Notes:	Approximately 25 acre vacant area with one 2-3 acre lot occupied by Semple building Movers Company. The area has been filled with fly ash, river dredge, demolition materials, and off-site soils. In addition, a portion of the Site was formerly used as a salvage yard, and bulk petroleum storage tanks existed on and near parts of the Site before the 1980s. Low levels of PAHs were detected in the groundwater at an adjoining property in 1996. A Phase II Investigation was intiated on the Site by Wenck Associated in May 1998. Wenck's Phase II Workplan was approved by the MPCA VIC staff before work began. The Phase II Investigation report was submitted to the MPCA on July 16, 1998. The results indicate widespread low to moderate PAH, lead, arsenic, and DRO imapcates to soil and groundwater across the most of the Site. Additional Proposed Actions (to include excavation of soil for protective posts around navigation light standards) for Semple Building Movers Parcel and Parcel A approved by MPCA 8-7-98.

petroleum storage tanks existed on and near parts of the Site before the 1980s. Low levels of PAHs were detected in the groundwater at an adjoining property in 1996. A Phase II Investigation was intiated on the Site by Wenck Associated in May 1998. Wenck's Phase II Workplan was approved by the MPCA VIC staff before work began. The Phase II Investigation report was submitted to the MPCA on July 16, 1998. Additional Proposed Actions (to include excavation of soil for protective posts around navigation light standards) for Semple Building Movers Parcel and Parcel A approved by MPCA 8-7-98.

METRO DEAF SCHOOL (Continued) **1007103695**

LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

. Waste code: D002
. Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Property Description:	This property was never developed; the surrounding area was undeveloped until the early 1920s. From the early 1920s until the mid 1950s (according to Ramsey County records and records at the Minnesota Pollution Control Agency), the area (including the property) was used as a dump for disposal of waste materials. The dump was operated by the City of St. Paul, a separate legal entity from the Port Authority. The Port Authority purchased the Hmong Funeral Home property in the late 1960s after dumping operations were ceased. The property has been vacant since that time.
