Executive Summary

The Army National Guard (ARNG) is performing Preliminary Assessments (PAs) and Site Inspections (SIs) for Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) Impacted Sites at ARNG Facilities Nationwide. A PA for per- and polyfluoroalkyl substances (PFAS)-containing materials was completed for Blair Hangar Army Aviation Operations Facility (AAOF; also referred to as the "facility") in St. Croix, US Virgin Islands to assess potential PFAS release areas and exposure pathways to receptors. Limited information regarding the historical use of Blair Hangar AAOF by the Virgin Islands ARNG (VIARNG) was found during the PA. The earliest known VIARNG occupancy at the facility goes back to 1977. Real estate documentation and leasing agreements were not available to the time of the PA. The performance of this PA included the following tasks:

- Conducted a site visit on 17 October 2019 and completed visual site inspections at locations where PFAS-containing materials were suspected of being stored, used, or disposed;
- Interviewed current and former VIARNG personnel and operations staff;
- Developed a preliminary conceptual site model (CSM) to outline the potential release and pathway of PFAS for the Area of Interest (AOI) and the facility.

One AOI related to a potential PFAS release was identified (**Table ES-1**) at Blair Hangar AAOF during the PA (**Figure ES-1**).

Area of Interest	Name	Used by	Potential Release Dates
AOI 1 Tri-Max™ Training Area and AFFF Storage Area		VIARNG	Early-2000s - 2016

Table ES-1: AOI at Blair Hangar AAOF

Based on potential AFFF release at this AOI, there is potential for exposure to PFAS contamination in surface soil, subsurface soil, and groundwater to site workers, construction workers, and trespassers at the facility. The preliminary CSM for Blair Hangar AAOF, which presents the potential receptors and media impacted, is shown in **Figure ES-2**. Based on the US Environmental Protection Agency (USEPA) Unregulated Contaminant Monitoring Rule 3 (UCMR 3) data, it was indicated that no PFAS were detected in a public water system above the USEPA lifetime Health Advisory level within 20-miles of the facility. PFAS analyses performed in 2016 had method detection limits that were higher than currently achievable. Thus, it is possible that low concentrations of PFAS were not detected during the UCMR3 but might be detected if analyzed today.

1. Introduction

1.1 Authority and Purpose

The Army National Guard (ARNG) G9 is the lead agency in performing Preliminary Assessments (PAs) and Site Inspections (SIs) for Perfluorooctanesulfonic acid (PFOS) and Perfluorooctanoic acid (PFOA) at Impacted Sites at ARNG Facilities Nationwide. This work is supported by the United States (US) Army Corps of Engineers (USACE) Baltimore District and their contractor AECOM Technical Services, Inc. (AECOM) under Contract Number W912DR-12-D-0014, Task Order W912DR17F0192, issued 11 August 2017.

The ARNG is assessing potential effects on human health related to processes at facilities that used per- and polyfluoroalkyl substances (PFAS), primarily in the form of aqueous film forming foam (AFFF) released as part of firefighting activities, although other PFAS sources are possible. In addition, the ARNG is assessing businesses or operations adjacent to the ARNG facility (not under the control of ARNG) that could potentially be responsible for a PFAS release.

PFAS are classified as emerging environmental contaminants that are garnering increasing regulatory interest due to their potential risks to human health and the environment. PFAS formulations contain highly diverse mixtures of compounds. Thus, the fate of PFAS compounds in the environment varies. The regulatory framework at both federal and state levels continues to evolve.

This report presents the findings of a PA for PFAS-containing materials at Blair Hangar Army Aviation Operations Facility (AAOF) (referred to as 'the facility') in St. Croix, US Virgin Islands, in accordance with the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA; USEPA, 1980), as amended, the National Oil and Hazardous Substances Pollution Contingency Plan (40 Code of Federal Regulations [CFR] Part 300; USEPA, 1994), and Army requirements and guidance.

This PA documents the known or suspected locations where PFAS may have been released into the environment at Blair Hangar AAOF. The term PFAS will be used throughout this report to encompass all PFAS chemicals being evaluated, including PFOS and PFOA, which are key components of AFFF.

1.2 Preliminary Assessment Methods

The performance of this PA included the following tasks:

- Reviewed available administrative record documents and Environmental Data Resources, Inc. (EDR)[™] report packages to obtain information relevant to potential PFAS releases, such as: drinking water well locations, historical aerial photographs, Sanborn maps, and environmental compliance actions in the area surrounding the facility;
- Conducted a site visit 17 October 2019 and completed visual site inspections (VSIs) at locations where PFAS-containing materials were suspected of being stored used or disposed;
- Interviewed current and former Virgin Islands ARNG (VIARNG) personnel and operations staff;
- Developed a preliminary conceptual site model (CSM) to outline the potential release and pathway of PFAS for the Area of Interest (AOI) and the facility.

1.3 Report Organization

This report has been prepared in accordance with the USEPA *Guidance for Performing Preliminary Assessments under CERCLA* (USEPA, 1991). The report sections and descriptions of each are as follows:

- Section 1 Introduction: identifies the project purpose and authority and describes the facility location, environmental setting, and methods used to complete the PA.
- Section 2 Fire Training Areas: describes the fire training areas (FTAs) at the facility identified during the site visit.
- Section 3 Non-Fire Training Areas: describes other locations of potential PFAS releases at the facility identified during the site visit.
- Section 4 Emergency Response Areas: describes areas of potential PFAS release at the facility, specifically in response to emergency situations.
- Section 5 Adjacent Sources: describes sources of potential PFAS release adjacent to the facility that are not under the control of ARNG.
- Section 6 Preliminary Conceptual Site Model: describes the pathways of PFAS transport and receptors for the AOIs and the facility.
- Section 7 Conclusions: summarizes the data findings and presents the conclusions of the PA.
- Section 8 References: provides the references used to develop this document.
- Appendix A Data Resources
- Appendix B Preliminary Assessment Documentation
- Appendix C Photographic Log

1.4 Site Location and Description

Blair Hangar AAOF is located on the south coast of the island of St. Croix, located approximately 45 miles south of Charlotte Amalie, St. Thomas (capital of the US Virgin Islands). The island of St. Croix is the largest of the three islands included in the US Virgin Islands group and is approximately 21 miles long and 6 miles at its widest. The facility is an inactive support installation situated on approximately 1.25 acres (**Figure 1-1**) located adjected to the Henry E. Rohlsen International Airport. The facility is surrounded by commercial facilities supporting operation of the airport and air services.

