EXECUTIVE SUMMARY INDUSTRIAL HYGIENE STUDY NO. 55-NH-7069-01 INDOOR FIRING RANGE EVALUATION FIFTH REGIMENT ARMORY MARYLAND ARMY NATIONAL GUARD BALTIMORE, MARYLAND 23 APRIL - 16 MAY 2001

- 1. PURPOSE. To assess the occupational health risks associated with the subject ranges and the range ventilation system effectiveness of the Fifth Regiment Armory indoor firing ranges.
- 2. CONCLUSIONS. This firing range is UNSAFE for use in its current condition. The firing range does not have sufficient ventilation to provide the minimum cross-sectional air velocities at the firing line. The design of the range produces turbulent airflow that can result in unacceptable exposures to lead. The ceiling of the range does not provide ballistic security, is not airtight and may not provide sufficient sound insulation. These shortcomings potentially endanger the occupants of the administrative space above.

RECOMMENDATIONS.

- Increase the volume of supply air provided to the range in order to produce a crosssectional air velocity of 50 to 75 feet per minute at the firing line.
- b. Replace the cinderblock and mortar plenum wall with perforated wallboard on a suitable framing system with a 6-10% free open area to evenly distribute air across the firing line.
- c. Electrically interlock the lights and ventilation system in order to insure proper ventilation during all range operations.
- d. Install additional baffling to prevent ricocheted bullets from penetrating the wooden ceiling. Seal the ceiling to prevent introduction of air in front of the firing line.
- e. Evaluate the impulse noise in the office space above in order to determine what engineering or administrative controls are necessary to prevent occupational noise exposure.
 - f. Refinish the floors so that they provide a level, smooth, dense, airtight surface.
- g. Implement the engineering and administrative controls outlined in paragraph six of this report.

INDOOR FIRING RANGE EVALUATION
FIFTH REGIMENT ARMORY
MARYLAND ARMY NATIONAL GUARD
BALTIMORE, MARYLAND
23 APRIL - 16 MAY 2001

- 1. REFERENCES. See Appendix A.
- 2. AUTHORITY. U.S. Army Center for Health Promotion and Preventive Medicine (USACHPPM) Form 250-R, National Guard Bureau (NGB), 7 April 1998.
- 3. PURPOSE. To assess the occupational health risks associated with the subject ranges and the range ventilation system effectiveness of the Fifth Regiment Armory indoor firing ranges.
- 4. GENERAL.
 - a. Personnel Contacted. See Appendix B.
- b. <u>Survey Personnel</u>. CPT Non-Responsive Environmental Science Officer, and Mr. Non-Responsive Environmental Health Technician, from the Industrial Hygiene Division, this Activity, conducted this survey.
 - Background.
- (1) This survey was conducted at the request of Ms Non-Responsive Regional Industrial Hygienist, NGB, Havre de Grace, Maryland.
- (2) Renovations to the ranges were completed in 2000. The Maryland Army National Guard (MDARNG) has not used the ranges since the renovations.
- 5. GENERAL PROCEDURES.
 - a. Assessment Criteria. Indoor firing range ventilation criteria are delineated in

Readiness thru Health

SUBJECT: Industrial Hygiene Study No. 55-NH-7069, 23 April - 16 May 2001

Memorandum, National Guard Bureau, Aviation and Safety, Subject: (All States Log Number P00-0059) Army National Guard (ARNG) - Policy and Responsibilities for Inspection, Evaluation, and Operation of ARNG Indoor Firing Ranges (IFR); Plate VS-99-04, page 10-176, of the Industrial Hygiene Ventilation Manual; and NGR 385-15 (references 1, 2, and 3, respectively).

b. <u>Calibration</u>. All ventilation instruments used in this study were calibrated against National Institute of Standards and Technology-traceable instruments in accordance with manufacturers' and USACHPPM procedures.

c. Methodology.

