

OKLAHOMA ARMY NATIONAL GUARD (OKARNG) DRINKING WATER PFAS SNAPSHOT

The Army National Guard is committed to ensuring quality drinking water is provided to its Soldiers, and civilians. Proactive sampling is performed by the Army National Guard on its drinking water systems, as well as, coordination with other purveyors to ensure perfluorooctane sulfonate (PFOS) and perfluorooctanoic acid (PFOA) remains below the Environmental Protection Agency (EPA) lifetime health advisory (HA) level of 70 parts per trillion (ppt). The EPA HA is not an enforceable or a regulatory standard, and represents a concentration in drinking water that is not expected to produce adverse health effects if the water is consumed over a lifetime.

Drinking Water Status: Finished drinking water, which is the treated water people drink at Midwest City Readiness Center (MWCRC), does not contain PFOS/PFOA above the EPA HA. Additionally, Army National Guard-provided drinking water complies with the standards of the Safe Drinking Water Act (SDWA), a federal law designed to protect the quality of drinking water supplied to the American public.

Test Date: April 2017

PFOA + PFOS Results: 4.42 ppt (J)ⁱ

Future Testing Event: None

History: The well has been disconnected and not used for potable water since March 2001.

Type of Drinking Water System: Army National Guard-owned

For Questions Contact: Oklahoma National Guard State Public Affairs Office

Office Phone Number: 405-228-5037

Office E-mail Address: ng.ok.okarng.list.staff-pao@mail.mil

Water Quality Reports: A water quality report is not required for this location

ⁱ The reported result is an estimate. Values noted with a 'J' flag were detected by the laboratory but the true concentration is uncertain.