Limited information regarding the historical use of Blair Hangar AAOF by the VIARNG was found during the PA. The earliest known VIARNG occupancy at the facility goes back to 1977. According to VIARNG personnel, Blair Hangar was built in 1991. The facility maintained both fixed-wing and rotary-wing aircraft; however, more exact details were not provided. Maintenance activities at the facility continued until December 2017, when Hurricane Maria struck St. Croix and left Blair Hangar in disrepair. Since that time, Blair Hangar has not been continuously occupied or used by the VIARNG. Real estate documentation and leasing agreements were not available to the time of the PA.

1.5 Site Environmental Setting

The island of St. Croix is generally characterized by mountainous areas in the north and east that are flanked by rolling plains to the south. The northern mountainous range dips steeply to the sea and forms the northern spine of the island. The eastern range mountains are less rugged and are separated by broad low-lying areas (US Geological Survey [USGS], 2002). A nearly flat to gently-rolling land surface characterizes the plains to south and southwest of the facility.

As seen in **Figure 1-1**, the facility is located within the plain in the south-central portion of the island immediately adjacent to the Caribbean Sea (USGS, 1996). The topography across the facility is generally flat and is at approximately 75 feet mean sea level (msl). Much of the facility is paved with either asphalt or concrete. Unpaved grassy areas are present along the sides of the hangar, apron, and parking area.

1.5.1 Geology

The geology of St. Croix includes surficial alluvial deposits with deeper carbonate and volcanic parent rock. The north and east mountainous areas are underlain by consolidated volcanic rock and sedimentary strata that include volcanic flows and breccia. These formations more specifically consist of fine- to coarse-grained tuffaceous sandstone, lapilli tuff, and mudstone (Whetten, 1966; Whetten, 1974). The observed volcanic rock is blue to olive gray in color, dense, and is folded and faulted due to the island-arc accretion that formed the island.

Closer to the facility, within the central plain, the subsurface geology is comprised of a thin layer of alluvial deposits underlain by the Kingshill Limestone and Jealousy Formation (**Figure 1-2**). The surficial alluvial deposits are composed of gravel, sand, silt, and clay ranging in thickness from 8 to 76 feet across the plain (USGS, 1996). Generally, the thickness of the alluvial deposits increases with distance from the northern mountainous area. Underlying the alluvial deposits is the Kingshill Limestone, which consists of calcareous sediments of limestone and minor dolomite of Pliocene age with some silt, sand, and gravel. The formation dips to the southeast and is approximately 50 to 217 feet thick across the plain depending on location. The formation is dominated by planktonic foraminifera-rich carbonate muds, giving it a white to buff appearance (USGS, 2002). Underlying the Kingshill Limestone marl, calcareous clay, and some conglomerate (several thin layers). There is no significant difference between the Jealousy Formation and the Kingshill Limestone aside from color, as the Jealousy Formation is blue-gray (USGS, 2002).

1.5.2 Hydrogeology

Groundwater underlying the facility is found in the alluvial deposits and Kingshill Limestone. The alluvial deposits are moderately permeable and act as temporary storage for rainfall, which is the primary source of recharge for the shallow aquifer (USGS, 1950). Information obtained from several reports that gauged existing public drinking water wells and private wells in the southern plain was assessed to determine depth to groundwater. Depths to water within the alluvial deposits across the plain ranged from 5 to 68 feet below ground surface (bgs) (USGS, 1950; USGS, 1995). The well field in closest proximity to the facility (Golden Grove Well Field) ranges from 13 to 43 feet bgs (USGS, 1995). In areas where the alluvial deposits are saturated, the surficial alluvial aquifer is hydraulically connected to groundwater in the Kingshill Limestone beneath. For this reason, the top of the Jealousy Formation is considered to be a confining layer and the bottom of the hydrologic unit (USGS, 1995). The general direction of regional groundwater flow across the plain is south-southeast toward the coast (**Figure 1-2**). No information was found regarding groundwater flow at the facility; however, it is likely similar to the regional groundwater flow, as there are no significant pumping wells identified within 0.5 miles. Several well fields exist

within 1 mile of the facility to the north and east. The nearest of these well fields (Golden Grove) is located approximately 0.75 miles upgradient of the facility to the northeast, and Fairplains is located approximately 1-mile upgradient/cross-gradient to the east.

1.5.3 Hydrology

Limited surface water features exist on St. Croix. Most streams on the island originate in the northern mountainous range and flow intermittently. Stream flow rarely reaches the sea before infiltrating into the alluvial deposits (USGS, 1975). The closest stream feature to the facility is the River Gut system, which is approximately 0.75 miles to the north. Storm runoff is usually a significant part of stream flow on the island. Runoff peaks in the hours after the start of a storm and recede rapidly. There are no surface water features within the facility boundary (**Figure 1-3**).

Within the boundaries of the facility are a network of exterior stormwater drains. The drain system is used to collect stormwater and convey it from the apron to the grassy area surrounding the hangar. According to VIARNG personnel, the system is similar to a French drain and contains a gravel bottom to facilitate infiltration (**Appendix B**). Between 2013-2015, a catch basin was added to the drainage system to facilitate infiltration and evaporation after storm events.

Drinking water for Blair Hangar AAOF comes from precipitation captured from the roof of the hangar and is stored in two concrete underground cisterns (**Figure 1-3**). During the PA research, as-built drawings were not provided for the cisterns; it is unknown how deep the cisterns are set. Without more specific groundwater level data for the site, it is unclear if the cisterns are in communication with groundwater. Neither cistern is recharged by or in communication with groundwater. At the time of the site visit, the facility was not occupied, and no personnel were using the water. Based on a review of the USEPA Unregulated Contaminant Monitoring Rule 3 (UCMR 3) data, no public water supply has been sampled on the island. PFAS analyses performed in 2016 had method detection limits that were higher than currently achievable. Thus, it is possible that low concentrations of PFAS were not detected during the UCMR3 but might be detected if analyzed today.

PFAS sampling from both cisterns was performed under the direction of the ARNG in June 2017 to assess the potential presence of PFAS in this drinking water source. One sample was collected from each cistern and analyzed using USEPA Method 537 Modified. Results are provided in **Table 1-1** below. A total of 18 PFAS compounds were analyzed for. Only 6 PFAS analytes had detections; all other analytes were non-detect. All the results for PFOA and PFOS were below the HA of 70 nanograms per liter (ng/L).