- (1) Ventilation. All ventilation measurements were obtained using a calibrated, precision, heated-wire, digital anemometer. Ventilation was evaluated as specified in references 2 and 3. Ventilation smoke canisters provided visual assessment of airflow patterns and ventilation exhaust effectiveness. Firing line measurements were taken at each firing point at levels representing the approximate heights of the firers' breathing zones (BZ) when firing from the standing, kneeling, and prone position.
- (2) Sampling. No wipe samples were collected because the range has not been used for firing since it was renovated; therefore, no surface contamination is expected. Since the range is designated UNSAFE for use in its current condition, no weapons firing took place; therefore, no air samples were collected.

6. FINDINGS AND DISCUSSION

a. <u>Description</u>. The firing ranges are located in the basement of the Fifth Regiment Armory along the southwest wall. The range located in the southern corner will hereafter be referred to as "Range 1". The range situated north of Range 1 will hereafter be referred to as "Range 2". The firing positions are numbered 1 through 5 in each range. The walls of the range are made of brick and mortar. The plenum walls are made of concrete masonry units with five openings per wall. Each opening is covered with a sheet of perforated metal. The openings are located directly behind each firing position. The plenum wall measures 19 feet, 2 inches wide, and 8 feet high. The exhaust ducts are located behind the backstops. Fans located on the roof of the armory provide the exhaust for each range. Fans located in a utility room between the two ranges supply the make-up air for each range. Make-up air is directed into the plenum, located behind the firing line, distributed through the perforated portions of the plenum wall, and subsequently moved downrange. The firing line is 23 feet wide and 8 feet high.

SUBJECT: Industrial Hygiene Study No. 55-NH-7069, 23 April – 16 May 2001

The downrange area is 27 feet wide, and 12 feet, four inches high, to the wooden ceiling.

b. Ventilation.

- (1) Finding. The volume of air provided by the fans is not sufficient to provide an air velocity of 50-75 feet per minute at the firing line, as required by references 1, 3, and 4. Indoor firing range ventilation should be designed to move the contaminants produced by discharged weapons away from the personnel firing the weapons. Inadequate ventilation may result in an overexposure to lead and other contaminants. The velocity of the air moving across the firing lines in Range 1 averaged 42.7 feet per minute (FPM) with average lane velocities ranging from 26.1 to 61.7 FPM (a lane is the designated width of one firing position, extended from the firing line to the bullet trap.) The velocity of the air moving across the firing lines in Range 2 averaged 32 FPM with average lane velocities ranging from 3.1 to 49.9 FPM. See Appendix C for tabulated air velocity measurements. Observation of air currents through smoke testing confirmed zones with little to no air movement and retrograde air movement at the firing line in lanes 1 and 5, Range 1; and lanes 2, 3, and 4, Range 2. Smoke testing also demonstrated turbulent air movement from the firing lines to the bullet backstop, as well as areas of stagnant air. This poor air movement may be caused by both the insufficient air velocity provided by the supply fans and by air leaking into the range through the ceilings as discussed in paragraph 6e, below. Even if a standard plenum wall is installed, the volume of air produced by the fans will only provide an average velocity at the firing lines of 37.2 FPM and 33.0 FPM in Ranges 1 and 2 respectively (see Appendix D for calculations).
- (2) Recommendation. Increase the volume of air moving across the firing line in the Ranges by adjusting the fans or replacing them with larger capacity units. The fans must produce between 9,200 and 13,800 cubic feet per minute (CFM) in order to produce the required 50-75 FPM across the 153 square foot cross section at the firing line.

c. Plenum.

