested? How often are nozzles tested? Where are nozzles tested? Are nozzles cleaned after use? Where does the rinse water flow after cleaning nozzles? Yes, Testing monthly, surface water drains to WDD 3. Other?

Preliminary Assessment – Conceptual Site Model Information

Identify Potential Receptors:
Site Worker
Construction Worker
Recreational User
Residential
Child
Ecological
Note what is located near by the site (e.g. daycare, schools, hospitals, churches, agricultural, livestock)?
Documentation
Ask for Engineering drawings (if applicable).
Has there been a reconstruction or changes to the drainage system? When did that occur? <i>Unknown</i>