Analyte	East Cistern Result (ng/L)	South Cistern Result (ng/L)
Perfluorobutanoic acid (PFBA)	8.09 M	6.29 J
Perfluorohexanoic acid (PFHxA)	1.07 J M	0.786 J M
Perfluorooctanesulfonic acid (PFOS)	1.70 J	ND
Perfluorooctanoic acid (PFOA)	0.903 J M	ND
Perfluoropentanoic acid (PFPeA)	ND	5.31 J M
Perfluorotetradecanoic acid (PFTeA)	0.414 J	0.538 J

Table 1-1: June 2017 Blair Hangar Drinking Water Sampling Results

J - The analyte was positively identified and the result is usable; however, the analyte concentration is an estimated concentration.

M - Manual integrated compound.

ND - non-detect

Note – only detections shown

1.5.4 Climate

The climate of St. Croix is tropical, with clearly defined wet and dry seasons. Hot and humid weather is common between May and November, with high temperatures between 88 and 90 degrees Fahrenheit (°F) and low temperatures between 77 and 79 °F. During the cooler months (December-April), high temperatures reach 82 to 84 °F, with low temperatures reaching 72 to 73 °F. Most rainfall occurs during the rainy season, between May and November, and averages approximately 40 to 47 inches annually (Climates to Travel, 2019). The rainy season coincides with the Atlantic Ocean hurricane season, which lasts from June to November. Tropical storms and hurricanes have the highest probability of forming in the months of August, September, and October. These storms have the potential to bring strong winds and torrential rain.

1.5.5 Current and Future Land Use

Blair Hangar AAOF is currently unused by the VIARNG and has not been an occupied since Hurricane Maria struck St. Croix in September 2017. The facility is gated but holes were found to exist in the perimeter fencing during the site visit. Because the facility is not occupied, there are no security guards or constant presence at the site which would prevent potential trespassers from accessing the facility. Future land use is not expected to change; however, the VIARNG intend to keep the property per the existing real estate agreements.

2. Fire Training Areas

One FTA where AFFF was potentially released was identified during the PA. A description of the FTA is presented below and, and the FTA is shown on **Figure 2-1**.

2.1 Tri-max[™] Training Area

According to VIARNG personnel, regular training exercises were performed using Tri-Max™ 30 portable fire extinguishers. Multiple VIARNG personnel confirmed the facility had two Tri-Max™ 30 units that were used for training on an annual basis since the early-2000s until 2016 (Appendix B). After 2016, training records and personnel accounts of training were incomplete and unavailable at the time of the PA. Training consisted of spraying AFFF against the outside (and occasionally inside) of the northwest hangar bay door in a sweeping motion. The reported volume of AFFF released during the training exercises ranged from 1-2 gallons to the entire 30-gallon tank. After completion of the training, the expended AFFF was sprayed with water into the drain system surrounding the apron on the north side of the hangar (Appendix B). The drain was described as a French drain that would allow runoff to easily evaporate or infiltrate into the subsurface. Between 2013-2016, a catch basin was added to the drain system to facilitate infiltration and evaporation after storm events. Floor drains were observed inside the hangar and would have likely captured any AFFF or any other liquids released inside the hangar. No as-builts or construction drawings were found during the PA, so it is unclear whether the floor drains inside the hangar are connected to the municipal storm drain system located under the main road south of the hangar.

3. Non-Fire Training Areas

In addition to FTAs, the PA evaluated areas where PFAS-containing materials may have been broadly used, stored, or disposed. This may include buildings with fire suppression systems, paint booths, AFFF storage areas, and areas of compliance demonstrations. Information on these features obtained during the PA are included in **Appendices A** and **B**. One non-FTA where AFFF was stored and potentially released was identified during the PA. A description of the non-FTA is presented below and the non-FTA shown on **Figure 3-1**.

3.1 AFFF Storage Area

AFFF used in the Tri-Max[™] 30 units was stored in the chemical storage sheds in the northwest corner of the facility. According to VIARNG personnel, two 5-gallon buckets of AFFF were typically stored in the chemical storage sheds. The timeframe of use and storage of AFFF at the facility were unknown at the time of the PA. Additionally, the manufacturer and type of AFFF were not known, and previous Safety Data Sheets (SDS) were lost during Hurricane Maria. Information regarding refilling or servicing of the Tri-Max[™] units was unknown at the time of the PA interviews. Because AFFF was present within the storage sheds, and little institutional knowledge regarding the handling and transfer of AFFF was available at the time of the PA, it is possible that AFFF may have been incidentally been released in this area.

4. Emergency Response Areas

No emergency response areas were identified within or associated with the facility during the PA through interviews or document review. The Aircraft Rescue and Firefighting (ARFF) team would handle any potential fire or emergency response incidents at Blair Hangar AAOF.

5. Adjacent Sources

Through document review and interviews, several potential off-facility PFAS sources located adjacent to the facility were identified during the PA (**Appendix A** and **Appendix B**). Descriptions of the off-facility sources are presented below and are shown on **Figure 5-1**.

5.1 Former ARFF Fire Training Areas

Fire training activities were conducted by the ARFF team at several locations surrounding the Henry E. Rohlsen International Airport runway. Two FTAs were identified by the ARFF Chief and were located on undeveloped land on the eastern side of the airport. One was located on the northeast side of the runway and another on the southeast of the runway. The exact years of operation and use were not known; however, the ARFF Chief recalled that both locations were used from the late-1990s through the early-2000s (**Appendix B**). During this period, training occurred multiple times a year. Typical fire training activities consisted of igniting a petroleum-based fuel (avgas, diesel, or gel) and extinguishing it using AFFF. It is assumed these training activities occurred using firetrucks and not portable units; however, no specific details regarding the source of AFFF were found during the PA. According to the ARFF Chief, secondary containment was used during these fire training exercises. It is not known if the secondary containment fully captured all AFFF sprayed during training. Additionally, it is unknown what happened to the propellent and remaining AFFF in the secondary containment after the training exercises.

5.2 ARFF Stations

The current ARFF station opened in 2018 and is located approximately 1,100 feet west of Blair Hangar AAOF. The station houses two firetrucks that each store approximately 200 gallons of AFFF. According to the ARFF Chief, twice that amount of AFFF is also stored at the station per Federal Aviation Administration (FAA) regulations. The AFFF is stored within a closet in the ARFF station.