(1) Finding. The design of the plenum walls increase turbulence across the firing lines. Airflow should be laminar, as required by NGR 385-15, reference 3. Turbulent and retrograde airflow increase the potential for exposure to lead and other contaminants from discharged weapons. Observation of air currents through smoke testing confirmed zones with little to no air movement at the firing line. The plenum walls have five openings located behind the firing lines. These openings

SUBJECT: Industrial Hygiene Study No. 55-NH-7069, 23 April - 16 May 2001

are covered with perforated metal with a 50% open area. There are metal louvers behind the metal grill used to control airflow. The ACGIH Vent Manual (reference 2) specifically recommends against grills and diffusers in the plenum wall. The CEHND 1110-1-18 (reference 4) requires that "the supply air plenum wall extends from floor to ceiling and covers the full width of the range. The plenum wall can be designed from various material (including perforated hardboard, perforated metal, etc.) on a suitable framing system."

(2) Recommendation. Replace the cinderblock plenum wall with perforated wallboard on a suitable framing system so that the wall has 6-10% free open area to evenly distribute air across the firing line.

d. Interlock.

- (1) Finding. The lights and ventilation are not electrically interlocked, as required by NGR 385-15 (reference 3) and CEHND 1110-1-18 (reference 4). Ranges should be designed to afford maximum protection against lead exposure by electrically interlocking the supply and exhaust ventilation system with the range lights. This interlock also ensures that the ventilation system is activated during firing and range cleanup.
- (2) Recommendation. Electrically interlock the lights and ventilation system in order to insure proper ventilation during all range operations.

e. Ceiling.

- (1) Finding. The ceiling of the range does not provide ballistic security, as required in CEHND 1110-1-18 (reference 4). The ceiling of the range is the wooden sub-floor for the office space above the range (see Figure 1, Appendix E). The range is equipped with ¼-inch mild sheet steel baffles along the ceiling; however, these baffles may not prevent ricocheted shots from striking and possibly penetrating the ceiling. Additionally, the wooden sub-floor may not provide adequate sound insulation for the occupants of the office space from the impulse noise below. Moreover, the ceiling may contribute to the turbulent airflow by introducing air into the range in front of the firing line.
- (2) Recommendations. Install additional baffles to prevent ricocheted bullets from penetrating the wooden ceiling. Seal the ceiling to prevent introduction of air in front of the firing line. Evaluate the impulse noise in the office space above the ranges in order to determine what engineering or administrative

SUBJECT: Industrial Hygiene Study No. 55-NH-7069, 23 April - 16 May 2001

controls are necessary to prevent occupational noise exposure to the office spaces' occupants.

f. Floor.

- (1) Finding. The range floors are not dense, smooth surfaces, as required by CEHND 1110-1-18 (reference 4). The floors in the ranges have metal covers over pipe-chases that are not even with the floors and thus present ricochet hazards (see Figure 2, Appendix E). Additionally, the pipe chases are not airtight and the negative pressure from the ranges draws air from the outside. These air currents interfere with the laminar flow of air from the firing lines to the bullet traps. This is especially noticeable at firing position five, Range 2, where a 4 x 4½-inch gap in the floor sends a strong current of air perpendicular to the desired airflow (see Figures 3 and 4, Appendix E). The floor also has uneven 1½-inch seams that present ricochet hazards (see Figure5, Appendix E). Additionally, the bottom of the bullet-stop is not even with the floor. This exposed metal surface also presents ricochet hazards (see Figure 6, Appendix E).
- (2) Recommendations. Seal off the pipe-chases and re-finish the floors so that they have dense smooth surfaces that are level with the bottoms of the bullet stops. If this is not feasible, re-fit the covers to the pipe-chases so that no gaps exist and fill the seams in the floors so that a smooth dense surface is provided. Fill the gaps at the bottoms of the bullet stops so that the angles of the bullet stops are continued to points level with the floors.

g. Walls.

- (1) Finding. The northeast walls of both ranges expand at an approximately 45-degree angle from the renovated walls at the firing lines to the original range walls. Smoke testing confirmed that this configuration currently creates retrograde air-currents immediately next to the firing lines. These eddies could potentially cause lead exposure hazards to persons occupying adjacent firing positions.
- (2) Recommendation. Extend the cinderblock walls the length of the ranges.