Prior to 2018, the ARFF station was located approximately 2,100 feet east of Blair Hangar AAOF and was in operation from 1967-2018. Little information was obtained during the PA regarding the former ARFF station; however, the ARFF Chief did confirm that the former station stored AFFF within the building and in firetrucks that were housed in the building. The former ARFF station is currently occupied by a moving company and other airport support facilities. The location of the current and former ARFF stations are shown on **Figure 5-1**.

5.3 Historic Emergency Responses

Numerous incidents and plane crashes within the airport property have been historically documented by the FAA and ARFF team (**Appendix B**). The ARFF Chief was able to provide additional information on several crashes that occurred over the last 28 years during his time working for the ARFF team. At the time of the PA site visit, the ARFF team was using 6% AFFF from Chemguard. Specifics regarding the brand, concentration, and volume of AFFF used during each incident were not recalled by the ARFF Chief. Details regarding these crashes are listed below:

• 1991 Eastern Air Line Tire Fire: after landing and taxiing to the terminal, a tire on an Eastern Air Line flight caught fire and was extinguished by the ARFF team using AFFF. This emergency response was approximately 500 feet northeast of Blair Hangar AAOF. This release area is cross-gradient of the AAOF.

- 1994 Queen Air Crash: AFFF was used to extinguish a fire on the runway after a Queen Air crash. This emergency response was approximately 2,000 feet northeast of Blair Hangar AAOF. This release area is cross-gradient of the AAOF.
- 1995 Civil Air Patrol Crash: shortly after take-off a Civil Air Patrol flight crashed approximately 1,200 feet northeast of the airport runway, outside the property boundary of the airport (approximately 5,000 feet northeast of Blair Hangar AAOF). The ARFF team responded to the incident and used AFFF to suppress the fire. This release area is cross-gradient of the AAOF.
- 2016 Private Plane Crash: AFFF was used to extinguish a fire from a private plane crash located approximately 300 feet north of the western end of the airport runway. This emergency response was approximately 1,800 feet northwest of Blair Hangar AAOF. This release area is cross-gradient of the AAOF.
- 2017 Private Plane Crash: AFFF was used to extinguish a fire from a private plane crash located approximately 500 feet south of the western end of the airport runway. This particular emergency response was 6,000 feet west of Blair Hangar AAOF. This release area is cross-gradient of the AAOF.

5.4 Historic Fuel Spills

The ARFF team has responded to multiple fuel spills that have occurred adjacent to the airport terminal (approximately 0.5 miles to the east). According to information obtained during interviews with the ARFF Chief, AFFF was used as a vapor suppressant to prevent the ignition of fuel spills that occurred in 1996, 2001, and 2003. No spill records were available during the PA, and interviewees did not recall the amount of fuel spilled or the amount of AFFF applied. No information regarding how the fuel and AFFF was cleaned up was available during the PA.

6. **Preliminary Conceptual Site Model**

Based on the PA findings, one AOI was identified at the Blair Hangar AAOF: AOI 1 Tri-Max[™] Training Area and AFFF Storage Area. The AOI location is shown on **Figure 6-1**. The following sections describe the CSM components and the specific preliminary CSM developed for the AOI. The CSM identifies the three components necessary for a potentially complete exposure pathway: (1) source, (2) pathway, (3) receptor. If any of these elements are missing, the pathway is considered incomplete.

In general, the potential PFAS exposure pathways are ingestion and inhalation. Human exposure via the dermal contact pathway may occur, and current risk practice suggests it is an insignificant pathway compared to ingestion; however, exposure data for dermal pathways are sparse and continue to be the subject of PFAS toxicological study. Receptors at the facility include site workers, construction workers, and trespassers. The preliminary CSM for the Blair Hangar AAOF indicates which specific receptors could potentially be exposed to PFAS.

6.1 AOI 1 Tri-Max[™] Training Area and AFFF Storage Area

AOI 1 is the Tri-Max[™] Training Area and AFFF Storage Area. Training exercises using Tri-Max[™] 30 portable fire extinguishers were performed on the north side of the hangar on an annual basis from the early-2000s to 2016. Training consisted of spraying AFFF against the outside (and occasionally inside) of the northwest hangar bay door; the reported volume of AFFF released during the training exercises ranged from 1-2 gallons to the entire 30-gallon tank. After completion of the training, the expended AFFF was sprayed with water into the drain system surrounding the apron on the north side of the hangar. The drain was described as a French drain that would allow runoff to easily evaporate or infiltrate into the subsurface. Site personnel noted during the site visit that the French drains extended into the grassy areas that surround the hanger apron. A catch basin was added to the drain system between 2013-2016 to facilitate infiltration and evaporation after storm events.

Also incorporated in AOI 1 is the AFFF Storage Area. AFFF was stored in the chemical storage sheds in the northwest corner of the facility. According to VIARNG personnel, two 5-gallon buckets of AFFF were typically stored in the chemical storage sheds at any given time. The timeframe of use and storage of AFFF at the facility was unknown at the time of the PA. Additionally, the manufacturer and type of AFFF were not known, and previous SDSs were lost during Hurricane Maria.

The immediate release area within AOI 1 is covered by concrete and asphalt; however, numerous cracks in the tarmac and apron surrounding the hangar were observed during the site walk. Because it is not known if these cracks were present at the time of release, PFAS may have infiltrated to subsurface soil beneath the pavement. Construction workers may potentially be exposed to PFAS via ingestion of subsurface soil during excavation activities.

Because expended AFFF was rinsed into the drain system that surrounds the northern end of the apron, PFAS may have been washed onto the grassy areas surrounding the apron. Additionally, PFAS may have been released directly to subsurface soil via infiltration through the French drains. Ground-disturbing activities within AOI 1 could result in site worker, construction worker, and trespasser exposure to potential PFAS contamination in surface soil via inhalation and ingestion. Trespassers may access the facility via holes observed in the perimeter fence (Section 1.5.5) and be exposed to site media. Deeper ground-disturbing activities that expose subsurface soil could result in construction worker exposure via ingestion of subsurface soil.

PFAS are water soluble and can readily migrate from soil to surface water and shallow groundwater. Pathways to surface water and sediment are incomplete for all receptors because

there are no surface water features within the facility boundary. The closest body of water is the Caribbean Sea, approximately 0.4 miles to the south. Precipitation and stormwater flow within AOI 1 are conveyed to the grassy areas and French drain surrounding the apron and eventually infiltrates to shallow groundwater. Nearby groundwater wells are located either upgradient or side gradient of the facility. PFAS may have migrated from soil to shallow groundwater and may potentially have infiltrated the cisterns. As a result, the exposure pathway for ingestion of PFAS in groundwater is considered potentially complete for site workers and construction workers.