SUBJECT: Industrial Hygiene Study No. 55-NH-7069, 23 April - 16 May 2001

h. Exhaust (Range 2).

- (1) Finding. The exhaust system for Range 2 displayed a clogged filter warning light. Visual inspection of the filter did not reveal buildup on the filter, indicating a malfunctioning sensor.
- (2) Recommendation. Repair or replace the sensor associated with the clogged filter light.

i. Illuminated Warning Signs.

- (1) Finding. The ranges do not have illuminated warning signs, interlocked with the range ventilation switch and located outside of the firing range to alert individuals that the range is in use, as required by reference 1.
 - (2) Recommendation. Install illuminated warning signs as described above.
- 7. CONCLUSIONS. This firing range is UNSAFE for use in its current condition. The firing range does not have sufficient ventilation to provide the minimum cross-sectional air velocities at the firing line. The design of the range produces turbulent airflow that can result in unacceptable exposures to lead. The ceiling of the range does not provide ballistic security, is not airtight and may not provide sufficient sound insulation. These shortcomings potentially endanger the occupants of the administrative space above.
- 8. FURTHER EVALUATION. Once the engineering controls described in this report are in place, the range must undergo further evaluation. The ventilation must be reassessed in order to gage the effectiveness of the engineering controls. Additionally, administrative controls described in references 1, 3, and 4 must be implemented in order to ensure safe range operation. Once these controls are in place, personal and area monitoring must be performed in order to confirm the ranges' safe and healthful operation.
- 9. ADDITIONAL ASSISTANCE. Additional direct support in the fields of pest management, pesticide risk management, water supply management, wastewater management, hazardous waste management, ergonomic evaluation, worksite hazards management, sanitation and hygiene, and installation industrial hygiene

SUBJECT: Industrial Hygiene Study No. 55-NH-7069, 23 April - 16 May 2001

management is available, and may be requested from USACHPPM, DSA-North, at DSN 923-6502 or commercial (301) 677-6502.

[&]quot; CFM = Cubic Feet Per Minute.

[&]quot;' The calculated air velocity is the theoretical maximum evenly distributed air velocity across the firing line for the given volume of air produced by the supply fans.

SUBJECT: Industrial Hygiene Study No. 55-NH-7069, 23 April - 16 May 2001

APPENDIX D

CALCULATIONS

1. Average Air Velocity
$$(\overrightarrow{v} FPM) = \frac{X_1 + X_2 + X_3 + ... + X_n}{n}$$

X_n = Air Velocity Measurement (FPM)

n = Number of Measurements

2. Open Face Area (o ft²) = $\Pi \times \left(\frac{d}{2}\right)^2 \times n$

 $\Pi = 3.14159$

d = Diameter of Opening (ft.)

n = Number of Openings

3. Volumetric Air-Flow (q CFM) = $\vec{v} \times \vec{a}$

v = Average Air Velocity (CFM)

a = Open Face Area (ft²)

4. Cross-Sectional Area (s ft^2) = $w \times h$

w = Width (ft.)

h = Height (ft.)

5. Percent Open Face = $\frac{o}{s_n} \times 100$

o = Open Face Area (ft²)

s_e = Cross-Sectional Area of Plenum (ft²)

6. Calculated Air Velocity = $\frac{q}{s_t}$

Q = Volumetric Air-Flow (CFM)

 $s_f = Cross-Sectional Area of Firing Line (ft^2)$

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Non-Responsive 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: 5th Regiment Armory Indoor Firing Ranges

- 1. An email dated 26 July 2006 from the CFMO stated that the two 5th Regiment Armory Indoor Firing Ranges conversion/construction projects have been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Lead surface clearance samples were collected by an individual from Waste-Tron of Maryland, Inc. and analyzed by Caliber Analytical Service. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

Shirley,

Pursuant to the project specification, the above referenced project has been completed. The contractor:

ARC Construction Services, Inc.

2025 Inverness Avenue Baltimore, MD 21230

443-573-0292

Non-Responsive

has completed the project per the specifications and all tests have meet the current standards of under 200 microns. The room has been fully encapsulated to current standards. V/r

NATIONAL GUARD BUREAU ARMY NATIONAL GUARD REGION NORTH INDUSTRIAL HYGIENE OFFICE ATTN: NGB-ARS-IHNE 301-IH OLD BAY LANE HAVRE DE GRACE, MD 21078

NGB-ARS-IHNE

23 August 2006

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Annapolis Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the Annapolis Armory Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

Subject: Project completion- Annapolis Readiness Center, 18 Willow Street, Annapolis, MD 21401-3113

Shirley,

Pursuant to the project specification, the above referenced project has been completed. The contractor:

ARC Construction Services, Inc.

2025 Inverness Avenue Baltimore, MD 21230

443-573-0292

has completed the project per the specifications and all tests have meet the current standards of under 200 microns. The room has been fully encapsulated to current standards.

Non-Responsive

Dear Customer.

Reservoirs Environmental, Inc. is an analytical laboratory accredited for the analysis of Industrial Hygiene and Environmental matrices by the American Industrial Hygiene Association, Lab ID 101533 - Accreditation Certificate #480. The laboratory is currently proficient in both PAT & ELPAT programs respectively.

Reservoirs has analyzed the following sample(s) using Atomic Emission Spectroscopy - Inductively Coupled Plasma (AES-ICP) per your request. The analysis has been completed in general accordance with the appropriate methodology as stated in the analysis table. Results have been sent to your office.

RES 96062-1 Is the job number assigned to this study. This report is considered highly confidential and the sole property of the customer. Reservoirs Environmental, Inc. will not discuss any part of this study with personnel other than those authorized by the client. Samples will be disposed of after sixty days unless longer storage is requested. If you should have any questions about this report, please feel free to call me at 303-964-1986.

Sincerely,

President

NGB-ARS-IHNE

16 February 2007

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Catonsville Readiness Center Indoor Firing Range

- 1. An email dated 15 February 2007 from the CFMO stated that the Catonsville Readiness Center Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

| Duplicate Sample 2 | #Nood | nig/Kg | | #Urroz | #Proor |
| Matrix Spike Analysis | | | · | | • |
| Spiked Sample | | | 85.67% | | Acceptable |
| Spike Duplicate | | | | | Acceptable |
| Laboratory Control Sample 1 | 276.754 | μв | 91.82% | | Acceptable |
| Laboratory Control Sample 2 | 272.588 | μв | 92.73% | 0.99% | Acceptable |

Calibration Information

Correlation of Calibration Curve:

0.998086

Afficalibration verification samples are within acceptance limits.

Notes:

Recovery for the Report Limit Verification Sample was 79.3%, below the lower control limit of 80%. A passing Report Limit Verification sample for wipe samples for this analysis date can be found with SDG 14126 (114.0% recovery)

NATIONAL GUARD BUREAU ARMY NATIONAL GUARD REGION NORTH INDUSTRIAL HYGIENE OFFICE ATTN: NGB-ARS-IHNE 301-IH OLD BAY LANE HAVRE DE GRACE, MD 21078

NGB-ARS-IHNE

26 March 2007

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Cheltenham Readiness Center Indoor Firing Range

- 1. An email dated 23 March 2007 from the CFMO stated that the Cheltenham Readiness Center Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

NATIONAL GUARD BUREAU ARMY NATIONAL GUARD REGION NORTH INDUSTRIAL HYGIENE OFFICE ATTN: NGB-ARS-IHNE 301-IH OLD BAY LANE HAVRE DE GRACE, MD 21078

NGB-ARS-IHNE

23 August 2006

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Crisfield Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the two Crisfield Armory Indoor Firing Range conversion/construction projects have been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Lead surface clearance samples were collected by an individual from Waste-Tron of Maryland, Inc. and analyzed by Caliber Analytical Service. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

NATIONAL GUARD BUREAU ARMY NATIONAL GUARD REGION NORTH INDUSTRIAL HYGIENE OFFICE ATTN: NGB-ARS-IHNE 301-IH OLD BAY LANE HAVRE DE GRACE, MD 21078

NGB-ARS-IHNE

23 January 2007

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Cumberland Readiness Center Indoor Firing Range

- 1. An email dated 17 January 2007 from the CFMO stated that the Cumberland Readiness Center Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive t (410) 942-0273 x23.