No surface water or sediment were identified at the facility; therefore, the pathway is incomplete for all potential receptors. The preliminary CSM for AOI 1 is shown on **Figure 6-2**.

7. Conclusions

This report presents a summary of available information gathered during the PA on the use and storage of AFFF and other PFAS related activities at Blair Hangar AAOF. The PA findings are based on the information presented in **Appendix A** and **Appendix B**.

7.1 Findings

One AOI related to a potential PFAS release was identified (**Table 7-1**) at Blair Hangar AAOF during the PA (**Figure 7-1**).

Table 7-1: AOI at Blair Hangar AAOF

Area of Interest	Name	Used by	Potential Release Dates
AOI 1	Tri-Max™ Training Area and AFFF Storage Area	VIARNG	Early-2000s - 2016

Based on potential PFAS release at this AOI, there is potential for exposure to PFAS contamination in media at or near the facility. The preliminary CSM for Blair Hangar AAOF, which presents the potential receptors and media impacted, is shown in **Figure 6-2**.

Several potential off-facility sources of PFAS were identified at Henry E. Rohlsen International Airport through interviews with ARFF personnel. These potential adjacent sources (**Section 5**) are located both up-gradient and side-gradient of the facility.

7.2 Uncertainties

A number of information sources were investigated during this PA to determine the potential for PFAS-containing materials to have been present, used, or released at the facility. Historically, documentation of PFAS use was not required because PFAS were considered benign. Therefore, records were not typically kept by the facility or available during the PA on the use of AFFF or other PFAS-containing material at Blair Hangar AAOF.

The conclusions of this PA are based on all available information, including: previous environmental reports, EDRs[™], observations made during the VSI, and interviews. Interviews of personnel with direct knowledge of a facility generally provided the most useful insights regarding a facility's historical and current PFAS-containing materials. Sometimes the provided information was vague or conflicted with other sources. Gathered information has a degree of uncertainty due to the absence of written documentation, the limited number of personnel with direct knowledge due to staffing changes, the time passed since PFAS were first used (1969 to present), and a reliance on personal recollection. Inaccuracies may arise in potential PFAS release locations, dates of release, volume of releases, and the concentration of AFFF used. There is also a possibility the PA has missed a source of PFAS, as the science of how PFAS may enter the environment continually evolves.

In order to minimize the level of uncertainty, readily available data regarding the use and storage of PFAS were reviewed, retired and current personnel were interviewed, multiple persons were interviewed for the same potential source area, and potential source areas were visually inspected. **Table 7-2** summarizes the uncertainties associated with the PA.

Table 7-2: Uncertainties

Area of Interest	Source of Uncertainty
General	No facility-specific documentation (real estate agreements, environmental reports, as-built drawings, etc.) was found during the PA to support development of the preliminary CSM. The full history (exact years of operation, history, and use) of Blair Hangar AAOF is unknown.
AOI 1	Much of the on-facility documentation (SDS, material inventory, manifests, etc.) were lost during Hurricane Maria. As a result, limited information on the history of AFFF use, procurement, maintenance, and frequency of Tri-Max™ training was not found during the PA.
AOI 1	During interviews with VIARNG personnel, there were conflicting reports regarding the volume of AFFF released during the Tri-Max™ training. Personnel recollection ranged from 1 to 30 gallons (full expenditure) per event.
AOI 1	No specific groundwater elevation data was found during the PA and it is unknown how deep the cisterns are set. Without more specific information, it is unclear if the cisterns are in communication with groundwater.
General	No as-builts or construction drawings of the French drain system installed on the north side of the hangar were found. Additionally, it was unclear whether the floor drains inside the hangar were connected to the municipal storm drain system located under the main road south of the hangar.

7.3 Potential Future Actions

Interviews and records indicate that former activities may have resulted in potential PFAS releases at one AOI identified during the PA. Based on the preliminary CSM developed for the Tri-Max[™] Training Area, there is potential for receptors to be exposed to PFAS contamination in soil and groundwater. **Table 7-3** summarizes the rationale used to determine if this AOI should be considered for further investigation under the CERCLA process and undergo an SI.

The ARNG will evaluate the need for an SI at Blair Hangar AAOF based on the potential receptors, the potential migration of PFAS contamination off the facility, and the availability of resources.

Area of Interest	AOI Location	Rationale	Potential Future Action
AOI 1: Trimax Training Area and AFFF Storage Area	17°41'55.95" N; 64°47'56.07" W	AFFF release during annual Tri-Max [™] training activities. AFFF may have been spilled or released from historical maintenance/ storage of AFFF at the chemical storage sheds.	Proceed to an SI, focus on soil and groundwater.

<u>Tips:</u>

The following information is intended to assist you in the use of the USGS Aerials. Because the performance and use of different systems can vary greatly, questions on the use of each computer, and program used should be referred to the manufacturer of the computer and program.

Opening and working with large .tiff files:

- Click on file to open once only (please be patient).
- Close other programs to make memory available.
- Only open one photo at a time, close photo before attempting to open another.
- USGS Aerials are provided in .tiff format on a DVD and may require a special program to open or edit.
- o You must have a DVD-ROM drive on your computer to open the images.
- If you have Windows XP/98se, the **Microsoft Paint Program** will allow you to view and edit the images. Other programs are available from Adobe and on the Internet.
- The files provided on the USGS DVD are very large (up to 400 megabytes) and can take up to 15 minutes, or longer, to open on your computer depending on your hardware and software.
- For faster opening, copy the files into your local hard drive prior to opening the files.
- USGS Aerials do not have a north indicator; please verify natural land marks such as lakes and rivers for proper alignment.
- o Be sure your computer meets the minimum system requirements.
- Minimum System Requirements:
 - Microsoft Windows 98/2000/XP Mac OS 9+ LINUX
 - Pentium-300mhz + or equivalent
 - o 64 MB RAM
 - HDD free space: 300 Mb for each photo 100 Mb of system disk space for a swap-file
 DVD-ROM Drive
 - DVD-ROM Drive
 .tiff editing/viewing program

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

The FINDS: database may contain additional details for this site. Please contact your EDR Account Executive for more information

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

Environmental Inf	AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.	
	NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.	
	US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.	
	US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits

VIRGIN ISLANDS RUM LIMITED (Continued)

issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

TRANSIENT NON-COMMUNITY WATER SYSTEM

AIR MINOR

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data v a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integra that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance Assistance, and Compliance Monitoring

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Rohlsen Airport, St. Croix, one of the United States Virgin Islands, lies about 65 miles southeast of Puerto Rico. Benedict Field was located on the southeasterly shore, about six miles from Frederiksted and nine miles from Christiansted. Approximate position is 170 46? North, 640 44? West. The property consists of 2,633.42 acres according to the INPR. However, the 2006 PA could not verify the transfer or location of 52 of the 2,633.42 acres as reported in the INPR. USA began use in 1940 with the acquisition of 2,633 acres. The AAF built the runways and numerous facilities betw. 1940-47. The site was declared excess in 1947. Most of the site was transferred by the Federal Farm Mortgage Corp to the Mun of St Croix in 1948 for use as an airport. By Exec. Order #8511, dated Aug 9, 1940, Tract 2, 213.72 acres was transferred from the DOI, to the War Dept. (WD). By condemnation, secured from Miles Merwin, on Sept 21, 1940, a tract of land consisting of 567.6 acres (Tract No. 3) and an additional 575.1 acres (Tract No. 1) was acquired from Niels Christoffersen. Tract No. 1 was acquired for the Night Bombing Range. This made a grand total of 1,356.42 acres for Ben. Fld. proper incl. the Night Bombing Range. Later in Sept 1942, tracts 5 & 6 were purchased for an additional 797.92 acres. Finally in Sept 1943, Tract No. 4 was use permitted to the WD from the DOI. The use permit for 427.084 from the DOI was granted subject to the condition that the Virgin Islands Company could

continue to use the cattle pens, dipping vats, and other facilities located on the subject premises. It was on this permitted acreage and Tract 5 that the Ordnance Area (ammo storage) was built. Tract no. 1, 5, and 6 were transferred to the Bureau of Land Management, DOI as the disposal agency who accepted custody and accountability temporarily in 1947. The Farm Credit Admin (FCA), Federal Farm Mortgage Corp, San Juan, PR accepted the transfer of Tracts 2 and 3 with improvements on 31 Dec.1947. In Mar 1948, the DOI tracts were reassigned to the FC. In

EDR ID Number EPA ID Number

NO SITES FOUND

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 07/19/2019 Date Data Arrived at EDR: 07/30/2019 Date Made Active in Reports: 09/03/2019 Number of Days to Update: 35 Source: EPA Telephone: N/A Last EDR Contact: 11/07/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Quarterly

NPL Site Boundaries

EPA Region 8 Telephone: 303-312-6774

EPA Region 9 Telephone: 415-947-4246

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 07/19/2019 Date Data Arrived at EDR: 07/30/2019 Date Made Active in Reports: 09/03/2019 Number of Days to Update: 35 Source: EPA Telephone: N/A Last EDR Contact: 11/07/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994 Number of Days to Update: 56 Source: EPA Telephone: 202-564-4267 Last EDR Contact: 08/15/2011 Next Scheduled EDR Contact: 11/28/2011 Data Release Frequency: No Update Planned

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 07/19/2019 Date Data Arrived at EDR: 07/30/2019 Date Made Active in Reports: 09/03/2019 Number of Days to Update: 35 Source: EPA Telephone: N/A Last EDR Contact: 11/07/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Quarterly

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019 Date Data Arrived at EDR: 04/05/2019 Date Made Active in Reports: 05/14/2019 Number of Days to Update: 39 Source: Environmental Protection Agency Telephone: 703-603-8704 Last EDR Contact: 10/04/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/19/2019 Date Data Arrived at EDR: 07/30/2019 Date Made Active in Reports: 09/03/2019 Number of Days to Update: 35 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 11/07/2019 Next Scheduled EDR Contact: 01/27/2020 Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 07/19/2019 Date Data Arrived at EDR: 07/30/2019 Date Made Active in Reports: 09/03/2019 Number of Days to Update: 35 Source: EPA Telephone: 800-424-9346 Last EDR Contact: 11/07/2019 Next Scheduled EDR Contact: 01/27/2020 Data Release Frequency: Quarterly

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 06/24/2019	Source: EPA
Date Data Arrived at EDR: 06/26/2019	Telephone: 800-424-9346

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/24/2019 Date Data Arrived at EDR: 06/26/2019 Date Made Active in Reports: 10/17/2019 Number of Days to Update: 113 Source: Environmental Protection Agency Telephone: (212) 637-3660 Last EDR Contact: 10/28/2019 Next Scheduled EDR Contact: 01/06/2020 Data Release Frequency: Quarterly

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 06/24/2019 Date Data Arrived at EDR: 06/26/2019 Date Made Active in Reports: 10/17/2019 Number of Days to Update: 113 Source: Environmental Protection Agency Telephone: (212) 637-3660 Last EDR Contact: 10/28/2019 Next Scheduled EDR Contact: 01/06/2020 Data Release Frequency: Quarterly

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 06/24/2019 Date Data Arrived at EDR: 06/26/2019 Date Made Active in Reports: 10/17/2019 Number of Days to Update: 113 Source: Environmental Protection Agency Telephone: (212) 637-3660 Last EDR Contact: 10/28/2019 Next Scheduled EDR Contact: 01/06/2020 Data Release Frequency: Quarterly

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators) RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 06/11/2019Source: Drug Enforcement AdministrationDate Data Arrived at EDR: 06/13/2019Telephone: 202-307-1000Date Made Active in Reports: 09/03/2019Last EDR Contact: 08/21/2019Number of Days to Update: 82Next Scheduled EDR Contact: 12/09/2019Data Release Frequency: No Update Planned

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013 Date Data Arrived at EDR: 03/21/2014 Date Made Active in Reports: 06/17/2014 Number of Days to Update: 88

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

Date of Government Version: 09/30/2017 Date Data Arrived at EDR: 05/08/2018 Date Made Active in Reports: 07/20/2018 Number of Days to Update: 73

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 04/25/2019 Date Data Arrived at EDR: 05/02/2019 Date Made Active in Reports: 05/23/2019 Number of Days to Update: 21 Source: Environmental Protection Agency Telephone: 202-564-8600 Last EDR Contact: 10/21/2019 Next Scheduled EDR Contact: 02/03/2020 Data Release Frequency: Varies