Army National Guard IH - West 3401 Quebec Street, Suite 7200 Denver CO 80207

Dear Customer,

Reservoirs Environmental, Inc. is an analytical laboratory accredited for the analysis of Industrial Hygiene and Environmental matrices by the American Industrial Hygiene Association, Lab ID 101533 - Accreditation Certificate #480. The laboratory is currently proficient in both PAT & ELPAT programs respectively.

Reservoirs has analyzed the following sample(s) using Atomic Emission Spectroscopy - Inductively Coupled Plasma (AES-ICP) per your request. The analysis has been completed in general accordance with the appropriate methodology as stated in the analysis table. Results have been sent to your office.

RES 96061-1 is the job number assigned to this study. This report is considered highly confidential and the sole property of the customer. Reservoirs Environmental, Inc. will not discuss any part of this study with personnel other than those authorized by the client. Samples will be disposed of after sixty days unless longer storage is requested. If you should have any questions about this report, please feel free to call me at 303-964-1986.

Sincerely,

RESERVOIRS ENVIRONMENTAL, INC.

NVLAP Accredited Laboratory #101896 AIIIA Certificate of Accredidation #480 LAB ID 101533

NATIONAL GUARD BUREAU ARMY NATIONAL GUARD REGION NORTH INDUSTRIAL HYGIENE OFFICE ATTN: NGB-ARS-IHNE 301-IH OLD BAY LANE HAVRE DE GRACE, MD 21078

NGB-ARS-IHNE

5 January 2007

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Dundalk Indoor Firing Range

- 1. An email dated 4 January 2007 from the CFMO stated that the Dundalk Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

NGB-ARS-IHNE

23 August 2006

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

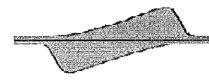

SUBJECT: Edgewood Armory Indoor Firing Range

- 1. An email dated 01 August 2006 from the CFMO stated that the Edgewood Armory Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsivent (410) 942-0273 x23.

Dear Customer,

Reservoirs Environmental, Inc. is an analytical laboratory accredited for the analysis of Industrial Hygiene and Environmental matrices by the American Industrial Hygiene Association, Lab ID 101533 - Accreditation Certificate #480. The laboratory is currently proficient in both PAT & ELPAT programs respectively.

Reservoirs has analyzed the following sample(s) using Atomic Emission Spectroscopy - Inductively Coupled Plasma (AES-ICP) per your request. The analysis has been completed in general accordance with the appropriate methodology as stated in the analysis table. Results have been sent to your office.

RES 95626-1 is the job number assigned to this study. This report is considered highly confidential and the sole property of the customer. Reservoirs Environmental, Inc. will not discuss any part of this study with personnel other than those authorized by the client. Samples will be disposed of after sixty days unless longer storage is requested. If you should have any questions about this report, please feel free to call me at 303-964-1986.

Sincerely,

President

RESERVOIRS ENVIRONMENTAL, INC.

NATIONAL GUARD BUREAU ARMY NATIONAL GUARD REGION NORTH INDUSTRIAL HYGIENE OFFICE ATTN: NGB-ARS-IHNE 301-IH OLD BAY LANE HAVRE DE GRACE, MD 21078

NGB-ARS-IHNE

23 August 2006

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Elkton Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the Elkton Armory Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive (410) 942-0273 x23.