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995 Date Data Arrived at EDR: 07/03/1995 Date Made Active in Reports: 08/07/1995 Number of Days to Update: 35 Source: EPA Telephone: 202-564-4104 Last EDR Contact: 06/02/2008 Next Scheduled EDR Contact: 09/01/2008 Data Release Frequency: No Update Planned

RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 07/01/2019 Date Data Arrived at EDR: 07/01/2019 Date Made Active in Reports: 09/23/2019 Number of Days to Update: 84 Source: Environmental Protection Agency Telephone: 202-343-9775 Last EDR Contact: 11/01/2019 Next Scheduled EDR Contact: 01/13/2020 Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006 Date Data Arrived at EDR: 03/01/2007 Date Made Active in Reports: 04/10/2007 Number of Days to Update: 40

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 06/23/2017 Date Data Arrived at EDR: 10/11/2017 Date Made Active in Reports: 11/03/2017 Number of Days to Update: 23 Source: Department of Energy Telephone: 505-845-0011 Last EDR Contact: 08/21/2019 Next Scheduled EDR Contact: 12/02/2019 Data Release Frequency: Varies

A list of several hundred sites in the U.S. where secondary lead smelting was done from 1931and 1964. These sites may pose a threat to public health through ingestion or inhalation of contaminated soil or dust

Date of Government Version: 04/05/2001 Date Data Arrived at EDR: 10/27/2010 Date Made Active in Reports: 12/02/2010 Number of Days to Update: 36 Source: American Journal of Public Health Telephone: 703-305-6451 Last EDR Contact: 12/02/2009 Next Scheduled EDR Contact: N/A Data Release Frequency: No Update Planned

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals. Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services,

a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes Source: National Institutes of Health Telephone: 301-594-6248 Information on Medicare and Medicaid certified nursing homes in the United States. Public Schools Source: National Center for Education Statistics Telephone: 202-502-7300 The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states. Private Schools Source: National Center for Education Statistics' primary database on private school locations in the United States.

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by AECOM were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

PA Interview Questionnaire – Fire Station Facility: A Interviewer: Date/Time: 10/17/19 Interviewee: Can your name/role be used in the PA Report? Y or N Title: Fire chief Can you recommend anyone we can interview? Phone Number: Y or N Email: 1. Roles or activities with the Facility/years working at the Facility. 28 total years 10 years as chief 2. What can you tell us about the history of AFFF at the Facility? Was it used for any of the following activities, circle all that apply and indicate years of active use, if known? Identify these locations on a olways on trucks por 1744 requirements facility map. Maintenance (e.g., ramp washing) Fire Training Areas 6% Firefighting (Active Fire) del building 1967, in new building for 1 yr Crash Fire Suppression Systems (Hangers/Dining Facilities) Fire Protection at Fueling Stations Non-Technical/Recreational/ Pest Management 3. Are any current buildings constructed with AFFF dispensing systems or fire suppression systems? What are the AFFF/suppression system test requirements? What is the frequency of testing at the AFFF/suppression systems? Kr Are fire suppression systems currently charged with AFFF or have they been retrofitted for use of 4. high expansion foam? NO 5. How is AFFF procured? Do you have an inventory/procurement system that tracks use?

PA Interview Questionnaire – Fire Station

Facility:	
Interviewer:	
Date/Time:	

What type of AFFF has been/is being used (3%, 6%, Mil Spec Mil-F-24385, High Expansion)? 6. Manufacturer (3M, Dupont, Ansul, National Foam, Angus, Chemguard, Buckeye, Fire Service Plus)? 6%, Chemquard or National Foom, Aerowater 7. Is AFFF formulated on base? If so, where is the solution mixed, contained, transferred, etc.? 8. Where is the AFFF stored? How is it stored (tanks, 55-gallon drums, 5-gallon buckets)? What size are the storage tanks? Is the AFFF stored as a mixed solution (3% or 6%) or concentrated material? each truck holds and gallons keep twice what is stoned woodsallons 9. How is the AFFF transferred to emergency response vehicles, suppression systems, flightline extinguishers? Is/was there a specified area on the facility where vehicles are filled with AFFF and does this area have secondary containment in case of spills? How and where are vehicles storing AFFF cleaned/decontaminated? pumped, air operated 5 sallon dumps 10. Provide a list of vehicles that carried AFFF, now and in the past, and where are/were they located? 11. Any vehicles have a history of leaking AFFF? Do you/did you test the vehicles spray patterns to make sure equipment is working properly? How often are/were these spray tests performed and can water leaking into Fram Inches, not the other way around 2016 - inspection to make sure MARE wasn't crystalize you provide the locations of these tests, now and in the past?

PA Interview Questionnaire – Fire Station

Facility:	
Interviewer:	
Date/Time:	

12. How many FTAs are/were on this facility and where are they? Locate on a map. How many FTAs How many FTAS are/were on this facility and where are they. Locate on a map. now many FTAS are active and inactive? For inactive FTAs, when was the last time that fire training using AFFF was conducted at them? MUHPLEX Proof to 2000's, training training at multiple Bince 2000's training annual Direct 2000's training Dir annual 13. What types of fuels/flammables were used at the FTAs? algas diesel secondary contain nent 14. What was the frequency of AFFF use at each location? When a release of AFFF occurs during a fire training exercise, now and in the past, how is/was the AFFF cleaned and disposed of? Were retention ponds built to store discharged AFFF? Was the AFFF trickled to the sanitary sewer or left in the pond to infiltrate? spe, above, 15. Are there mutual aid/use agreements between county, city, local fire department? Please list, even if informal. If formalized, may we have a copy of the agreement? Can you recall specific times when city, county, state personnel came on-post for training? If so, please state which state/county agency, military entity? Do you have any records, including photographs to share with us? doesn't remember ANG training of any coordinating for training w/ MNG train w/ local munciple fire department 16. Did individual units come on-post with their own safety personnel, did they also bring their own AFFF? Was training with AFFF part of these exercises? How were emergencies handled under these circumstances? NO

÷

Facility: Interviewer: Date/Time:

17. Did military routinely or occasionally fire train off-post? List units that you can recall used/trained at various areas. 6/A 18. Are there specific emergency response incident reports (i.e., aircraft or vehicle crash sites and fires)? If 18. Are there specific emergency response incident reports (i.e., aircraft or venicle crash sites and fires)? If so, may we please copy these reports? Who (entity) was the responder?
1975 plane orashed in front of Station (old station) no foam
1991 Fastern twe five - foam used to the fatrol
2016 private plane
19. Do you have records of fuel spill logs? Was it common practice to wash away fuel spills with AFFF? Is/was AFFF used as a precaution in response to fuel releases or emergency runway landings to prevent fires? see map, multiple fuel releases and applicable for vapor suppression 20. Was AFFF used for forest fires or fire management on-post/off-post? If so, please describe what happened and who was involved? None 21. Can you provide any other locations where AFFF has been stored, released, or used (i.e. hangars, buildings, fire stations, firefighting equipment testing and maintenance areas, emergency response sites, storm water/surface water, waste water treatment plants, and AFFF ponds)? FMZUO at comm section of terminal Cos removes Oa special/bygens for latth 0a

Interviewer:	
Date/Time:	

Date/Time:
22. Are you aware of any other creative uses of AFFF? If so, how was AFFF used? What entities were involved?
23. How is off-spec AFFF disposed (used for training, turned in, or given to a local Fire Station)? If applicable, do you know the name of the vendor that removes off-spec AFFF? Do you have copies of the manifest or B/L? NA - Never Used to dispose MALL, only for training or emergency
24. Do you recommend anyone else we can interview? If so, do you have contact information for them?

Appendix B.2 Visual Site Inspection Checklists

Visual Survey Inspection Log
Recorded by:
Source/Release Information
Source/Release Information Date: 10/17/19 Site Name / Unique ID: Bair Hangar AAOF
Site / Area Acreage:
Historic Site Use (Brief Description):
Current Site Use (Brief Description):
1. Was AFFF used (or spilled) at the site/area?
ia If yes, document how AFFF was used and usage time (e.g., fire fighting training 2001 to 2014)
2. Has usage been documented? 2a. If yes, keep a record (place electronic files on a disk)
3. What types of businesses are located near the site? Industrial Commercial Plating / Waterproofing / Residential
3a Indicate what businesses are located near the site
airport support, car rental, terminal
4. Is this site located at an airport/flightline? 4a. If yes, provide a description of the airport/flightline tenants
Other Significant Site Features: 1. Does the facility have a fire suppression system?
ta. If yes, indicate which type of AFFF has been used
1b. If yes, describe maintenance schedule/leaks
Ic. If yes, how often is the AFFF replaced
Id. If yes, does the facility have floor drains and where do they lead? Can we obtain an as built drawing?
Transport / Pathway Information Migration Potential:
Does site/area drainage flow off installation?
In It'so, note observation and location storm drains/ French drain system to OWS - locking for drawings
2 Is there channelized flow within the site/area?
2a If so, please note observation and location
3 Are monitoring or drinking water wells located near the site? Y/N
3a If so, please note the location On Known
4 Are surface water intakes located near the site?
4a. If so, please note the location
Significant Topographical Features:
1 Has the infrastructure changed at the site/area?
1a. If so, please describe change (ex. Structures no longer exist)
2. Is the site/area vegetated? Y(N)
2. Is the site/area vegetated? <u>VN</u> 2a. If not vegetated, briefly describe the site/area composition Mainly concrete and acphalt,
sile is not used
3. Does the site or area exhibit evidence of erosion?
3a. If yes, describe the location and extent of the erosion
4. Does the site/area exhibit any areas of ponding or standing water?
4. Does the site/area exhibit any areas of ponding or standing water?

្

e.

4a. If yes, describe the location and extent of the ponding.
Receptor Information 1. Is access to the site restricted? 1a. If so, please note to what extent:
2. Who can access the site? Site Workers Construction Workers Despassers / Residential / Recreational Users / Ecological
3. Are residential areas located near the site? <u>3a. If so. please note the location/distance</u>
4. Are any schools/day care centers located near the site? Y / N 4a. If so, please note the location/distance/type:
5 Are any wetlands located near the site? 5a. If so, please note the location/distance/type
Additional Notes

Photo ID/Name	Date & Location	Photograph Description
AO1001	1/1/2018	Building 500. on flightline. looking south. NE Corner Fire Suppression System

Appendix B.3 Conceptual Site Model Information

Preliminary Assessment – Conceptual Site Model Information

Blair Nangar AAOF Site Name: _____ Why has this location been identified as a site? of or release ATT Dan Mina, Are there any other activities nearby that could also impact this location? **Training Events** Have any training events with AFFF occurred at this site? from lake 205-20000 If so, how often? of leach a Devilla annually 1.5-5 gallons How much material was used? Is it documented? Per training elent Identify Potential Pathways: Do we have enough information to fully understand over land surface water flow, groundwater flow, and geological formations on and around the facility? Any direct pathways to larger water bodies? **Surface Water:** Surface water flow direction? Unknown Average rainfall?

ditchas

IOW

NÒ

r/c)

Any flooding during rainy season?

Direct or indirect pathway to ditches?

Does surface water pond any place on site?

Any impoundment areas or retention ponds?

drainage

or in

Any NPDES location points near the site?

Direct or indirect pathway to larger bodies of water?

How does surface water drain on and around the flight line?

Preliminary Assessment – Conceptual Site Model Information

Groundwater:

Groundwater flow direction? UnKnot
Depth to groundwater? UNKnown
Uses (agricultural, drinking water, irrigation)? UNKNOWN
Any groundwater treatment systems?
Any groundwater monitoring well locations near the site? Unknown
Is groundwater used for drinking water?
Are there drinking water supply wells on installation? No
Do they serve off-post populations? NO
Are there off-post drinking water wells downgradient
Waste Water Treatment Plant:
Has the installation ever had a WWTP, past or present? NO
If so, do we understand the process and which water is/was treated at the plant? See above
Do we understand the fate of sludge waste? NA
Is surface water from potential contaminated sites treated? NA

Equipment Rinse Water

1. Is firefighting equipment washed? Where does the rinse water go? Inc. Gù 0 MRG the A nelle Ko apm AN Facility) - likely clark into retention der dois lowance 2. Are nozzles tested? How often are nozzles tested? Where are nozzles tested? Are nozzles cleaned after

use? Where does the rinse water flow after cleaning nozzles?

Manown

3. Other?

Preliminary Assessment – Conceptual Site Model Information

Identify Potential Receptors:

Site Worker	Ves	
Construction Worker	Yes	
Recreational User	No	
Residential	No	
Child	No	
Ecological	Yes	

Note what is located near by the site (e.g. daycare, schools, hospitals, churches, agricultural, livestock)?

Documentation

Ask for Engineering drawings (if applicable).

Has there been a reconstruction or changes to the drainage system? When did that occur?