23 August 2006

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Fort Ritchie/Cascade Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the Fort Ritchie/Cascade Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility. The work was accomplished using ADSW workers as a "self help" project. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsivent (410) 942-0273 x23.

Lead in water testing was not conducted in this facility. No significant areas of deteriorated paint were observed.

c. Lead in air. Personal breathing zone samples were collected from one person in Building. A and one in Building B. Both air samples were below the laboratory analytical detection limit for lead in air of 3.0 to 15.0 µg/m² as well as the Occupational Health and Safety Administration (OSHA) standard of 50 µg/m² for lead in air.

d. Lighting. Illumination levels were measured in frequently-used offices in Buildings A and in Classroom 24, Building B. The results are shown in Table 3. The Illuminating Engineering Society of North America (IESNA) recommends a minimum illumination level of 11-30 foot-candles (fc) for occasional visual tasks (such as locating tools and supplies), 31-50 fc for performing large-scale tasks (such as major vehicle repair operations), and 51-100 fc for tasks of medium contrast and small size (such as general office work). Lighting levels in Office 3, Building A; Offices I and 5, Building B; and Classroom 24, Building B did not meet these criteria.

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Glen Arm Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the Glen Arm Armory Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

23 August 2006

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Glen Burnie Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the Glen Burnie Armory Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

| 0630542 | MD02232006 | NAD | _ | _ | | | | | | | | -44 | | |

The following footnotes only apply to those samples which the total asbestos result is flagged with a note number.

- TEM RECOMMENDATION Pieuse note, due to resolution limitations with optical microscopy and/or interference from matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos. It is recommended that the additional analytical technique of TEM be used to check for asbestos fibers below the resolution limits of optical microscopy.
- MATRIX REDUCTION RECOMMENDATION Please note, due to interference from the matrix components of this sample, results which are reported via PLM as negative or trace (<1%) for asbestos may contain a significant quantity of asbestos which is obscured from view. It is recommended that the additional preparation technique of gravimetric reduction be performed on this sample to minimize the obscuring effects of matrix components, followed by reanalysis by PLM and/or TEM

Analysis Method - EPA/600/R-93/116 dated July 1993

NAD = "No Asbestos Detected"

01

TR = "Trace equals less than 1% of this component"

NATIONAL GUARD BUREAU ARMY NATIONAL GUARD REGION NORTH INDUSTRIAL HYGIENE OFFICE ATTN: NGB-ARS-IHNE 301-IH OLD BAY LANE HAVRE DE GRACE, MD 21078

NGB-ARS-IHNE

23 August 2006

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Havre de Grace Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the Havre de Grace Armory Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

Dear Customer,

Reservoirs Environmental, Inc. is an analytical laboratory accredited for the analysis of industrial Hygiene and Environmental matrices by the American Industrial Hygiene Association, Lab ID 101533 - Accreditation Certificate #480. The laboratory is currently proficient in both PAT & ELPAT programs respectively.

Reservoirs has analyzed the following sample(s) using Atomic Emission Spectroscopy - Inductively Coupled Plasma (AES-ICP) per your request. The analysis has been completed in general accordance with the appropriate methodology as stated in the analysis table. Results have been sent to your office.

RES 95719-1 is the job number assigned to this study. This report is considered highly confidential and the sole property of the customer. Reservoirs Environmental, Inc. will not discuss any part of this study with personnel other than those authorized by the client. Samples will be disposed of after sixty days unless longer storage is requested. If you should have any questions about this report, please feel free to call me at 303-964-1986.

Sincerely,

President

RESERVOIRS ENVIRONMENTAL, INC.

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5<sup>th</sup> Regiment Armory, 29<sup>th</sup> Division Street, Baltimore, MD 21201

SUBJECT: Prince Fredrick Readiness Center Indoor Firing Range

- 1. An email dated 22 March 2007 from the CFMO stated that the Prince Fredrick Readiness Center Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

associated with these samples.

N/A = Not Applicable

mg/Kg = parts per million (ppm) by weight mg/L = parts per million (ppm)

%Pb = percent lead by weight

ug = micrograms

ug/L = parts per billion (ppb)

Note: All samples were received in good condition unless otherwise noted.

Note: All results have two significant digits. Any additional digits shown

should not be considered when interpreting the result.

Air and Wipe results are not corrected for any blank results

on-Respons Technical Manage:

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar products. As a mutual protection to clients, the public and these Laboratories. this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from us. Sample types, locations and collection protocols are based upon the information provided by the persons submitting them and, unless collected by personnel of these Laboratories, we expressly disclaim any knowledge and liability for the accuracy and completeness of this information. Residual sample material will be discarded in accordance with the appropriate regulatory guidelines, unless otherwise requested by the client. NVLAP Accreditation applies only to polarized light microscopy of bulk samples and transmission electron microscopy of AHERA air samples. This report must not be used to claim, and does not imply product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government. MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5th Regiment Armory, 29th Division Street, Baltimore, MD 21201

SUBJECT: Queen Anne Armory Indoor Firing Range

- 1. An email dated 26 July 2006 from the CFMO stated that the two Queen Anne Armory Indoor Firing Range conversion/construction projects have been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses.
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Lead surface clearance samples were collected by an individual from Waste-Tron of Maryland, Inc. and analyzed by Caliber Analytical Service. Post clearing surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- 5. Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

MEMORANDUM FOR Maryland Army National Guard (MDARNG) CFMO, LTC Robert McCabe, 5<sup>th</sup> Regiment Armory, 29<sup>th</sup> Division Street, Baltimore, MD 21201

SUBJECT: Old Towson Armory Indoor Firing Ranges

- 1. An email dated 8 September 2006 from the CFMO stated that the Old Towson Armory Indoor Firing Range conversion/construction project has been completed. This was based upon a physical inspection of the facility to ensure that it met requirements of the contract. The NGB Region North Industrial Hygiene Office certifies that the surface lead dust was abated IAW NG Pam 385-16, Converting Indoor Firing Ranges to Other Uses
- 2. This project required the removal of the bullet trap, ceiling baffles and acoustical tile. Any items stored in the range were cleaned for surface lead dust prior to their removal. Surface lead dust was removed from all surfaces. Two coatings of lead paint encapsulant were used to cover the walls and ceiling. Vinyl tile was used to cover the floor.
- 3. This office collected pre and post surface lead wipe samples. The samples were sent to AMA Analytical Services, Inc. for analyses. AMA is an American Industrial Hygiene Association (AIHA) accredited laboratory. Post clearance surface lead wipe samples were below 200 micrograms per square foot as required by NG Pam 385-16.
- 4. Based on the email stated in paragraph 1 and the lead surface sample results, this area can be reoccupied as soon as possible.
- Please direct any questions regarding the conversion/construction project to the CFMO at (410) 576-6067 and questions regarding surface lead dust sample results to Ms. Non-Responsive at (410) 942-0273 x23.

This report applies only to the sample, or samples, investigated and is not necessarily indicative of the quality or condition of apparently identical or similar products. As a mutual protection to clients, the public and these Laboratories, this report is submitted and accepted for the exclusive use of the client to whom it is addressed and upon the condition that it is not to be used, in whole or in part, in any advertising or publicity matter without prior written authorization from us. Sample types, locations and collection protocols are based upon the information provided by the persons submitting them and, unless collected by personnel of these Laboratories, we expressly disclaim any knowledge and liability for the accuracy and completeness of this information. Residual sample material will be discarded in accordance with the appropriate regulatory guidelines, unless otherwise requested by the client. NVLAP Accreditation applies only to polarized light microscopy of bulk samples and transmission electron microscopy of AHERA air samples. This report must not be used to claim, and does not imply product certification, approval, or endorsement by NVLAP, NIST, or any agency of the Federal Government.
